I for one will not look thru my bifocals at a Technician licensee disdainfully or any other way nor did I in this case. Give me a lot of self-serving crap about Morse and I will resemble Vesuvius on a bad day. It is not necessary to attack a mode nor anyone who achieved the license requirements current at the time to justify one's reluctance to take a code test.

It is the rule and it will be the rule for five years anyway. To bleat around about it is sheer denial in motion which I will not enable nor be politically correct in response to what is not so much a provocation as an attempt to scratch on my furniture. I have no problem strangling cats to cure them of the habit and have even less reluctance to point it out to Lifer Techs.

What Amateurs support personally and severally will not have any ultimate effect on the debate. If you want to 'debate', call me up when you are not engaging in some activity trap designed to help you procrastinate. Like when you have the General.

But by eliminating [entry into] some of the license classes, it saves the FCC the overhead cost of adminstering them. (Renewals cost the same regardless of class.)

The only difference I have noted is as a volunteer examiner, we've (as in the other VE's and I) had some increased traffic from Jan. 2000 until about Dec. 2000, mainly for upgrades. As for the unlicensed, I'd say that the traffic flow due to them is relatively unchanged (and that makes some sense, since the rules for the NC-Tech. entry level license were relatively unchanged - just a shorter written test).

The only real difference I note for the unlicensed is for children age 10 and under. Most of them got their first license as a novice, not a no-code-tech. That's because the old element 2 was simple enough for them, but 3A was a bit more difficult. However, they could pass 1A and enter that way. No longer.

Culley,
I think your correct, most people learning CW for use
on the radio have no use for flash cards. That's a very
bad idea for 'audible' code. For 'visual' methods of using
CW (blinkers, etc.), it should be very useful.

I tried two: "The Little, Brown Handbook" (published, unsurprisingly, by Little, Brown) and "The Scott, Foresman Handbook for Writers" (published by--guess who?) Both say you're wrong; apostrophes can legitimately be used to form plurals of letters, numbers and symbols. So far that's three references versus the none that you've provided. So how about letting us know which "any English usage book" you're referring to?

> Or any English major

As long as the English major didn't graduate from, for example, Purdue University:
http://owl.english.purdue.edu/handouts/grammar/g_apost.html

X-FLARE: A powerful X-class solar flare
erupted near sunspot group 9393 on March
29th at 1015 UT. The blast sent a coronal
mass ejection (pictured right side in a SOHO
coronagraph animation on SOHO web) toward Earth -- the
second in as many days. The first of the
two incoming CMEs will likely hit Earth's
magnetosphere on Friday; today's
expanding cloud will arrive approximately a
day later, on Saturday.

Forecasters say there is a good chance (15-25%) of severe
geomagnetic storming when the CMEs strike.

Larry R, K3LT

Here the WT Docket #98-143 Comment of Cary Mangum, who has some standing
regard to the subject of emergency communications. Apparently, the
California emergency system has not enlighten by radio communications
wisdom.

Larry K, KC8EPO

~~~~~~
In The Matter Of 1998 Biennial Regulatory Review ï¿½ Amendment of Part 97 Of
the Commissionï¿½s Amateur Service Rules, FCC WT Docket 98-143

FCC Secretary Magalie Roman Salas
Office of the Secretary, Federal Communications Commission
1919 M Street N.W. Room 222
Washington, D.C. 20554

Public Service is the basis on which the amateur Service license has been
authorized since its inception. This is the aspect on which the commission
is urged to focus, and which we here address, as follows: (1) license
privileges and classes, (2) testing requirement (code), (3) RACES Station
licensing, (4) Amateur operation.
~~~~~~

Background And Basis

Since 1985 California has had an aggressive program utilizing Amateur licenses. That year the state legislature mandated a paid staff coordinator with directions to enhance and expand that public service function involving amateur licensees. In April 1985 we began a series of education bulletins statewide at a time when there but three RACES units in the state. Today almost all of the 58 counties have an emergency communications unit based on the Amateur licensees; and our weekly EMCOMM Bulletins have would-wide distribution in addition to every state in the country.

In so far as we know, our program ï¿½ the leader in the nation ï¿½ is the only one with a paid staff position created by the state legislature to support the use of Amateur licensees in service to their communities.

In 1987 the American Radio Relay League requested that the statewide Bulletins be placed in the Amateur packet radio networks around the U.S. In time they became the standard in the US, replacing s defunct FEMA education program. Today these Bulletins are the source of education information for emergency communications units based on Amateur Radio. They are literally on hundreds of bulletin boards and Internet sites around the world.

Because we are involved daily with quintessential public service ï¿½ their use in and for local government, we have a broader experience of Amateur license activities that than most petitioners. Our program is the recognized model in the U.S., Canada, Australia, New Zealand, England and other countries worldwide. The weekly EMCOMM Bulletins are on the worldwide Web at www.acs.oes.ca/ . Our Manual, titled the ï¿½establishing and maintaining an Emergency Communications unit for governmentï¿½, is the only one of its kind in the country.

(2) Testing Requirement (4) Amateur Operations

In the 1990ï¿½s very significant changes have occurred affecting the usefulness of Amateur radio licensee to government. Today we face information systems that did not exist in the past. As we look to the year 2000 we need Amateur licensees capable of providing a variety of services in communications, typically computer based.

Thus, the use of code has declined to where it is no longer viable for government.

a. California eliminated the use of CW some years ago. Although we have a large and extensive communications center staffed for and with Amateur licensees, we had not used CW in decades. We retained a CW net until 1995, but it served no essential purpose, just once-a-week training for 3-5 participates. No county governments participated for years.

b. The US Coast Guard also eliminated the use of morse code several years ago, which is further evidence of its lack of applicability to todayï¿½s communications needs.

Today, our information systems are based computer based and operate by both wire and wireless. If the Amateur of today is not familiar with computers

he/she is of little use. A background in computer experience and knowledge is far and away more important than that of CW.

When I became licensed in 1941 Amateur radio was the means of alternative communication. Today, the computer provides that, hence thousands of those who would otherwise be FCC Amateur service licensees never apply because the service does not attract them. Until we recognize that factor the service will not grow significantly, nor do we get the new blood of technically oriented people to spark the new innovations so badly needed.

To make matters worse, to a large degree an ï¿½old-boy networkï¿½ exists in Amateur radio; one that grew up with ï¿½you must pass the codeï¿½ concept. Like people everywhere ï¿½whatï¿½s good enough for me is good enough for youï¿½ is the mindset of many of todayï¿½s Amateurs. Without the ability to look to the future, or grasp the many changes occurring around them, they would keep practices long since useless. In government today we pass data digitally, not by CW or voice radio. In fact, there are government agencies who seek to do away with radio entirely.

One of my constant battles is to keep some radio capability functioning in government. There is a new breed of administrators who focus on the bottom dollar, not redundancy. Often they have no experience in communications failures, and their digital computer networks have not failed. They see no need for radio. So, they no longer fund or support radio programs. The federal Highway Authority (FHWA) is one instance of an agency that no longer supports High frequency radio. Itï¿½s a very real every-day battle. Our fiscal year has just begun and yesterday I was informed that there are no funds for communications equipment as it all went for computer systems.

So, I urge the reduction of code requirement to 5 wpm at general license level as it is not essential skill qualifier in todayï¿½s world. When it is possible to do so under international radio regulations, I further urge the Commission to drop the CW requirement entirely. It is not relevant to the year 2001 and subsequent real-world needs in communications.

(1) License Privileges and Classes

The proposed classes (no-code Tech, General, Advance, Extra) are appropriate. There is a shortage of people above the tech license interested in emergency Communications. It has been the Tech licenseeï¿½s that have made our programs possible. Without them the programs would flounder. There are exceptions, but in general it is the Technician licensees we rely on today. Due to the shortage to those qualified to operate HF we have to put a higher qualified licensee with them just to staff HF circuits.

I urge the Commission to adopt a requirement of computer ability, at least at the general level. Knowledge of technical digital information is not important. There may be those who will assert that test should include questions on Amtor, Pactor, Clover or such. The problem there, however, is that such modes are already out-of-date. To lock the testing into them is already a decade behind the times. What we need is young minds open to new

possibilities, not old minds locked in decades old minsets. There are enough computer specialist around that itsï¿½ easy to find them and they donï¿½t need Amateur licensees to fix technical problems. In fact, it is their interest in the technical aspect of computers that have draws them away from Amateur radio.

I recommend that the licensee demonstrate the ability to use a computer; that is, demonstrate operating ability in word processing program, in a text-editor, how to use eMail and how to use communications programs. These are skills that need demonstrating in person, in lieu of the code test. It will be difficult to have multiple choice or yes/no questions to uncover these skills. Have the applicant demonstrate ability on his/her computer or one by owned by the examiner. Itï¿½s not too difficult to set such a standards as it is required of countless job applicants these days. An alternative is some of certification by a computer user group as to demonstrated skills.

(3) RACES Station Licensing

I urge that the provision for RACES station license be dropped. Few exist. Those that do should not be renewed. With todayï¿½s easy availability of callsigns, the purpose of calls for government EOCï¿½s is simple. Here we formed a club to support the state activities and got licenses for each of the stateï¿½s regional EOCï¿½s. Itï¿½s not quite the same, but it works.

The disadvantage of the RACES station license is a provision in the current regulation that has been misapplied. (see.......) This provision should be dropped. Specifically, that section states that a Races Station (defined in ....) cannot talk to another RACES station. Legally that means two RACES stations LICENSEE. However it has been interpreted to mean that any Amateur licensee operating in the RACES (mode or activity) cannot talk to any Amateur licensee operating in a non-RACES activity. For instance, during the 1970ï¿½s a FEMA employee critized one of our California amateurs for allowing a Amateur operating in a RACES activity to call and talk to an amateur for a club (non RACES) who had telephone capable of solving a need. The FEMA person did not understand that it only to a RACES station licensee.

"73" comes from the old landline telegraph days. It was one of a number
of "stock" messages, used to save time and effort in sending a message.

Now, knowing that, would anyone REALLY expect them to add to the length
of the comment?

Again, the only point that we can concede to is that your book says it CAN be done. In point of fact, in true professional work, it's NOT done, simply because it doesn't meet accepted style. And on that same point, going back to our original discussion, various users guides may also say, for example, that "A is comprised of B and C" is in use. The better guides will also say, however, that that form isn't acceptable in the formal sense. It's reading the fine print in users' guides that count, Jon.

Further, this gets totally away from the argument we started with. Whether to use an apostrophe to indicate 73's (vs. 73s) isn't the question! The question was whether "73" should indicate both the single and plural form. Several articles over the years in QST concluded that it would. For to say "73's," they concluded, would indicate "best regardses."

Yes, 73's and 73s both say that in the literal sense.

I usually say seven three instead of seventy three. That's too long in
CW. :-)

> comprised of B and C" is in use.

Red herring. We're discussing the use of the apostrophe to form plurals of letters, numbers and symbols, not the use of the word "comprise." All the comprised's you care to cite are beside the point.

> The better guides will also say,
> however, that that form isn't acceptable in the formal sense.

Please name the "better guides" to which you refer.

> It's reading the fine print in users' guides that count, Jon.

Please cite the fine print, Vince.

If you are saying that the flashcards will have either the words 'dah dit'
or 'dit dash' or if it is in the form of ' _ .' etc.. then the problem
is still there.

Forget the flash cards. Use the ear method, unless you are handicapped,
which you have not mentioned.

Of course if you are only interested in doing 5 wpm (why bother) then the
flashcards will work. Probably....but you wont get much faster.

>ac6xg

OK, but in the professional world it would be written "73s." The developmental style has to do with words not looking awkward or confusing the reader as to possessive form versus plural. That's why one writes "the CPUs work at 800 MHz," not "the CPU's work at 800 MHz." Or, "the LEDs operate at 5 mA," not "the LED's operate...." If one ever sees the latter form, it's an oversight on the part of the writer, or the writer needs an overhaul.

> with your quark.

As if you see an undergrad engineer get anywhere close either ... they are
all masters or doctors ... undergrads count screws for 'em.

CEO's are businessman ... not developpers

From what i have seen of your history ... none of your presidents have been
much more than something for every nut bag in the country to rally behind
when they call for war.

>And yet, I provided several examples from leading newspapers
>where that form is used repeatedly.

Then it's a writer/copydesk oversight, or the writer/copydesk needs an overhaul. As I mentioned, one writes "the CPUs work at 800 MHz," NOT the "CPU's work at 800 MHz." There's good reason for that style: one is, you don't want to confuse the possessive case with the plural form. That's how good professionals deal with the issue.

In the same timframe the NYC repeater wars were in full bloom. Those
suckers put 4-5 qrp jammers per target input freq on the air up on the
utility poles around the rptr sites. Batteries were not an issue, they
tapped the pole pig output lines. Some of 'em included white noise
generators. The DFing exercises to end 'em all.

Presuming that you have no handicaps, like all have said, forget about
any "aids" that depend on reading. Think about it: CW is mostly about
hearing sounds that you quickly (and, later, automatically) interpret as
letters or words. Use AUDIO aids instead of anything that you read or
memorize. The fellows are telling you exactly right: the use of "read-
ing" aids will only add to the learning process and hinder your learning
of CW. There are a variety of tapes available to progressively move
you along to 5, 10, or faster speeds. Also, DO NOT touch a sending key
at all. The objective is to learn the sounds thru practice. One day,
you will reach the point where you automatically hear the letters/words
without having to "think" about it. It becomes like a second language.

So the writers/copydesks at the New York Times, Washington Post and Chicago Tribune all need overhauls? You should let them know.

You're ducking the question. Again. You've asserted that it's incorrect to use the apostrophe to form plurals of letters or numbers. While that's your opinion, it's demonstrably not the opinion of the leading professionals, nor of any reference work cited. Your opinion is unsupported by any documentary evidence. When asked to cite references, you are unable to provide any.

Good professionals apply style in context rather than relying on hard-and-fast rules that do not, in fact, exist.

>Hopefully, such a poll would be better designed than the 1996 one. But I'm NOT
>talking about polls, surveys or newsgroup posts. I'm only talking about
>comments and other communication to the FCC. That's what really matters.

Yet even in the NPRM comment phase, the FCC didn't
ask for such an absolute stand to be put forth. For most
commentors the issue before them was 5 wpm test vs
5, 13 and 20. There was nothing in the NPRM that suggested
the FCC would even entertain ending all testing. NCI
did make that position and we encouraged supporters to
clearly state that. That was at least two months after many
people already filed comments supporting ARRL's
position.

>>>>Why not make the Morse code proficiency exam a requirement for all Federal

>
>The same can be said for any mode or regulation. How many hams use EME? SSTV?
>Satellites? Far fewer than use Morse - but those subjects all have a place in
>the written testing. Not as a single element, of course.

EXACTLY!!
End the separate test element and add some theory questions
about code and then the morse (as a knowledge aspect)
is truly on a par with the other modes.

>The fact remains,
>though, that in order to get the license, I and many others had to learn all
>sorts of stuff that we never use on the air.

But nothing as a single subject area gets the attention
and focus that code has. Less today because of the
end of 13 and 20 wpm, but still an unjustifiable weigting
in the overall perspective.

Cheers,
Bill K2UNK

What is I told you to recite your ABC's? Obviously, I haven't told you how many times to recite the alphabet, just to recite it at least once. Therefore, "'s" doesn't always suggest plural.

Okay, in that case you can use thermonuclear device. However, you'll have to limit it's yield, say perhaps to a small tactical device capable of taking out a smaller town instead of the whole city. :-)

> Although, some would say this becomes
> borderline genocide. Like shooting fish
> in the barrell. Like working DX in nets.

Well, that might be true. Of course, it depends on what you're shooting at. My brother-in-law uses an assualt rifle to keep the bears and coyote (wolves, or whatever they are) away from his farm animals in Wyoming. Of course, it is also effective for smaller animals also - he can't hit them, but the sound, and dirt flying up from nearby hits, is enough to scare the holy heck out of them.

> Holy crap, which part of the country do
> you live in? East LA?

Not at the moment (my mother-in-law lives there, though). No, its fairly peaceful where I'm at now, so I mainly use my guns for target practice at the moment. However, when I move (yes, I've been saying that for a year), I intend to move a little further in the woods, and would appreciate having a good weapon around (just for my own peace of mind).

Absolutely well written, W6DKN. The problem is not guns, or the cars used for joy riding, or the street corners used to sell drugs, or anything else beyond the people involved. Until attitudes change, and we end this seemingly endless tolerance to everything subversive to civilized society, the problems are simply not going to stop.

Vince, I have to agree with you on that...but the example isn't quite good for this group. "Real Hams" only work CW on HF and HF is below 30 MHz. "Real Hams" despise modern things like computers. "Real Hams" will hardly ever go above the 70 cm band (and then only with a borrowed HT), certainly not up to 800 MHz. :-)

Morse code is a living zombie in regulatory matters concerning
amateur radio licensing. Feel free to walk with the living dead.

If you want to pretend to be, or have papers, signifying you
are a Master of English, meet the test of SELLING your
word works to an editor, sight unseen except for the works
themselves. If you want to pretend that apostrophes are
"correct" in plural forms (when it is not common practice
among those who edit printed words), you can rationalize
that you are "evolving" English. That won't be true but...

...good luck on this one now.

It would seem that Extra class licensees are automatically
the highest-grade at English language authority? I don't
think so.

From these sources - "Webster's New World Compact School
and Office Dictionary," Prentice-Hall, 1989; "The Chicago
Manual of Style," University of Chicago Press, 1985; "Style
Manual" from the U.S. Government Printing Office, 1980, et
al, the apostrophy indicates (primarily) a POSSESSIVE but
(secondarily) can indicate missing letters in a contraction
[e.g., "can't" for 'cannot'] but only rarely can it be used for
showing certain coined plurals such as "Did you mind your
p's and q's?"

By common convention among editors (those who do the
final test of acceptance of purchased word works), the
plural of the telegraphic equivalent of 'Best Regards' is just
73s, no apostrophe.

This is about the only time I will agree with Vince
Biancomano and that only on style of American English.

Now why all this endless prattle on non-amateur-radio-
policy subjects when it is obvious that it has nothing to
do with radio, amateur radio, or government matters
regarding any licensing?

Take all this down the hall to the door marked "All who
consider themselves Masters of English and are right."
It's far, far down the hall. Good day.

SSB is *zero* efficiency when conditions are too poor to copy, but CW
will still get through.

Only a very small percentage of hams ever find the need to use their
stations
foremergency use. I guess you mean that they're all wasted then.

But of course a MESSAGE, perhaps needed to be sent on CW in very poor
conditions which OFTEN accompany disasters, could bring food and water
to the needy survivors. Of course no such scenario could ever penetrate
your granite skull.

Not too surprising, since you're not a very accomplished CW operator,
one who can copy down into the noise. You may have a better than average
program but that isn't saying much. My personal experience with seversal
versions of DSP has been a disappointment. I expected it to work well,
and it plainly does not.

The trade would be by/with the FCC, not other users. The Amateur Radio
Spectrum Protection bill that has been kicking around in congress for a
few years says something to that effect, not that it will ever actually
become law.

The both of you missed the point entirely. Dick McCullom was aiming at Leland who is still whining about the 5wpm code test, which will not go away for a few years yet, and nothing anyone can do will change that. Leland whines on anyway, citing reams of homemade "case law".

No one's taking your guns away, Dick. If we lived in a perfect world where everybody's happy and friendly and lovey-dovey, there would be no need for firearms, but sadly this will never be. Until then, it will take a majority of Americans to amend the Second Amendment, and it's not happening in our lifetime.

Anyway, 73 to you and Dwight and everyone else taking part in this gun-free exchange. I'm QRT.

> become law.

The FCC does not own any spectrum, but they are more or less a combination of the Wall Street and
Judge Judy when it comes to spectrum assignment. The Wall Street part of them would like to auction off every Hz to the highest bidder, and the Judge Judy in them would like to make everybody happy while collecting a large salary. Since this is irreconcilable, we have a problem,
and that problem is an increased pressure on our bands. Now, the real owner of the bands is actually everyone and no one, which means that regular Joe Sixpacks eventually may get to determine the fate of amateur radio (indirectly, of course - whoever heard of Joe Sixpacks running the country; that's what we have politicians for). As a matter of fact, "our" bands are
not at all ours, since we have already stated that everyone owns the spectrum, and the ham-radio
population happens to be a very small percentage of the US (and world) population, which means
that Joe Sixpacks don't give a rat's behind about us and our perceived needs. Therefore, if there
is no strong, organized and unified effort of the entire ham-radio population, the spectrum will
start to disappear no matter how many no-code licenses are given out and no matter how many VHF
radios are sold. By far the best vehicle for such an effort is always a national ham-radio organization, which in the US happens to be the ARRL. That is why it is my belief that every US
radio-amateur should support the ARRL in one way or another, even if he/she differs

philosophically with it in some or most other issues.
I haven't even begun to address the problem of the international scope: the HF spectrum demands
of the developing countries. The WARC and ITU will not so much as glance at petitions coming from
any sources other than recognized national ham-radio organizations. The FCC can only go so far
within the limits of the international agreements, so the real battleground is actually outside
of the US soil.

And now I rest my case.

73 ..... Zoran

>the rest of
>us in the 21st century.

Active languages also go into decline, Hans. It is not a mutually exclusive proposition. That's why we still have people saying "A is comprised of B and C," instead of "A comprises B and C." That's why we still have people saying "The amplifier has an input capacitance of 5 pF and it's gain is 20 dB." (Instead of "its" gain). You'll find that sort of stuff all over newspapers nationwide, every day of the year. With each 'evolution' in language, there's another contingent trying to make it sloppy.

Regards,
Vince, WB2EZG

Don't look now, but the Second Amendment has already been essentially
repealed. Am I free to bear arms inside a US Post Office? A lot of
the federal gun laws are unconstitutional.

It's more than tolerated, it's *used*, and by leading publications.

That's because neither they nor I are trying to apply a "rule" to all cases, as you are. You argue that since "CPUs" is used rather than "CPU's" that "50s" must be used rather than "50's." That mindless insistence on a rule is what's wrong with your position.

Jon

Nope, that's not the point. Emergency preparation is left up to the
individual ham. The government doesn't even require an RF transceiver.
Why, then, should it require Morse code skill? If Morse code skill is
seriously required for emergency communications, one would think an
RF transceiver would also be a required necessity.

1506. CW or CPR?

Newsgroup: rec.radio.amateur.policy
Date: 2001-03-30 13:22:54 UTC
From: Larry Klose <lklose@net-link.net>
Message-ID: <3ac488c0$0$88181$bbae4d71@news.net-link.net>
Source record: 5805

Some of you argue that CW proficiency examinations are necessary for emergency communications, and that CW knowledge will save lives. I have maintained proficiency in medical first aid, CPR and AED for 27 years. I used those skills many times to assist injured people, some with life threatening conditions. While I often use VHF radio communications, I have never seen a situation that needed or warranted CW communications.

In your life experiences, which proficiency will save more lives, CW or CPR?

Larry KC8EPO

The point is, Dick, if they stored food and water, they wouldn't need CW.
If Morse code is required, why isn't food and water storage required?
Why isn't an RF transceiver even required? It makes absolutely no sense
to require Morse code skill and not require any RF equipment to go along
with it.

Thank God! You had better hope and pray that those in power are never able to convene a Constitutional Convention again. With the current beliefs and attitudes of many in Congress these days the Second Amendment is not the only thing that would be at risk. The First Amendment would be right behind it, and then the Fourth, etc.

A Constitutional Convention is the single most dangerous thing that the current crop of politicians could do. The aftermath would be the end of the United States as we know it...

1511. Still More Best-Of Vince Biancomano Rebuttal Quotes

Newsgroup: rec.radio.amateur.policy
Date: 2001-03-30 13:43:04 UTC
From: pschleck@novia.net
Message-ID: <3ac48cbf$0$5199$45beb828@newscene.com>
Source record: 5810

An interval of about every 6 months seems to be best for posting new editions of this list. At that time, Vince's posts, and rebuttals to his posts, have been voluminous enough to put together a nice collection of new quotes. The first two editions can be viewed at:

http://www.novia.net/~pschleck/vince/

The following quotes were taken from rec.radio.amateur.policy from late 2000 to early 2001. All are presented without internal modification (including correction of spelling errors), but have been trimmed from the original posts for brevity.

"> No, May 1965 QST has the Docket.

Oh. Thanks for the clarification of your citation. I must have been thinking of the other citation you use.

So now I'm off to the flea markets to hunt for a May 1965 QST to find out if the opinions of people who haven't run the FCC for 35 years bear any resemblance to the Commission's present view of the Amateur Service."

- Jim Kelley, AC6XG

"Again you want to relive a 35+ year old docket to justify your claim while ignoring the current and most recent R&O which appears to in no way sustain your argument."

- Bill Sohl, K2UNK

"No doubt the FCC is just doing as they were ordered to by the Bilderberg Group. Or was it the Trilateral Commission?"

- Jon Bloom, KE3Z

"> That's why there
> was a petition for reconsideration that basically picked the
> Commission apart, like a John Unitas two-minute drill.

Yep, and that petition was just as effective as a present day John Unitas two-minute drill."

- Cecil A. Moore, W6RCA

"Whatever makes you happy, Vince. But when I turned on the radio this morning, there it was - still there on 40 meters; amateur radio. You must be thinking of something else."

- Jim Kelley, AC6XG

"So they will do what they want, but 20 years after deciding to eliminate the amateur service they have yet to get it eliminated? That makes no sense at all."

- Jon Bloom, KE3Z

"Seems to me, Vince's false hope is that the ARS has already gone away."

- Cecil A. Moore, W6RCA

"The world according to Vince: The FCC has no allegiance to anyone, is on a 20-year mission to destroy ham radio, and is unable to figure out how to write a response that says: 'Nothing new here. Dismissed.'"

- Jon Bloom, KE3Z

"So the organization that feels it can do what it wants, owes allegiance to no one and feels that those reasons make it necessary to protect its public image double speaks in its Report and Orders so that you can see the Big Lie?"

- Ed Hare, W1RFI

"So the organization that says and feels whatever it wants and owes allegiance to no one is senstive to the policital nature of Amateur Radio and wants to protect its public image by... Man, this has gotten so convoluted I can't even type it.

Let's just say I think you are dead wrong and let it go at that."

- Ed Hare, W1RFI

"Oh now I get it. They 'know enough to keep quiet' so as to keep from getting 'nailed' because Congress has a 'history' of wanting to 'dumb down' amateur radio operators until they can no longer fix or even use their radios. And by then they'll be so stupid that the radio fairies can come right down and take away all the radios. And the FCC can finally sell the spectrum to Kenwood. And Vince can finish smoking the rope the FCC supplied.

The End.

So let it be written, so let it be done, thus spoke Biancomano."

- Jim Kelley, AC6XG

"I predicted they'll say: 'Nothing new here. Dismissed.' I also predict that when they say that, you'll claim they're REALLY saying something else that only you truly understand."

- Jon Bloom, KE3Z

"Are you criticizing the FCC for not being dictatorial and for working with the infrastructure it is regulating?"

- Ed Hare, W1RFI

"> a Commission-to-Amateur Radio relationship doesn't exist in a vacuum.

Should it?"

- Jon Bloom KE3Z

"If Vic Clark said it was impossible to arrest the evolution and
development of the ARS, he was a smart man and you should listen to him,
Vince. If he said that it was possible to arrest the evolution and
development of the ARS, then he wasn't so smart."

- Cecil A. Moore, W6RCA

"Do you believe that is less effort to study the 200+ page Now You're
Talking and a 400-question pool to enter ham today than it was for me to
enter ham radio by studying a 4-page study guide?"

- Ed Hare, W1RFI

">I've known 12-18 Extras who never learned Ohm's Law,
>by their free admission

Vince, I find it hard to believe that 12-18 Extras would freely admit
that to you. Your attitude towards these new hams has not been one that
I believe would engender such confidence.

I am curious, though; is it 12, or 18? Why the uncertainty?"

- Ed Hare, W1RFI

"Oh, wait... it is either one or a trillion of them. Glad we didn't
bring any extremes into this discussion. :-)"

- Ed Hare, W1RFI

"Why can't they be like WE were... perfect in every way. Musta' been
that long walk to school..."

- Ed Hare, W1RFI

"Humorous post, Vince. Irrelevant, but humorous. The mind works in
mysterious ways.

Here's what actually transpired:

Jon said:
> >Please give an example of a simple Ohm's law problem.

You said:
> One example:
> For Technician, a bona fide (non-trivial) series-parallel
> resistive network would do, where it's going to be an advantage
> to at least once have to determine an equivalent resistance in
> order to solve the voltage or current across/through some element
> within the network. For the higher classes of license, you'd want
> to have at least one resistor in a diagonal configuration.

Jon said:
>Okay, so it's a DC network analysis problem. How about we call
>it that from now on so people won't think we're talking about
>Ohm's Law when we're really talking network analysis?

You said:
>That would depend on whom you want to scare. 'Network analysis'
>to many implies engineering-grade knowledge and the parlance that
>goes with it.

Jon said:
>Well, if you want hams to be technically astute, having them
>learn what terms actually mean is certainly worthwhile.

You said:
>Whatever your wish. To me, it's an Ohm's Law problem.

Then I said:
>I don't know if it's entirely accurate to call an equivalent resistance
>problem, an Ohms law problem.

Then you said:
>I haven't.

And ever since then, you've been going around in circles. Well, not
circles really. More like lissajous figures or a Mobius loop."

- Jim Kelley, AC6XG

"Actually, I find that conversations with Vince bear a remarkable
resemblance to a Klein bottle:
http://www.sff.net/people/asaro/klein.html#bottle"

- Jon Bloom, KE3Z

"This is the sort of thing that gives mindless pedantry a bad name."

- Gore Vidal

"> No, I didn't tear into you, Jim.

'You'll have to troll alone tonight.'

'Keep praying for that break, Jim. Have another drink.'

'If you had a case, you'd have made it. Indeed, if you had a case,
you'd also be able to spell the word 'blatent' correctly with a
straight pen.'

Then please explain how these statements relate to ohms law, and support
your assertion."

- Jim Kelley, AC6XG

"Apparently, (Biancomano) believes that it is sufficient merely to assert."

- Gore Vidal

"Would you mind telling us what planet you are from, Vince?"

- Cecil A. Moore, W6RCA

"So you say. If it isn't something that has been published by the ARRL or posted here, just how does anyone have a clue as to what your 'details' really are?"

- Bill Sohl, K2UNK

"Another non-answer. Humor me, Vince, please answer the question even if you are repeating yourself. I don't remember you offering any 'real-world consequences' before. Seems all I remember are imaginary deluded consequences."

- Cecil A. Moore, W6RCA

"That's a mouth full of unspecified jargon. You offer not one practical example of what/how you'd accomplish your goal...and you again avoid answering the fundamental question..."

- Bill Sohl, K2UNK

"Vince is asked for copies of all of this documentation, even offered 25 cents a page for reproduction. Vince refuses, stating (paradoxically) that his revealing such evidence would made it LESS CREDIBLE (as if it's more credible unrevealed?) because he could be accused of doctoring it. This is reminiscent of Vince's refusing to prove Fred Maia's 'women and children' quote unless Fred denies it in writing (Fred says that he doesn't recall)."

- Paul W. Schleck, K3FU

"Mr. Sumner probably didn't want to come right out and say that they have a specially shaped file for Vince's documents."

- Jim Kelley, AC6XG

"I found that the kill file worked wonders in 'understanding' Vince. ;)"

- Jim Rosenthal, WA4STJ

"No explanations are necessary for statements one extracts from the nether regions of their anatomy.

'I believe it, ergo it is fact' is the operative phrase here."

- Fred Hambrecht, W4JLE

"Oh, and by the way, which of your opponents for Hudson Division Director made that quote which you paraphrased as:

'you know, there's no reason for Amateur Radio to be a technical hobby today, simply because there's no jobs for engineers. You know, my father was a plumber, and advised me to do the same. Looking back on it, you know, he was right.'

?

The individual who defeated you four times says that his father was not
a plumber, and nothing resembling such a statement was made by him."

- Paul W. Schleck, K3FU

"Vince, you remind me of a friend of mine. When I asked him what
He would do if his wife caught him in bed with another woman,
he answered, 'I'd just deny it.'"

- Cecil A. Moore, W6RCA

"If anyone out there thinks Vince answered ANY question in full I'd like
to hear from you."

- Bill Sohl, K2UNK

"Oh, God, Vince. Are you *still* around whining? Sheesh, you love
being miserable don't you?"

- Kim Walker, W5TIT

Of course, CPR has saved many lives, but how many lives has the use of CW saved over the years? Many, many more I would think. A minimal proficiency in CW would certainly be a benefit and not a detriment to the hobby. I don't believe it has to be all or nothing. I maintain a proficiency in HF voice communication and procedure for the same reason.

With my work with Red Cross (Canadian) as well as when I'm on the road,
never once have I ever felt the need to tap away at the keey when an
emergency arose. The people I would be looking for help from would in fact
be close enough that voice communications on hf would be quite satisfactory.
Never once have I asked for help from a distant station in timbuktu. What
would be the point?

Furthermore, at home or in town; why wouldn't I simply call for help on the
phone or cell? Would be far more efficient!

No Vic Clark this time. The closest I can get to a suitable quote
on the previous subject under discussion is this:

"Biacomo (Biancomano), I jumped out of an airplane yesterday
without a parachute! Does it matter? Boyzzzz, you just can't get
a decent job done today!

I think lids, kids and space cadets are fine if they want to use ham radio. They, like all the rest of us, should have at least a smidgen of civility and behave accordingly on the air (and in the newsgroups). "Do unto others, etc. etc."

Somewhere along the line, the quest for "free speech" seems (at times) to have devoured the responsibility for common decency.

When you are not face to face, it seems that anything goes. When the fear of a punch in the nose is removed, the tongue loosens, inhibitions disappear, and insults start flying. Not unlike the effect of a half-dozen beers.

I'm a Cowboy, not an Indian. :-) And Robin Hood would probably have traded
his bow and arrow for my SKS with a 30 round magazine full of armor-piercing
ammo. Can you imagine the king's armored knights charging Robin Hood equipped
with an SKS?

I don't think so. That's what Kelly WANTS to be the "bottom line."

The biennial restructuring of ALL FCC rules and regulations is simply one more step in the evolution of ALL radio regulations, amateur radio included. FCC 99-312 (the R&O) brought US amateur radio a bit closer to the reality of today's US amateur radio.

There is a constant among those with the long-timer/old-fart/Lifer mentality: All the major regulations should remain the same as when They became licensed...and they will continue to advocate that as long as they continue to view the avocation in their own personal terms. There is absolutely nothing but personal preference in such a viewpoint and that "p-p" is totally against the wishes of the amateur community at large or the desires of those who might want to get into that hobby.

I can provide several examples in the March 30, 2001, editions of
the Los Angeles Times, the New York Times, the Wall Street
Journal, all of which contain at least one typographical error.
I would consider those three to be "true professional work" insofar
as journalism is concerned.

I can start listing a few hundred titles of professional work which
are in front of me as I type this (in 39 lineal feet of book space),
but that would not settle the argument. The argument has settled
into the "I'm right and you're wrong" sort of heckling.

>Red herring. We're discussing the use of the apostrophe to form plurals
>of letters, numbers and symbols, not the use of the word "comprise." All
>the comprised's you care to cite are beside the point.

Your last sentence should have been written "All the compromises you
care to cite are beside the point." :-)

>> It's reading the fine print in users' guides that count, Jon.
>
>Please cite the fine print, Vince.

The "fine print" (metaphorically speaking) is in the TEST of
whether or not an editor with red-mark your copy, thus
pointing out mistakes. Real Writers pass such TESTs every
time they submit something to editors.

If you wish to align yourself with K0HB's "evolving language"
(which does not, apparently, have to follow "rules"), then here

is an example of a word found in this morning's Los Angeles Times: "Amped" rather than "amplified."

Amusing in regard to the rigid, set-in-everlasting-concrete "rules" of amateur radio jargon, style, and even opinion. Anyone differing from such rigid rulemaking is obviously not a "Real Ham" nor can they ever be one. :-)

>
>So are you going to provide a reference or are you pulling this
>stuff out of your posterior like your 50-year old quotes?

The written word is a form of communications. There are rules
for style/syntax of English. Those rules are used by those
who accept or reject written words that are communicated on
paper or on screen to hundreds and thousands of others. Such
is the "test" that is met every day by writers of all kinds, amateur
or professional. The "test givers" are the editors.

The argument on style under this thread has bogged down into
some rather selfish insistence of "being right originally" in regards
to the apostrophe indicating a special plural form. While some
publications accept that special case of "73's," the vast majority
of editors and publishers will go for a more mundane plural "73s"
with no apostrophe. Rationalization of use of an unacceptible
style form in a newsgroup as "being correct" by personal insult
of another does not make such rationalization "correct."

What is interesting is the VERY RIGID stance on form and style
in amateur radio must be preserved at all costs, yet someone's
personal style of the written word is now "correct" simply because
they used it. What is wrong with "live and let live?"

1531. Re: CW or CPR?

>
>Of course, CPR has saved many lives, but how many lives has the use of CW
>saved over the years? Many, many more I would think.

Unproven except that such is your opinion. Please provide as many
examples as you think necessary to enforce the FCC regulations
requiring a morse code test for an amateur radio license...for the
FCC's purpose of regulation.

Please note that modern emergency communications involving life-
saving services use VHF and UHF Public Service bands, not HF
bands. [the Titanic sank in 1912, some time ago...]

>A minimal proficiency
>in CW would certainly be a benefit and not a detriment to the hobby.

Then let it be optional in USE, not part of the license test. Amateur
radio is NOT primarily a public safety radio service.

>I don't believe it has to be all or nothing.

This is a definite change in Macy's stance of the past.

>I maintain a proficiency in HF
>voice communication and procedure for the same reason.

Why not include a "proficiency test" at amateur radio bands above
HF?

It's remarkable that, on reaching middle age, the "wisdom" of
life experience of some individuals suddenly decides that the
world is going to hell and "things were so much better when
I was young/younger." :-)

Until the attitudes of Real Hams change, and we end this
seeming intolerance of non-morse-coders, the problems of
amateur radio policy arguments against amateur regulation
changes is not going to stop.

No, not to purists. Under such conditions, they could say:

B and C COMPOSE A; or alternatively,
A IS COMPOSED OF B and C. Or, turning it around,

A COMPRISES B and C.

The general rule is that the whole comprises the parts,
and the parts compose the whole.

> It's 'bout 10dB more effective than ssb. You'll be dead & gone before
> the last ham cw qso.

Actually, you mean you can hear a signal that is 10dB weaker. Efficiency has nothing to do with it. Fact is the average cw'er is around 12wpm. You speak and type far quicker than that. Not to mention more information is carried per watt in a ssb transmission.

> Don't know history either, huh?

Who developped calculus? Who developped theories on EM and optics? Who practically wrote the book on QM? Who is developping theories on elementary particles?

They were all physicists. Engineers take our texts and copy our info to design products.

> That's astute. Go back to 10m Son.

I operate on the lot of the HF bands, not simply 10. 10 is dead.

I seriously doubt that. In the last decade there has not been
any lifesaving CW episodes. How many people did CPR save during
that same time? Probably hundreds or maybe thousands.

There may have been a day when CW saved many lives
simply because CW was the ONLY mode in use for such
situations. That is simply no longer the case.

>A minimal proficiency
>in CW would certainly be a benefit and not a detriment to the hobby.

If you stated that as being on a voluntary basis I'd have no
argument. The facts, however, to support your statement as
a mandatory test requirement don't add up.

> I
>don't believe it has to be all or nothing. I maintain a proficiency in HF
>voice communication and procedure for the same reason.

Those that want to can and should be free to maintain CW
proficiency. I support you on that...BUT not on mandatory
requirement for same.

Cheers,

You obviously have a computer, so training software is the way to go. One good
resource is:

http://www.ah0a.org.

Also take a look at N0HFF's excellent online book at:

http://www.raes.ab.ca/book/index.html

Covers all aspects of learning and using Morse in detail - and it's free!

>ing" aids will only add to the learning process and hinder your learning
>of CW. There are a variety of tapes available to progressively move
>you along to 5, 10, or faster speeds.

I agree 100 % with all of the above. Charts, flashcards and other visual
devices cause all sorts of problems in learning aural Morse.

All sorts of Morse training freeware is available, too. Surf over to

http://www.ah0a.org

and download Morse Academy, for an example.

Also, don;t make the mistake of thinking you have to learn 5 wpm forst, then
slowly progress to higher speeds. Set the character speed to 15-18 wpm and the
word speed to about 7-8 wpm to start. Avoids bad habits like "counting dits".

> Also, DO NOT touch a sending key
>at all.

I DISAGREE!!! Learning to send HELPS you learn to receive! Get a decent
straight key and oscillator and spend about 10-20% of each practice session
learning to send.

>The objective is to learn the sounds thru practice. One day,
>you will reach the point where you automatically hear the letters/words
>without having to "think" about it. It becomes like a second language.

Precisely. Although it's not a "language" in the sense that French or English
is, once you get the skills developed you find yourself understanding Morse
directly.

Our 'local' multi-county Skywarn, OEM, NWS and ESDA have 2M, 440 and 220 rigs set up. Not a single HF rig...Not one key....No antenna for HF... This includes 13 counties that I know of and work with. Wow. Since I'm only a nocode tech I guess I shouldn't be helping save any lives because I don't know CW...Guess I should just 'resign' my "position" (voluntary positions that they are) as assistant Skywarn coordinator. I'll also let our nocode coordinator know and we can go back to where we were when NOT ONE CW tested "ham" would take the responsibility. Like back in 1990 when a F5 tornado took 120 lives over a period of an hour and NONE of the 4000 trained spotters (many of which were "lifesaving, CW" tested hams) bothered to make a report to the NWS and when those same "lifesaving, CW tested hams" couldn't be bothered to operate a Skywarn net. I guess they were all busy using CW to save someone in Eastern Kookamunga and didn't notice the F5.

OK, and so what? It's certainly not important enough to be criticizing a fellow amateur radio operator over such a technicality. And by the way - I still use "handle" for "name" sometimes. I learned that on the amateur radio bands, BEFORE 11-meters was converted from an amateur radio band into a CB band. What amateur radio does NOT need are stuffed-shirts and know-it-alls who go around correcting new hams and old timers over matters that they don't know the history on, and matters that don't really matter. 73, AK

"Pay-to-Pay" (e-file) is not the smart way.
If only IRS were really a "service" ! AK

John, I was referring to the official nomenclature. Umm ... F2A? Dipped if I know. Where the heck is the handbook? I know it has to be F something (probably 2 since it used to be F2). Now you know how much the standards have been lowered. I didn't study (at all) and passed (from ground zero) the extra in 1993. Having also passed the extra in 1966, I assure you the tests were not easier back then.

>Unproven except that such is your opinion.

Weeeeellll, Lennie, we can START off in 1912 and move forward. April, 1912 to be specific. (I am sure you have some first hand "Back in ...." story, so I will say now you can save it) Of course that was several HUNDRED people saved at one time. We could cite hundreds of other situations in which Morse Code has "saved the day".

As for CPR, I can tell you with certain professioanl knowledge that even "text-book perfect" CPR delivered in a timely manner is NOT always successful. As a matter of fact, it still only has a recovery rate of approximately 12-22%.

As recently as the 1970's Morse Code was still being used for (real) distress situations, and the reluctance of many other countries to NOT delete Morse Code is proof that it's service last's into the 21st century.

>Then let it be optional in USE, not part of the license test. Amateur
>radio is NOT primarily a public safety radio service.

No, it's not, but it's ability to provide a level of emergency communications is it's PRIMARY validating factor in Part 97. I know you know this, and ignore it, but it's there. It's law. It's in writing. It's the hole in your sinking rants.

>Why not include a "proficiency test" at amateur radio bands above

Len, I think you may be mistaken on the old timer syndrome. Certainly, there are a few folks who are dismayed by the lowering of the CW requirements. I certainly don't have a problem with that. I have even seen it in print where some folks suggested retesting the old timers. I wouldn't have a problem with that - been there, done that. After 23 years of inactivity (and no license) I simply tested out. No problem, even with the 20 WPM CW test. With the direction the tests are taking in difficulty, I doubt any old timer would be frozen out. In any case, I will take your suggestion as to letting the folks who wish to get into the hobby set the requrements under advisement. In any case, I will try and keep my future QSOs at a more understandable level for any of these folks.

Good numbers to ya, good buddy, from Rochester, NY

The "seeming intolerance" exisits only in YOUR mind, Lennie the Useless.
"RealHams" are actively involved in REAL Amateur Radio activities and know that
your assertions are the babblings of an idiot. A well spoken idiot, but an
idiot none-the-less.

And you ARE an idiot, Lennie. Pure and simple.

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

And you falling into that category would have a personal perspective?
Based, of course, on all of your years of PRACTICAL experience in the Amateur
Radio Service, as a member of the ARRL, or a participant in ASSORTED Amateur
Radio activities...???

>All the major regulations should remain the same as
>when They became licensed...and they will continue to advocate
>that as long as they continue to view the avocation in their own
>personal terms.

Ooops....evidence that supports MY contention that you are without a
clue....A statement made without the slightest clue as to what REAL Amateurs
are doing/saying about ANY aspect of Amatuer Radio.

Of course I know you will cite the on-goings in THIS forum, but as has
been mathematically proven before, the "representation" of ANY opinion in this
NG AT BEST could be less than 1/4th of 1% of the Amateur census.

>There is absolutely nothing but personal
>preference in such a viewpoint and that "p-p" is totally against
>the wishes of the amateur community at large or the desires of
>those who might want to get into that hobby.

I see...Every American is supposed to adjust thier own personal
preferences to satisfy YOUR desire for an Amateur License without the benefit
of taking the currently required examination.

Cowardly creep.

Dick:

No, that's just a typically "Cecil" point of view. Excluding the one
time I did use my CW skill in an emergency, I would never say that
that learning the code was a "waste" of my time, effort, or anything
else. Remember -- this is about laziness -- nothing else. The
entire NCTA is simply about justifying laziness. And for most
people, it's a lot easier to make excuses than to dedicate themselves
to learning and gaining amateur proficiency in a valuable communications
skill.

No, just simple, astute observations. Any reasonably intelligent and
computer-literate person should be able to find the information you sought
without having to ask for a handout on Usenet. I used the Internet for
80% of the research I did during my recent college studies, and never
once did I have to ask anyone for any help. BTW, I received "A's" on
all my papers except one -- which involved no Internet research at all. I
got B+ on that one. If I could do this, you should be able to find out how
to renew a ham license without asking for a URL handout.

>

Jerry:

This is bad advice. Learning how to send the characters helps to learn
how to receive them. The act of making the sound of the letter "C"
helps to drill that sound into your memory-reflex system. I did not
break out of the 10 WPM "plateau" until I built my first iambic keyer-
paddle combo and started sending perfectly formed characters at
higher speeds. Sending and receiving are inter-related skills which
can and should be learned simultaneously.

Culley:

Uh, don't look now (literally) but the Morse code is definitely NOT
something that lends itself to being learned with flashcards. You need
to learn how the Morse characters sound; memorizing dot-dash
configurations visually is the wrong way to go. Code tapes,
computer programs, and over-the-air practice are the only way to
ensure quick, easy learning of the code, and the ability to progress
beyond 10 WPM. My guess is you'll hear this advice a lot; but that's
only because it is true. Please do the world a favor and eighty-six
your Morse "flashcards."

Hey, Kim-- why not do a little learning while you're resting sometime?
CW has
saved a great many lives over the past century, not the least of which
was the 1500 survivors of the Titanic. There have been many other
similar cases. Yes, we know, today there are other modes of choice, and
for darn sure, anyone in possesion of their senses will use them - if
they are available. If not, then you would advocate just letting nature
take its course instead of using CW?

Dick

Of course you missed the entire point. When one has to use gear which
requires you to learn how to copy code in extreme QRM conditions one
adjusts and learns how to do it.
Your computer doesn't have a chance to learn how to do that.

Yep. There was a day when CW was the best option for emergency
communication. Prior to that, there was heliograph, but I don't think
that the Army is teaching that anymore, either.

So then you really believe that the phone and cellphones will always be
there for you. Right.

No one has ever suggested you give up anything at all. The point is
that when you can use CW too you have another tool in the survival
toolkit.

Short memory, or just selective, again? On the very last day that
500Khz
CW was used, a ship imn distress off England used SOS on CW to effect
its own rescue. That was only a couple years ago.

Yes, I know that isn't "ham radio". You are reminded that in a
lifesaving situation that distinction is moot.

>are doing/saying about ANY aspect of Amatuer Radio.

Far more "clues" here than there...except for the old-tyme religion that epitomizes morse code testing.

Hint: The FCC authorizes US amateur radio licenses. The FCC does not require either staff or commissioners to have amateur radio licenses to regulate US amateur radio.

> Of course I know you will cite the on-goings in THIS forum, but as has
>been mathematically proven before, the "representation" of ANY opinion in
>this NG AT BEST could be less than 1/4th of 1% of the Amateur census.

Robeson "knows" nothing of the kind.

> I see...Every American is supposed to adjust thier own personal
>preferences to satisfy YOUR desire for an Amateur License without the benefit
>of taking the currently required examination.

Again, Robeson "knows" nothing of the kind...but Robeson insists on retention of the morse code test in the license examination because he had to take one.

The rest of Robeson's message is the usual personal insult:

> Cowardly creep.

The morse code test may be Robeson's "test for manhood."

Robeson should, but seemingly cannot, explain on civil terms why the morse code test should remain forever and ever to be used as a test for newcomers to amateur radio.

BOYCOTT KENWOOD!

Confirmed Anti-Coders!

Here is an equipment manufacturer lobbying the FCC to drop CW testing.

This is a quote from Federal Communications Commission REPORT AND ORDER
Adopted: December 22, 1999

Released: December 30, 1999

By the Commission: (The entire document can be viewed in plain text at
http://www.fcc.gov/Daily_Releases/Daily_Business/1999/db991230/fcc99412.txt
)

28. ... Kenwood states that licensing of persons because they are
proficient in Morse code is inconsistent with encouraging those
interested in modern telecommunications to join the ranks of amateurs
and become skilled in the technical sciences. ...
29. On the other hand, several commenters equate passing a telegraphy
examination to the type of on-the-air operator a licensee will be, proof
of skill level, or emergency communication capabilities. Kenwood,
however, states that Morse code telecommunications is not a skill used
often in emergency communications or disaster relief any longer. Other
comments express a personal preference for exchanging messages with
other amateur radio stations using telegraphy. While Kenwood agrees with
these observations, it states, however, they are not a sufficient
justification for keeping Morse code proficiency as a licensing
requirement. ...

NO CW TEST means CB.

And only CBers would want to eliminate the only thing keeping ham
radio from becoming CB. It is high time for firm action to save ham
radio from the CBers and the lobbying profiteers. (The FCC mentions
"Kenwood" in a policy-making action eleven times!!)

Since Kenwood has now entered the political arena, they are now subject
to political response. WE DON'T NEED KENWOOD!

DO NOT BUY KENWOOD GEAR!

SIGN YOUR CALL WITH "BOYCOTT KENWOOD!"

Jim,
According to the 12th edition of the FCC rulebook of the ARRL, they've changed the terminology in part 97, and now use the term MCW, for example in section 97.305, "Authorized emission types", but they define it in 97.3 (c)(4) as

MCW. Tone-modulated international Morse code telegraphy emissions having designators with A,C,D,F,G,H or R as the first symbol; 2 as the second symbol; A or B as the third symbol.

The terms F2A and F2B are the ITU designations, and they mean telegraphy, for aural reception, and for automatic reception, respectively.

I guess that means that if I receive someone's signal with a morse interpreter program on my computer, I've forced their emission from A to B. :-).

Gee Len, you're an old fart but not a radio amateur. Please don't lump
those of us who have been licensed hams for decades in with the old
farts of the general population. The major failure in fact of your
latest musing would be that the amateur community at large is mostly
amateurs who have been around for decades. Your *desire* as a non-radio
amateur has little to do with anything. I *desire* many things that
I'll never achieve unless I apply myself toward obtaining them. Those
who might want to get into amateur radio might have to meet the
requirements rather than bleating about the inequity of it all.

>20 WPM CW test. With the direction the tests are taking in difficulty, I
>doubt any old timer would be frozen out.

I made absolutely no comment about chronological old-timers. [difficult to do when one is such a chronological contemporary]

All I am advocating is the elimination of the morse code test for any class of amateur radio license. That sort of thing results in outright angry hostility by a number of pro-code-test advocates who insist on keeping what myself and many others call a "hazing ritual."

The technology of radio has advanced far since I first began in it 49 years ago and, in the course of a career involving radio and electronics, I've had to keep pace with that advance. As I see it, many in US amateur radio want to keep the avocation frozen in the standards and practices of the 1930s or late 1940s. That includes keeping amateur radio licensing in that same time frame, preserving morse code in a sort of "living museum" as if that is the main skill that any radio amateur should possess. To what end for a hobby?

>In any case, I will take your
>suggestion as to letting the folks who wish to get into the hobby set the

>requrements under advisement.

Right now the FCC sets the regulations for US amateur radio. Neither the staff nor the commissioners of the FCC are required to learn morse code or test for any amateur radio licenses. The FCC says publicly that it will accept input on regulation changes from any citizen. There exist a rather large number of us citizens who are not licensed in the US amateur radio service yet are quite competent in radio technology, radio operation, radio theory, and electronics in general.

I do thank you for your civil support. It is an agreeable even pleasureable sight to see someone who will not insult or demean someone simply because they have differing opinions.

>In any case, I will try and keep my future
>QSOs at a more understandable level for any of these folks.

That is how it should be in a civil society.

The problem is that many licensed radio people insist on forcing their personal hazing rituals on newcomers. US amateur radio is not a public safety radio service nor is it a military radio service nor is it any kind of occupational radio service. It is defined as a radio activity carried on without pecuniary compensation, the primary reason for using the word "amateur."

There should not be any reason to think that an "amateur" is demeaning...yet many amateurs will not hesitate to demean professionals. You have no doubt seen evidence of that in here. Such goes on off-line as well.

>Good numbers to ya, good buddy, from Rochester, NY
>Jim AA2QA

Thank you and the same in return, sincerely meant.

> Your computer doesn't have a chance to learn how to do that.

Dick, before showing off your ignorance again, I suggest you learn
something about adaptive signal processing. These techniques are
routinely used for separation of speech signals from background
noise. It would work even better for CW.

Virtually all uncorrelated noise could be removed from a CW signal
using adaptive DSP filtering. A computer can indeed "learn" while
doing. AI and fuzzy logic could probably also be applied to CW.
The reason that it hasn't been done for CW is that there
are coding methods much superior to OOK/Morse.

Rose said 1500 people went into the sea that night.

Heck, the National Enquirer says they're still picking up Titanic survivers out of the water. A couple years ago they found the captain, and earlier this year they found a baby! I bet they've got a great bar there at the Enquirer. :-)

And you believe that in an emergency with adrenaline pumping and having to
run back and forth between a client and the radio that you would tap out
legible code?

> No one has ever suggested you give up anything at all. The point is
> that when you can use CW too you have another tool in the survival
> toolkit.

But thats the thing ... because it is forced upon op's to learn it isn't
merely a tool that you should learn but is unnecesary ... but a vital part
of hf comm's.

I don't even carry a key in the car for my 706 for the most part ... and you
still didn't rebut my point that the stations you would be asking for help
would be local enough that voice comms would work fine.

When I go for my nightly drive home from work for a couple hrs (when I do actually toss the 10m antenna on the car). Outside locals, I hear a bunch of americans preaching parts of the bible. 20 40 or 80 are plenty better in the car.

Sure it is. But the Republicis a better example.

> CW could have
>saved the rest but didn't.

How could "CW" have saved them, Cecil?

>Why do you think the people in the
>lifeboats would not have been saved without CW?

Because the ship which rescued the people in the boats (the Cunard liner
Carpathia) was summoned by the mode.

Most of those who died in the Titanic disaster died of exposure and
hypothermia, not drowning. Those in the boats were better off than those in the
water, of course, but they they would not have lasted very long in the cold.

It's really all a matter of opinion. What matters is that the FCC has decided that voluntary is the way to go. Right or wrong, that's the future.
>
>> I
>>don't believe it has to be all or nothing. I maintain a proficiency in HF
>>voice communication and procedure for the same reason.
>
>Those that want to can and should be free to maintain CW
>proficiency. I support you on that...BUT not on mandatory
>requirement for same.
>
For many many years there has been no requirement to maintain proficiency in anything in order to keep the license. Only requirement is to stay out of trouble and keep sending in the correct forms at the correct time.

I support having as many tools in the toolbox as possible. That means proficiency in as many modes used by amateurs as possible.

It is my understanding that if the Titantic CW operator had been a
little less arrogant, the California CW operator might not have given
up in disgust and gone to bed. I think it was on a TV documentary where
it was reported that the California had CW traffic to pass but the
Titantic CW operator ordered him to QRT.

Were any survivors plucked directly from the water by the Carpathia?
I'm not trying to be difficult. I just don't know the answer.

Don't you mean "feasible" instead of "possible"? Can you run SS? All modes
are possible including some that are used by three hams worldwide. :-)

Wrong again, Lenny. Tsk tsk, you'll never get it right. They're required to *review* the rules every two years, not "restructure" the rules every two years. You think maybe they're gonna put themselves thru dealing with a "restructuring" NPRM every two years? They streamlined the ham regs in a number of respects well beyond just the code test thing simply to reduce their administrative expenses, period. And the current set of rules will remain in place for some number of years per their usual practice. Some bureaucrat will flip thru the ham regs every two years and say "Ayup, reviewed, next?"

I disagree on this one narrow point- the whole point of amateur radio communications, or most of it, is to discuss the mode and means of communicating!

oh? more than one you say?
care to cite the source?
c'mon Roger, this is an old game you're playing and all the tricks are well known.

So far as I know, I received 1 letter on account of a single complaint and it
turned out that
I was not in violation at all (receiver equipment had a defective filter). so, the
complaint
was dismissed... this was in 1993.

Other than that, no other complaints OF ANY SORT were filed against me
(that I know of). I was involved in a case where a bootlegger used my
call on numerous occasions on the VHF and HF bands in an attempt to harass
me or otherwise generate harassment by inciting others to write the FCC.
He was eventually caught (the FCC V. Timothy Harold Hoffman <or also
known as "The phoenix jammers case">).

so, I have 1 complaint of record that was dismissed and listed as
satisfied... can you say that, roger?

Sorry, your Lofty Highness, it is very much an issue.

Witness your own intolerant remarks as a bona fide PCTA.

>Why should the policy arguments against amateur regulation changes
>stop? The policy arguments for amateur regulation change haven't
>stopped.

...nor should they.

Heil has a perfect right as a citizen to voice his grievances, a
guarantee of our First Amendment. Heil's only problem is that
he cannot confine his arguments to the subject but must
personalize his comments to others based on Heil's opinions
of those who do not "measure up" to his lofty standards.

All of radio has evolved over the decades...with a considerable
amount of mental foot-dragging by certain amateurs who wish
to have everything remain the same as when they were
qualified. If Heil had to qualify his amateur standing by taking
a code test, then all newcomers must take such a code test.
He has Spoken.

>Yep. There was a day when CW was the best option for emergency
>communication. Prior to that, there was heliograph, but I don't think
>that the Army is teaching that anymore, either.

The sinking of the Titanic happened 89 years ago. Radio as a
communications tool was only 16 in 1912. In 1912 radios on
board ships consisted mainly of spark transmitters with crystal
set receivers. With such "radio equipment" the only feasible,
practical mode of communications was on-off keying.

Field communications in the US Army prior to 1912 consisted
of manual semaphore flags during the day and torches at night.
The torch and flags remain as the collar insignia of the Signal
Corps today...in memoriam since those modes were long since
dropped as doctrine in the field.

The US Army still teaches morse code at Fort Huachuca, AZ,
but as part of military intelligence operations training, NOT as
a communications method. MI techniques are taught to all
US military branch and government personnel at Fort
Huachuca.

The worldwide standard for maritime emergency communications
is now GMDSS...approved by the same international body that
still maintains international morse code testing for radio amateurs,
the ITU.

Every generation has its share of middle-aged critics who insist
that "things were better in 'my' day...and can 'prove' it." :-)

Their 'proof' is predicated only on personal achievement and the
irritation against those who will not worship their accomplishments
as Strong and Mighty. It is seen in here on a regular basis. :-)

> "This seeming intolerance?" Boy, I must have missed something in
>what I wrote.

All of these public postings are not necessarily to the individual
quoted. Do not get upset or "personalize" someone else's replies.

It is demonstrateable fact that PCTAs in here are intolerant to those
who are against morse code testing for an amateur radio license.
Some are downright aggressively hostile and (nearly always)
attempt misdirection of the subject through personal insults against
NCTAs any which way they can. QED.

Forgive me, revered licensed person. I was unaware that amateur
radio physics was different than the physics of radio in every other
radio service. [perhaps that difference is taught at UCI? if so, it is
worthy to take such courses to see this major breakthrough in
physics?]

Forgive me again, most esteemed qualified licensee, but the FCC
still does not require staff or commissioners to be licensed in
amateur radio service in order to regulate it. Further, I see nothing
in the entire body of Title 47 that prohibits citizens from commenting
to the FCC in regard to radio regulations of any radio service.

Feel free to correct me (I no longer read the Federal Register cover
to cover) on radio regulation changes that prohibit US citizens from
open, public comment. On anything.

Pepper pot word useage correction noted.

>You think maybe they're gonna put themselves
>thru dealing with a "restructuring" NPRM every two years?

Such is a continual, evolving process in all radio services at the FCC. Some radio services have already been restructured while others have been simply modified. At least three other radio services are presently awaiting comment on current NPRMs.

>They
>streamlined the ham regs in a number of respects well beyond just the
>code test thing simply to reduce their administrative expenses,
>period.

No, not just for "administrative expenses." The US amateur radio license class system had grown into the most complex class-distinction system in the international amateur world. Six classes were brought down to three.

The "reduction of administrative expenses" had already been accomplished by the privatization of ALL operator license testing well before the mandate of biennial reviews.

>And the current set of rules will remain in place for some
>number of years per their usual practice. Some bureaucrat will flip
>thru the ham regs every two years and say "Ayup, reviewed, next?"

Kelly has missed a rather thorough set of reasons for change given in 99-412, the R&O doing a large change in Part 97. The stage was set for much of that in the 90-55 R&O that created the no-code-test Technician class.

Since there have been over 2500 Comments on the 98-143 NPRM (visible to the public), the FCC did not do some cavalier, flip

dismissal of reasons for change and noting all the pros and cons expressed by citizens.

You may not like the changes or comments, but that is not any valid reason for such a simple dismissal of the FCC's actions.

>Now go find another vent for your drivel Lenny, the code test thing is
>worn out, dead and buried. Better luck with your next jihad.

There has been no burial, no services for the dead in regards to the "code test thing." It exists, it will be brought up by some adminstration at WRC-2003 and, hopefully, placed into the ITU-R WRC agenda in 2002 by a Working Group.

Kelly seems to think I speak ill of the dead. I do not. I do not see it, "the code test thing," as something that should be worshipped ad infinitum and forced upon all newcomers to amateur radio.

That is an important factum for all radio amateurs?!?

Does that make Kelley more "qualified" to speak for the US
amateur radio community?

How does that apply to the recent restructuring of Part 97, Title 47
CFR?

1619. Re: Restructuring -- did it make a difference

In article <3AC55E93.55470803@ovis.net>, Dave Heil <k8mn@ovis.net> writes:

>Gee Len, you're an old fart but not a radio amateur.

True...I've been a radio professional too long.

>Please don't lump
>those of us who have been licensed hams for decades in with the old
>farts of the general population.

Flatulence is easily detectable in opinions.

>The major failure in fact of your
>latest musing would be that the amateur community at large is mostly
>amateurs who have been around for decades.

There is no "musing" about Heil being a PCTA, a mental old fart,
an amateur conservative who opposes change.

>Your *desire* as a non-radio amateur has little to do with anything.

It is not just my desire, but rather a large group of others who
have been held back by the flatulent, conservative long-timers'
insistence on keeping the status quo.

Unless there has been some major revolutionary changes in the
US Constitution, ordinary citizens can and have commented to
their government in regards to ALL laws, regulations, and rules.

Heil's "desires" seems to be that of trying to act as a sort of
spokesperson for all of amateur radio. In reality, Heil is merely
one voice of a US citizen, but one who wishes to appear as a
"leader" of the amateur community's lodge hall.

>I *desire* many things that
>I'll never achieve unless I apply myself toward obtaining them.

How does that moral-ethical viewpoint of acceptance of status
quo make Heil "superior" to all others? A fact of jumping
through hoops established by chronologic very-long timers is
only evidence of having jumped through hoops.

>Those
>who might want to get into amateur radio might have to meet the
>requirements rather than bleating about the inequity of it all.

Those who have jumped through old hoops are fully expected to
demand that all newcomers do the very same thing...to "measure
up" to their exhaulted, "superior" accomplishmentss. The

problem is that the FCC regulates US amateur radio, not some wanna-be ex-officio "leaders" in the group of already-licensed amateurs. Up until the FCC relinquishes their regulation of amateur radio ordinary citizens of the US can freely comment to the FCC whether or not the ex-officio "leaders" think they are "qualified" or not.

The FCC has stated publicly that it does not consider a morse code license test relevant to their task of regulating amateur radio in 1990 and in 1999. [they are required retain that test by ITU-R S25.5] Does Heil think the FCC is "not qualified" to regulate US amateur radio?

I am all or nothing person, Dick. Like or not, doesn't change the way I am. My point is this: CW is *not* the only life-saving method available to "we" hams. If "we" are going to use the argument that "we" need CW to save lives--and use it also as an excuse to sit on a high horse as "we" delude ourselves by thinking "we" are degrading and humiliating those who choose not to like the mode and choose not learn it to whatever extent "we" think they should, then "we" should also set the example and be proficient at every single mode there is to ham radio--each of which has the same lifesaving potential.

If "we" just simply want to sit on a high horse and think "we" are better because we know something that others don't, or that "we" learned something others did/have not--then quit raising CW to some level of sainthood because of its capabilities while "we" ignore the potential for other modes.

To answer your question: Yes, if being prepared to you means that I must be proficient at every possible option to save someone's life. If it does not mean that to you, then you are rather weak in your argument that CW should be revered and respected because of its potential to save lives--because you don't have the same regard that every mode that can save lives should be learned and tested in order to be licensed.

In other words, Dick, your attempt to laud the worthwhileness of CW so that your arrogance of knowing it can be waved over all our heads is pretty damned weak.

Hey Dick,

Please show us on a year-by-year (or decade by decade)
basis the number of lives saved by CW. Me thinks it is a
slippery slope in your wishful thinking.

>There have been many other

But who, what and where have they been over the last 40 years.
Please refer to request for quantitative data above.

Cheers,
Bill K2UNK

My recollection of the data discussed on one of the history
programs was that less than a dozen of those in the water
were saved. They froze to death very quickly...minutes.

That's true, but the reality of historical data doesn't support
the idea that there is even an occasional such situation.
The reality for US hams would be that we'd be more likly
to save another life if we had VHF and/or cell phone
available.

>communications is it's PRIMARY validating factor in Part 97.

Even if that's true (it isn't by the way, it is but one of several
reasons for the ARS as stated in Part 97.1), the use of CW
in ALL emergency comms has ended. I have yet to see one
example of where CW use is still being integrated into any
emergency preparedness effort by any recognized public
or amateur group.

>>Why not include a "proficiency test" at amateur radio bands above
>>HF?

>
> Why not get a license?

Why not answer the question? It goes to the hypocracy
of having code testing for HF but not VHF when most all
safety/emergency comms are actually done via VHF as opposed to HF.

> Please refer to request for quantitative data above.

It's obvious that CW has saved many lives in the past and will save
countless more in the future. While not precisely quantitave, an
example calculation will show this important property of the mode.

Assume that 1,000 immigrant women were rescued from the Titanic's sinking
in 1912. They arrive in America, marry and give birth to ten children
each. That's an additional 10,000 lives saved by that one emergency CW
contact over the next 7.5 years. Assume that each of the 10,000 children
grows to maturity over the next 30 years and sires or births 10 children
of their own. By the beginning of WWII, that one CW QSO will have saved
111,000 lives. By 1970 that number will have increased to 1,111,000 lives.
And by 2001 (now), it stands at 11,111,000. By the close of the 21st
century, it will be 11,111,111,000. That is to say that every third person
on the face of the Earth will have been saved by the CQD sent from RMS Titanic
in 1912!

Ain't that wonderful? Mr. Turd "knows a word". He must be taking a class or something on so-called "smooth brain disorder."

I wonder if they taught him the difference between magnetic resonance imaging and proton magnetic resonance? Longitudinal and transverse relaxation times? Electron spin resonance and nuclear magnetic resonance? Nawwwww.

Technicians are never really taught physics. They just think they know something.

Know what, Zoran; I give up.

There are people who are thoughtless drones, no matter how hard you hit them with a hammer. Charles is one of them. He doesn't care about usenet and he doesn't care about other people's interest in this fabulous medium. He sees it as the perfect place to run his adv^H^H^HSPAM and think that it's just great.

He behaves like the simplex idiot who is too stupid to grasp the concept of split operating. In that vein he is unable to grasp the concept of a text based, ad-free and multicultural environment that has been designed to discuss ideas, not to promote ridiculously bad designed and contentless webpages. He laughs at people who think that his fullquotes, referenceless drivels are a waste of conceptual bandwidth.

Let him have it his way. Let him be happy in his dysfunctional way of not understanding what 2-way communication at its best can be. Let's leave him alone and pray for www.usenet2.org where mindless people like him will never have a place.

John F. "Jack" Smith, Jr., became chairman of the General Motors board of directors in January 1996.

As chairman, Smith is responsible for building strong relationships with GM's various business partners, unions, dealers and governments around the world. He also works with external business groups and is a liaison between the board and GM management.

Smith also served as chief executive officer from November 1992 to June 2000.

He was president from April 1992 to October 1998, and president and chief operating officer from April 1992 to November 1992.

From Aug. 1, 1990, to April 6, 1992, Smith served as vice chairman with responsibility for international operations. He previously had been executive vice president in charge of GM's international operations since June 1988.

Smith was born April 6, 1938, in Worcester, Mass. He received his bachelor's degree in business administration from the University of Massachusetts in

1960, and a master's degree in business administration from Boston University in 1965.

Smith joined General Motors in 1961 at the Fisher Body plant in Framingham, Mass. He transferred to the New York financial staff in 1966 and was named an assistant treasurer in September 1974. In February 1976, he was named an assistant comptroller on the financial staff in Detroit.

On Aug. 1, 1980, he was named comptroller. He became director of worldwide product planning in Detroit on Feb. 1, 1982. He was appointed president and general manager of General Motors of Canada Ltd. and a GM vice president on Jan. 9, 1984. On Feb. 1, 1986, Smith was named executive vice president of GM Europe-Passenger Cars, in charge of operations and engineering, and was appointed president of GM Europe on April 1, 1987.

Smith is a member of the Procter & Gamble Co. board of directors, chairman of the Economic Club of Detroit and chairman of Catalyst. He is a director of Detroit Renaissance and the U.S.-Japan Business Council. He also serves on the board of trustees of the United Way of Southeastern Michigan.

Smith is a member of the American Society of Corporate Executives and The Nature Conservancy board of directors. He is president of the Beta Gamma Sigma's Director's Table, a member of the Chancellor's Executive Committee of the University of Massachusetts, and a member of the board of trustees at Boston University. He has been awarded honorary doctoral degrees from those universities as well as Providence College, Michigan State University, Kettering University and Holy Cross College.

he is such an engineer

Certain requirements are necessary but lots of things can be left
to the discretion of the individual citizen. Choice of ice cream
and choice of modes in amateur radio are a couple of those things.

Why indeed? I certainly would use the best method of communicatioins
available in an emergency, as anyone would. The operative word here is
"available".
You know, you don't always have the luxury of choosing the mode that
will be used. What if you're on a SSB emergency net following a disaster
and someone calls in on the net using CW with emergency traffic? Should
he just go soak his head because he doesn't have some better mode
available?

By the way- you may have passed a CW test somewhere at some time, but
clearly you're not a CW operator. No CW operator would speak of "tapping
away at a key". No one but a rank novice would think of sending code
that way.

>SIGN YOUR CALL WITH "BOYCOTT KENWOOD!"

Robert:

Boycotting Kenwood because they're making a desperate attempt to
preserve their sliver of a dying amateur radio equipment market is
stupid and a waste of time. If I worked for them, I'd probably say the
same things they did about the Morse code. Even as an avid pro-
code testing advocate, I'm not going to condemn Kenwood for this.
I am, however, going to condemn the FCC for taking their arguments
seriously, not seeing through their business agenda, and not making
the decision based on what is best for the ARS.

If you want to start a movement to do something about the code
testing issue, I suggest you urge concerned radio amateurs to write

to their Congressional representatives, making a strong argument in favor of retaining the pre-2000 standard in code testing, and insisting that they do anything in their power to restore our licensing standards. After all, the United States is a free, sovereign nation -- and even if the ITU Treaty code testing requirement is removed, we can still do exactly what we want from a standpoint of code testing. All we need is a government with a backbone.

Kenwood's piddling piece of the action in HF ham gear sales is not the issue. Anyway, they're offering the incentive of a free Heil Goldline microphone with every HF rig sold, so the no-coders will be flocking to the local candy stores to buy 'em. Don't worry about Kenwood. They're small potatoes. BTW -- you'll notice that their HF rigs usually have great CW features. If they're so anti-code, you'd think they would delete the CW mode from their rigs.

Actually, I was referring to the fact that you have a brain like a rat:
smooth and with no frontal lobes. I was not referring to it as a disease,
but that it was an evolutionary difference between you and myself.
Your branch of the tree went off in a somewhat different direction to
mine so to speak. Mine went the way of superior brain capacity, and
yours the direction of the honey badger.
>
> I wonder if they taught him the difference between magnetic resonance

That is the first thing you have EVER written that has a modicum of accuracy,
the answer is no. However, you don't need that kind of specialized knowledge
to determine lissencephally and basic brain morphology. You need only
discriminate between Pavlovian behavior and higher order cognition.
>
> Technicians are never really taught physics. They just think they know
> something.

So are you implying that you actually KNOW these things, or did you just
look them up on "whatis.com"? If the latter is the case just take the magnet
and shove it up your ass, if the former is the case I applaud your insight into
the differences in depth of knowledge between technician vs. physicist,
but what is your point? Ahh, you might as well just shove the magnet and
the coil up your ass anyway.

No, Cecil, there were not enough lifeboats on the Titanic for the
others.

> Why do you think the people in the
> lifeboats would not have been saved without CW?

????Where you been? Without CW on radio there could have been no
communications with other ships, so none could have been summoned to
pick up the shivering survivors. One DID come when called, and effected
a rescue before -most- of the surivors on the lifeboats froze to death.
The others, in the water, were not so furtunate.
(This was way up north where it is cold even in July. When I sailed
that route I came out on deck on July 4th to find an inch of ice
covering everything).

Yes- if better procedures had been in place, the radio op on the ship
that was within sight would not have turned off his radio and gone to
bed not long before the SOS was sent, and probably all would have been
saved. That isn't the fault of CW.

If thats all he has i see no problem... but get real ... name a rig that was
built in the last 20 years that would still be in use today that didnt have
ssb.

My, My. Kim, I take no satisfaction, and in fact it saddens me, but I
must say that you are a prime example of what it is that ham radio has
degenerated into. You clearly can't understand even what it is that we
are discussing here.
But don't feel lonesome and blue- you have LOTS of good company, one of
which is named Cecil.

No, YOU don't get the personal touch with CW. Your claim to have
passed a CW test notwithstanding, you clearly have no knowledge of the
mode.

>>> Rose said 1500 people went into the sea that night.
>>
>>I know some people went into the sea and then into the lifeboats.
>>Was anybody saved who went into the sea and not into the lifeboats?

Yes. As I recall, six people were pulled from the water by the lifeboat led by Officer Lowe. His boat was the only one that went back to rescue those in the water after the ship sank.

In addition, one of the collapsible boats was upside down, and quite a few survived by hanging on to it. Most of them had swum there but were able to get out of the water.

>My recollection of the data discussed on one of the history
>programs was that less than a dozen of those in the water
>were saved.

I can look up exact numbers for you when I get my copy of "A Night To Remember" on Monday.

As I recall, there were 2205 people on board Titanic on April 14. 705 were saved, the other 1500 died of various causes - mostly hypothermia. Had there been enough lifeboat space, all could have been saved.

>They froze to death very quickly...minutes.

Would that it were true. Those in the boats could hear those in the water crying out for help, and those cries lasted 20-30 minutes or longer. Dead or unconscious people don't cry out for help.

For an excellent comparison of the parallels between the Titanic and Challenger disasters, see:

You just triggered on of my peeves from years ago. A British show called
Danger Man was imported by CBS. It had a really neat harpsichord theme
that was fun. When it got to the US we got a really bad Johnny Rivers
theme on a renamed Secret Agent.

Thar's a man who leads a lahfe of danger, TWANG.

I get a bang out of some of the Goon Shows syndicated by WCLV on Sunday here but firesign theatre would definitely be a coup.

Hang by your thumbs and write if you get work.

Why on earth would anyone want to go through an extra person to get help?
There is NOBODY in emergency services listening to ssb. That means any
communication is going through a third party both ways. If I use my VHF ht
I can call the fire department directly (they monitor the repeaters in the
area) and talk to a qualified person directly while more help is on the way.
I can be talking directly to a paramedic while an ambulance crew is being
dispatched. I know because I did it this winter at the scene of a rolled
over van in Indiana just over the Illinois border. A third party would have
been a pain in the butt, not to mention practically useless.

They were in the shipping lanes equipped with flares. That's how
people were often rescued before radio. The situation would certainly
have been worse but not necessarily hopeless.

> Yes- if better procedures had been in place, the radio op on the ship

If CW works, CW is the cause. If CW doesn't work, CW is not the cause.
I understand how your mind works, Dick.

I was referring to the world outside of ham radio, not the silly
no-code debate. And the statistics (crime, kids out of wedlock,
runaways, suicides, etc) do prove it today.

That just proves that they are not anti-code. They are anti-
code-requirement. That's a big difference. Apparently they
believe they will sell more CW/SSB transceivers if the
code requirement is dropped.

1680. FCC Chairman Wants Change in Amateur Frequency Usage and A End to Morse Code.

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-01 08:05:26 UTC
From: Keith <kewyatt@apexmail.com>
Message-ID: <3ac6e0f2$1_1@spamkiller.newsfeeds.com>
Source record: 5980

April 1, 2001 -(AP)
FCC Chairman wants to eliminate Morse Code and wasted spectrum by Hams.

In a speech Saturday night to the telecommunications industry FCC Chairman Michael Powell spoke out against the use of Morse Code and the waste of valuable spectrum by ham radio operators, ham radio operators are licensed CB operators that pass a Morse Code test. The Chairman is concerned about the waste of spectrum worth billions of dollars to the telecommunications industry that is currently being used by Ham Radio operators.

The Chairman also wants a big change in the spectrum wasted in the Ultra High Frequency area of spectrum in which Ham Radio Operators hold a staggering sixty megahertz of spectrum, more then any other radio service.

"Amateur Radio operators in this frequency band only need about two megahertz to chat with each other about the weather. Cellular and portable communications are in great demand and the FCC should not allow a few thousand people to hog spectrum needed by millions of consumers."

In a detailed presentation he outlined his plan to ask the International Telecommunications Union for the reassignment of a four megahertz chunk of spectrum to the airline industry that is presently held by amateurs near the overcrowded civilian aircraft band. He also outlined the conversion of thirty megahertz of frequency for use by telecommunications providers for data systems that could be used to supply high-speed access to the internet via radio frequencies.

To demonstrate why the FCC Chairman believes the Amateur Radio Service is wasting spectrum he played several tapes of licensed ham operators using vulgar language and jamming stations in the band he wishes to convert to the airline industry.

When asked by reporters about the possible opposition to his plan by ham radio operators the Chairman smiled and exclaimed, "We are going to cut it off and kill it!"

We had (and used) CW as a means of communication when we had to evacuate during Hurricane Floyd. Local Cell Phones were out and voice communication (HF) was nearly impossible to copy. CW was just another "tool" in the toolbox that made communications possible.

Sure he has. Mr. Len has stated many times that he was there on the front lines of the backwater arena of the Korean Conflicts. He was a company cluck in Tokyo (that's in Japan for the no coders of this group) while real men were fighting. Len had to face the problems of the occasional inkbottle going off in his pugy pasty face. I heard the Mr Len received a purple heart for getting hit by flying shell fragments (egg shell).

Life must have been rough having to cower in those watering holes, as opposed to foxholes, there on the Ginza with all the B-ladies hanging on his every word about his exploits on HF Bwwaaahhhhhhhhh

Most often by post-career electronics technicians who insist they know what's best for a radio service in which they are not licensed.

>All of these public postings are not necessarily to the individual
>quoted. Do not get upset or "personalize" someone else's replies.

And remember to do what Lennie says, NOT what Lannie does. They are usually NOT synonymous.

>It is demonstrateable fact that PCTAs in here are intolerant to those
>who are against morse code testing for an amateur radio license

It is demonstrateable fact that post career electronics technicians who are not licensed in the radio service of which they are so critical often liken those who do not share THIER opinions to Nazis, "old farts" or other equally distasteful adjectives.

Then when subjected to thier own medicine, become defensive, profane and generally disjointed that the REST of the world can't see things with THIER clarity.

>Some are downright aggressively hostile and (nearly always)
>attempt misdirection of the subject through personal insults against
>NCTAs any which way they can.

See what I mean? And as for "misdirection", you are invited to research archives of "NoCWTest". It's a true "pot/kettle/black" circumstance.

Lennie knows his electronics to be sure. Above and beyond that, he's worthless. If he can't find it on a website, he has absolutely no Amateur Radio experience base upon which to make the frequent attacks against Amateur Radio that he makes in this forum.

>QED.

QED is right.

>runaways, suicides, etc) do prove it today.

Heads up, Dwight.....Lennie is a MASTER of introducing the (otherwise
defunct) morse code test subject into almost ANY post he can.

Without it, he is nothing. Well...he's nothing anyway, but it makes him
happy to think he knows something.

It only "isn't" because you have nothing else to beat...so you keep beating the code issue. The rest of us have accepted that when S25 is repealled, most likely after WRC2003, that the code test in the United States will likewise disappear.

Only YOU insist on making issue of the opinions of a narrow sector of Amatuers. So beat yourself to death, Lennie. We'll send Mrs. Lennie a card.

Maybe.

Watch it Jim....Next thing he'll do is start going to California State websites and quoting your education credentials, expiration dates and other non-amatuer radio related factoids.

It's easy to do when you have NOTHING to do.

Of course in another thread posted this date he was lambasting Dwight Stewart with how "PCTA's" use personal insults and "misdirection".

I will LOVE to see Lennie the Limp's explanation of how the time of day you made this post had anything to do with ANY Amateur Radio policy.

>Forgive me, revered licensed person. I was unaware that amateur
>radio physics was different than the physics of radio in every other
>radio service.

Lennie, Lennie, LENNIE! This newsgripe is Amateur Radio POLICY. NOT
Amatuer Radio PHYSICS.

On matters of PHYSICS we accept your qualifications. In matters of Amateur
Radio policy and PRACTICE, you have NO experience. This by your own admission
on numerous occassions.

>Forgive me again, most esteemed qualified licensee, but the FCC
>still does not require staff or commissioners to be licensed in
>amateur radio service in order to regulate it.

Misdirection. The discussion was on YOUR lack of credentials to make
informed opinions on matters of Amateur Radio policy or practice.

>Further, I see nothing
>in the entire body of Title 47 that prohibits citizens from commenting
>to the FCC in regard to radio regulations of any radio service.

To the Federal government when a solicitation for comment is requested.
Your rantings in HERE amount to nothing more that intimidation and bullying.

>Feel free to correct me

No problem...our pleasure. You make it soooooo easy.

>(I no longer read the Federal Register cover to cover)...(SNIP)

In as much as you have, in recent postings, demonstrated ignorance of (or
perhaps "arrogance" of is a better desciption) radio regulations that pertain
to COMMERCIAL applications, I doubt you ever read it at all, let alone cover to
cover or in reference to Amateur Radio matters.

You're losing valuable "message points". Lennie. Better hurry and catch
up!

>From: lenover21@aol.com (Len Over 21)
>Date: 3/31/01 12:43 AM Central Daylight Time

Dear James,

I hope that you will take some time to research the tens of thousands of posts that Lennie has made in the last few years under numerous screen names (NoCWTest, Avery Fine, LenOF21, Len over 21 among others.....). Then you will find out why Amatuers on both sides of the "morse code test" issue distance themselves from Leonard H. Anderson.

I quite admittedly get up in his face at every opportunity, James, and I probably can stand to cool it...but I don't tolerate bullies well, and he IS a bully in EVERY definition of the word. He get's back that whcih he serves.

Needless to say, Lennie doesn't like having his rants skewered with facts, but that's usually what happens. He constantly trips himself up on matters of POLICY or Amateur Radio PRACTICE, and then tries to hide behind lengthy dissertations of a TECHNICAL nature.

Welcome to the NG, but don't let your guard down with Lennie. He'll slap you silly when you least expect it.

Hope to work you on the air sometime...that's what it's all about.
Another fact that Lennie the Licenseless forgets. Or perhaps he just doesn't get...?!?!

73

Steve Robeson, K4YZ

> I began legally operating on HF in February, 1953.

But never as a licensed Amatuer Radio Operator.

>Some are downright hostile.

And you're not?

>Thank the Lord that there are still human beings in US amateur
>radio!

Last I checked there was no species limitations or prerequisites, Lennie. Which means even YOU could qualify for a license. But I doubt it.

>All I am advocating is the elimination of the morse code test
>for any class of amateur radio license. That sort of thing results
>in outright angry hostility by a number of pro-code-test advocates

>who insist on keeping what myself and many others call a
>"hazing ritual."

The FCC has already stated it will revisit the test after S25 is repealed. Ergo you are beating a dead horse...Or at least a dormant one until after WRC2003. They have already stated they will be glad to be done with it once the treaty no longer binds them.

The anger results from being made the butt of your lies, slurs, and insinuations.

And YOU call it a "hazing ritual" because you can't otherwise justify your position.

>The technology of radio has advanced far since I first began
>in it 49 years ago and, in the course of a career involving
>radio and electronics, I've had to keep pace with that advance.

No, not really. You are not active in any practical application of radio technology (cellphones and AOL notwithstanding).

Nor do you have a viable grasp of current legal matters pertaining to ANY sector of radio communications, witness your "expiration" of your GROL license this past October.

>As I see it, many in US amateur radio want to keep the
>avocation frozen in the standards and practices of the 1930s
>or late 1940s.

Thank you for making my point. Amatuer Radio of my "era" (1972) was nothing like the 30's or 40's. And since I am STILL licensed (and ACTIVE), it is STILL my "era", and Amateur Radio in 2001 is nothing like it was in 1972.

Ergo, you have once again spun your wheels with NO regard for the TRUTH or REALITY.

>That includes keeping amateur radio licensing
>in that same time frame, preserving morse code in a sort of
>"living museum" as if that is the main skill that any radio
>amateur should possess. To what end for a hobby?

Amateur Radio licensing in 2001 is NOTHING like 49 years ago. Or 29 years ago...or 9 years ago....

>I do thank you for your civil support. It is an agreeable
>even pleasureable sight to see someone who will not insult
>or demean someone simply because they have differing
>opinions.

Oh, don't worry....before long he will have a chance to be subjected to the same lies, insults and degradation that you inflict on EVERYONE in this NG...EXCEPT, of course, for your ANONYMOUS friends "MegHz" and "W2DNE".

>The problem is that many licensed radio people insist on
>forcing their personal hazing rituals on newcomers.

Hmmmm....First YOU insist that the FCC, not Radio Amateurs are the ones who promulgate and enforce Amateur Radio regulations.

Then you insist that AMATEURS "insist on forcing thier personal hazing rituals on newcomers."

So which is it, Lennie? Are Radio Amateurs creating this "hazing ritual" or is the FCC doing it?

Remember, the FCC Commissioners are NOT licensed Amatuers, and would have EVERYTHING to gain by waiving their hand and dismissing the code test requirement.

Yet they don't. Why? Because it is INTERNATIONAL LAW that binds thier hands, not any "hazing ritual".

>US amateur radio is not a public safety radio service nor is it
>a military radio service nor is it any kind of occupational
>radio service. It is defined as a radio activity carried on
>without pecuniary compensation, the primary reason for
>using the word "amateur."

Misdirection. Lennie ignores the very first paragraph of Part 97. No, Amateur Radio is not a "public safety" or "military" radio service, however it is a PUBLIC service. The >>FCC<< says that the Amatuer Radio service exisits, in part, due to it's unique ability to provide the capabilities that it does, and that SPECIFICALLY includes it's ability to provide emergency communications.

"Emergency communications" and "public safety" are not necessarily synonymous. Lennie ignores that, too.

>There should not be any reason to think that an "amateur"
>is demeaning...yet many amateurs will not hesitate to
>demean professionals.

Lennie, YOU are the only "professional" that gets "demeaned". NO ONE in this NG makes any effort to take ANY "professional" to task. YOU, on the otherhand, come to an Amatuer Radio NG with no license, NO practical experience in ANY facet of Amateur Radio practice, and with NO vested interest in the future of Amatuer Radio, and then insist that YOU know what's best for us based upon your "professional" career.

"Commercial" radio is NOT "Amateur" Radio. Beyond the physics of radio wave propagation itself, neither has anything to do with the other.

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

>Date: 3/31/01 12:11 AM Central Daylight Time

>Far more "clues" here than there...except for the old-tyme
>religion that epitomizes morse code testing.

Here we go again. I made absolutely NO statement relative to Morse Code testiing....Lennie HAS to "introduce" it in order to keep his head above water.

>Hint: The FCC authorizes US amateur radio licenses. The FCC
>does not require either staff or commissioners to have amateur
>radio licenses to regulate US amateur radio.

Hint: Read your own writings, Lennie. YOU state Amateur Radio Operators enforce some undefined "hazing ritual" yet you THEN misdirect the discussion to the lack of licensure of the Commissioners.

Hard to mix those apples and oranges, isn't it, Lennie...?!?!

>Robeson "knows" nothing of the kind.

Sure I do...You've done it before..you will do it again.

>Again, Robeson "knows" nothing of the kind...but Robeson insists
>on retention of the morse code test in the license examination
>because he had to take one.

Leonard H. Anderson is blatantly lying in the face of facts to the contrary. I "insist" on the retention of the code test since it is a binding legal treaty obligation of which the United States is signatory to.

I have stated this before.

And of course, YOU have tried to skirt this truth by somehow trying to make us believe that the United States is not obligated to honor this treaty and that you, a United States citizen, is not obligated to observe the treaty.

Phil Kane did a superb job of setting you right on that. Again, a rant ruined by facts...they always are.

>The rest of Robeson's message is the usual personal insult:

>> Cowardly creep.

I notice you make no effort to deny it. Good for you.

>The morse code test may be Robeson's "test for manhood."

Nope. USMC boot camp did a pretty good job of that. Along with many other (non-amateur radio related) life changing events and experiences. None of which I am sure you had the opportunity to experience from the test bench.

>Robeson should, but seemingly cannot, explain on civil terms
>why the morse code test should remain forever and ever to be
>used as a test for newcomers to amateur radio.

First of all, only YOU insist that I think it should "remain forever". I never said this. It is a LIE promulgated by YOU.

Furthermore, "newcomers" have not HAD to sit for a Morse Code examination since February 14th, 1991. And to put the deathblow to your rant, Lennie, officials of the FCC have stated publicly that it will act accordingly when the BINDING treaty has been repealed.

Now...try truth and facts next time you come at me, Creep.

Uh, Rob I don't "tap out" code. Operators who use CW SEND code. tapping
is not involved. It can be done with about the same sort of composure
that you can talk, by those who are a little experie nced and practised.

>
> > No one has ever suggested you give up anything at all. The point is

successful. As a matter of fact, it still only has a recovery rate >>of
approximately 12-22%.

>Please do not include personal experience data from the purchasing >department
at Antec.

First of all, I don't work at Antec. Don't let the domain name of the work
"address" fool you. It's a large complex.

Ooops...guess you didn't find that out while doing your snooping, did you?

And the facts are from the American Medical Association...unless you'd care
to dispute them, too...???

>Amateur radio is NOT a Public Safety radio service.

Please cite the paragraph where I said it was. Failure to do so is to
validate the fact that you are again LYING.

>>No, it's not, but it's ability to provide a level of emergency
>>communications is it's PRIMARY validating factor in Part 97. I know >>you
know this, and ignore it, but it's there. It's law. It's in writing. It's
>>the hole in your sinking rants.

>The only "hole" is there, not here. Amateur radio is NOT a
>Public Safety radio service.

Please (civily) disprove the statments made.

It is a FACT of federal law that Amateur Radio exists IN PART due to it's
emergency communications capabilites. Please refer (again) to the VERY FIRST
PARAGRAPH of 47CFR Part 97, Basis and Purpose of the Amatuer Radio Service.

No one, least of all me, has stated that Amateur Radio is a "public safety"
service. This is a misdirection that you are again trying to perpetuate.

>Why should anyone want to emulate Robeson?

Or the 600,000+ other American citizens that have obtained a license?
Including pre-K children, the deaf, the blind, the aged and...Oh, what's the
use...???

They did it...you CAN'T.

Ah, I see the problem. You just don't have enough knowledge and
experience to understand that conditions on HF can make SSB (and other
modes) useless when CW can still be used effectively. Sorta like what
has happened last couple days following the solar flares. Guess that
comes from your knowledge all being from books and experience all being
a "telecommunications technician" which would pretty well be shorthand
for circuitboard changer and software installer in a plug-n-play world.

>
> >
> > By the way- you may have passed a CW test somewhere at some time, but

> I use a straight key ... what else would i call it?

Well, if you "tap out code" it can't be very well formed code. You
might want to check into the recommended way of handling a straight key.
It would also tire you out very quickly. You don't "tap" the key.

Yep, that's pretty well standard for local EC groups. Works out pretty
well, too
as long as you have no need for longer distance comms.

Wow. Since I'm only
> a nocode tech I guess I shouldn't be helping save any lives because I don't
> know CW...Guess I should just 'resign' my "position" (voluntary positions
> that they are) as assistant Skywarn coordinator.

And who suggested anything like that? The idea is to inform you that
there is a whold world of communications out there that you clearly know
nothing of.

Monster Sunspot Hurls Solar Flares Toward Earth

News/Current Events News
Source: Reuters via DailyNews.Yahoo.com
Published: 04/01/2001 Author: Reuters, Deborah Zabarenko
Posted on 04/01/2001 07:58:02 PDT by GeekDejure

WASHINGTON (Reuters) - Four solar flares and a pair of powerful magnetic gas clouds spawned in a monster sunspot were headed for Earth and could affect power systems, satellites and some radio transmissions, a top space weather forecaster said.

They might also provide a dazzling display of the northern lights if they arrived at night, said Gary Heckman, senior forecaster for the U.S. Space Environment Center in Boulder, Colorado.

``They're headed our way,'' Heckman said in a telephone interview. ``But these still aren't the barnburner events. ... It will tickle some power systems. Satellite operators will notice.''

The solar flares -- explosions in the sun's atmosphere -- and the fast-moving magnetic gas clouds, known as coronal mass ejections, were hurled at Earth from the biggest sunspot scientists have seen in the past decade. The sunspot was about 86,800 miles in diameter and had about 13 times the surface area of the Earth, according to the National Science Foundation (NSF) and the U.S. Geological Survey (USGS). The spot is so big it can be seen unaided as long as filters are used to protect the eyes from damage, the NSF said in a statement.

Sunspots are dark patches on the sun's surface caused by a concentration of distorted magnetic fields. Violent solar activity is believed to be caused by the release of magnetic energy. The first bit of stormy solar weather left the sun on Wednesday, and the first effects of it

were expected to reach Earth late on Friday and continue through the weekend, Heckman said.

The USGS, which monitors solar weather at a network of magnetic observatories around the world, said Earth's geomagnetic field ``is expected to become quite disturbed'' by this solar activity. ``While geomagnetic storms give rise to the beautiful northern lights, they can also pose a serious threat for commercial and military satellite operators, power companies, astronauts, and they can even shorten the life of oil pipelines in Alaska by increasing pipeline corrosion,'' a USGS statement said.

Heckman said it takes about two days from the time the sun fires off flares or throws out a coronal mass ejection until its effects can be felt on Earth, when a hot ionized gas of charged solar particles hits the Earth's magnetic field, causing fluctuations in it. The big sunspot has another week to go before it rotates away from Earth, but that could be plenty of time to cause mischief, Heckman said.

``The monster sunspot's still there,'' he said on Friday afternoon. ``That region (of the sun) has been storing energy for more than 24 hours. It's just building it up, so when it's released, there is the potential for a really large event there. ... It's rather ominous just sitting there for the last 24 hours.''

An image of Thursday's coronal mass ejections can be seen online at http://www.spaceweather.com

>>Gee Len, you're an old fart but not a radio amateur.

>True...I've been a radio professional too long.

Maybe you should try a career you are GOOD at next time...???

>>Your *desire* as a non-radio amateur has little to do with anything.

>It is not just my desire, but rather a large group of others who
>have been held back by the flatulent, conservative long-timers'
>insistence on keeping the status quo.

Obviously a too-ignorant "group" since it's been possible to be a licensed
Amateur Radio operator for over a decade now.

>>I *desire* many things that
>>I'll never achieve unless I apply myself toward obtaining them.

>How does that moral-ethical viewpoint of acceptance of status
>quo make Heil "superior" to all others?

He didn't say he was (superior). You did. And I agree.

>A fact of jumping
>through hoops established by chronologic very-long timers is
>only evidence of having jumped through hoops.

You mean those unlicensed, non-code tested Commissioners that you often
refer to, Lennie? Seems to me none of the current Commisioners, by law the
guardians of radio law, are past mid-40-something, although I admittedly
haven't done a "bio" on any of them.

If you mean Licensed Amateur Radio Operators, it further occurs to me that
YOU have stated that it is the COMMISSIONERS who promulgate and enforce radio
regulations, NOT Amaterus.

So which spin is it THIS time, Lennie?

>Those who have jumped through old hoops are fully expected to
>demand that all newcomers do the very same thing...to "measure
>up" to their exhaulted, "superior" accomplishmentss.

Is "accomplishmentss" MORE superior than just "accomplished"..???

And which "old hoops" do you refer to?

The tests of the 40's? The "new" Novice and/or Technician of the 50's? How about the "Incentive" licenses of the 60's? Maybe you mean the "old" hoops of "Novice Enhancement" of the 80's? Or perhaps you meant the "old hoops" of the codeless Technician of the 90's?

Which one of the myriad of license changes, testing formats, or other regulatory upheavals of the last 30 years that I have been witness to do you refer to as "old hoops", Oh Licenseless One...???

>The problem is that the FCC regulates US amateur radio, not some
>wanna-be ex-officio "leaders" in the group of already-licensed
>amateurs.

Then you agree that it is NOT Amateur Radio operators who perpetuate that which YOU refer to as a "hazing ritual"..???

Or are you trying your own "cake and have it to" experiment, Lennie?

>Up until the FCC relinquishes their regulation of
>amateur radio ordinary citizens of the US can freely comment
>to the FCC whether or not the ex-officio "leaders" think they
>are "qualified" or not.

Then comment to THEM about it, Lennie. Anything in here is just ranting and bullying on your part...Pure and simple.

>The FCC has stated publicly that it does not consider a morse
>code license test relevant to their task of regulating amateur
>radio in 1990 and in 1999. [they are required retain that test by
>ITU-R S25.5]

And in THIS paragraph you contradict other assertions you have made relative to the FCC's stance on Morse code testing and the binding treaty of which THEY cite as reason for retention of the code exam at this time.

Furthermore, it completely sinks your OWN rants about how members of the Amateur Radio community are somehow holding the FCC's feet to the fire vis-a-vis code testing. Now you state it's ITU. But only two weeks ago you went toe-to-toe with Phil Kane over international radio law...guess you MIGHT still be stinging from that little slap-happy session...?!?!

>Does Heil think the FCC is "not qualified" to regulate US amateur >radio?

Regardless of what the FCC mayor may not be "qualified" to do or say, it's pretty evident that YOU are not qualified to address the topic with an INFORMED opinion.

DAMN you make this easy, Lennie! Thanks!

Jim have you read Richard P. Feynman's *minority* report on the Space Shuttle "Challenger" Disaster? Riveting reading, chilling, to say the least, and an excellent example of what bureacracy teaming up with defective technical work can cause. It is really astounding, much more is involved than only the rubber
O rings. One HOPES at least some of the awful problems permeating NASA have been resolved. It's difficult to imagine anyone willingly boarding a shuttle otherwise.

As you may already know, Feynman was the lone scientist on the panel of heavyweights which investigated the disaster, and he wrote his report detailing exactly how it happened, with a very clear discription of all the events and problems that lead to it. The rest of the panel wanted to suppress it, and after a bitter fight it was finally included - in the appendix! If you read the report but not the appendix you would miss it entirely! Clearly the truth would NOT have been made known.
If not for Feynman we probably would have never known what caused Challenger to explode. We owe him a debt of graditude.
If you want I could scan my copy and send it to you as a ten page .pdf file.

Dick

I certainly agree, this is and always has been a silly debate. The very idea that people why profess to want to be ham radio operators would be so upset by a simple code test is pretty assinine. *ESPECIALLY* a very basic, 5wpm test.

Again ... I must add that Within the 50-60km's you may expect someone to help you out those solar flares won't bother any ssb comms... but of course ... if you want fred from timbuktu you better get that 1kw linear amp and tap right away

My knowledge in the field comes from years of experience. Both as a technician with RCMP as well as an indeendant contractor. My electronics knowledge however factors nil into this subject anyways.

Or much more likely, what if rolling (or continuous) blackouts took the repeater off the air and there was no surviving charge in the backup battery?

The very reason why it's important to maintain a CXW test even if no
one is required to maintain knowledge and skill. Experience has shown
that enough of those who are required to passa test keep an interest in
the mode and maintain their capability such that there remains a pool of
available operators. When testing is dropped that factor goes, too. The
complete availability of radiotelegraphy as an available mode is at
stake.

It's noivel that you CW denyers all "tap" your key, thus illustrating
for all to see how little you actually know about how to operate CW.

First there has to be interested and Cw Qualified operators around who understand the realities of life in the ARS and in exactly how it can easily go in emergency comms. That leaves out 99.9% of the code bashers.

Then I'd go simplex on the output freq. of the repeater. I can talk 15+
miles on the 7watt ht. I have a 50watt mobile in the car. I doubt it would
be a problem. If it was, I would switch to one of the other 13 or so
repeaters in the area. Blackouts and outages of that magnitude would
probably have ARES and RACES activated anyway and our club, and/or one of
the others, would have one of our generators set up at the repeater site as
well as members at the fire stations and hospitals. In any case, I'd still
have direct comms via VHF.

Then you're not pahying attention, still. Arnie and his Emergency Comms group used CW to pass message traffic re the hurricane from the area of the storm to the State Capitol when conditions were too bad for SSB to be heard and no other alternate means was at hand. You can continue to refuse to believe in the need for this capability as long as you want but facts are facts.

>>as Strong and Mighty. It is seen in here on a regular basis
>
> Most often by post-career electronics technicians who insist they know
>what's best for a radio service in which they are not licensed.

Poor Robeson. He cannot argue a subject, he can only argue personalities.

Robeson keeps claiming he "knows what is best for US amateur radio" because he is licensed in it. Null reasoning.

The FCC regulates US amateur radio. Neither staff nor commissioners are required to possess amateur radio licenses in order to regulate US amateur radio.

By Robeson's logic, the FCC cannot possibly do its chartered task since only a few staffers have amateur radio licenses.

>>All of these public postings are not necessarily to the individual
>>quoted. Do not get upset or "personalize" someone else's replies.
>
> And remember to do what Lennie says, NOT what Lannie does. They are
>usually NOT synonymous.

That is Robeson's poisoning of the well. My arguments in here, when there are individuals who care to argue subjects rather than personalities, are simply to eliminate the code TEST for any US amateur radio license examination.

Unfortunately, some poor souls such as Robeson, need some sort of outlet for their frustrations so they attack, fight, become aggressive, mean-spirited, loutish, and generally act the asshole by going after personalities.

>>It is demonstrateable fact that PCTAs in here are intolerant to those
>>who are against morse code testing for an amateur radio license
>
> It is demonstrateable fact that post career electronics technicians who

>are not licensed in the radio service of which they are so critical often
>liken those who do not share THIER opinions to Nazis, "old farts" or other
equally
>distasteful adjectives.

Robeson wishes to attack credibility by challenging someone's
pre-retirement working career. Let it be known that my working
career was, and still is part-time, as an electronics engineer.
That is verifiable by anyone wishing to contact KD6JG or W6MJN
or any of the corporations who were my employers (all given in
prior postings). Engineering requires responsibility and
knowledge in order to continue receiving a salary. I continued to
receive a salary. Yes, in the past I was working as an electronics
technician...prior to 1965.

Now let's look at Robeson's working career based on his own
statements in here. He insists on a personality fight, so let it
become one.

At some time in the past Robeson claims USMC rank of E-7
but received a medical discharge, terminating that career.
He made some vague claims of being involved in aviation
electronics while in the USMC but nothing specific stated.
He then became a licensed practical nurse, no doubt inspired
by some love of healing the sick (we have all seen that
represented in here). That second career was suddenly
terminated, claiming "burn-out." A third career was begun as
a purchasing agent (Antec Corporation, in Georgia) which
involves living away from home during working days. All of
those career choices have emphasized rank and status,
according to Robeson's past postings...especially the
"authorized" licensing for military and nursing.

Robeson's "authority" on amateur radio matters consists of
being licensed as an Extra class radio amateur for some
time, no other "authority" or "qualifications" in that regard
other than some tenure in that class.

> Then when subjected to thier own medicine, become defensive, profane and
>generally disjointed that the REST of the world can't see things with THIER
>clarity.

More well-poisoning. My arguments have tried to remain on
the subject. Those "qualified" licensees such as Robeson do
nothing but argue personalities, attempting to demean and
defame anyone who does not see things their way. Strong
arguments for one side of a subject ON the subject are not
personal attacks against those who do not agree with that
viewpoint. The immature will take them personally and the
result is the usual flame-fest and insults.

>>Some are downright aggressively hostile and (nearly always)
>>attempt misdirection of the subject through personal insults against
>>NCTAs any which way they can.
>
> See what I mean? And as for "misdirection", you are invited to research
>archives of "NoCWTest". It's a true "pot/kettle/black" circumstance.

AOL (one of my ISPs) allows up to seven screen names (handles).
I used "NoCWTest" as a handle well over two years ago while
arguing against the morse code test necessity in here. Apparently
Robeson thinks that all non-amateur screen names are not suitable
for the tender eyes of ex-military, ex-nurse purchasing agents who
are licensed in the US amateur radio service.

> Lennie knows his electronics to be sure. Above and beyond that, he's
>worthless.

Tsk, tsk. Robeson attempting to do more well-poisoning. :-)

>If he can't find it on a website, he has absolutely no Amateur
>Radio experience base upon which to make the frequent attacks against Amateur
>Radio that he makes in this forum.

More well-poisoning. Robeson assumes the imperial mantle of
Representative of All US Amateur Radio! [the ARRL claims that,
Robeson is invited to argue representation with them]

Robeson is licensed in US amateur radio. Unfortunately, he takes
that as the "authority" to claim that all who are not so licensed
have "NO" knowledge, experience, love, or anything else of or about
amateur radio. Specious argument, used for one purpose only: The
Big Lie technique of Internet PsyWar. Say it often enough and some
will actually believe it as truth. Robeson has nothing else in his
discussion-debate-argument arsenal except insults and
exaggerations so each and every "reply" of his consists of little
more than an obsessive "battle" comment on personalities.

US amateur radio is one of the most open and visibile and audible
avocations, so much so that regulations forbid codes and ciphers
intended to obscure communications. Amateur radio physics
operate exactly the same as the physics of other radio services.
Publications on the techniques of amateur radio abound, at a
resonable price (relative statement compared with mainstream
publishers). There is no "secrecy" involving the radio hobby
other than in the twisted mentality of a few who NEED the
status symbology of authority to show they are "better" than
others.

This newsgroup was created to discuss the morse code test
issue. Unfortunately, all too many advocating the retention of
the morse code test for licensing have exaggerated that issue
to mean that elimination of the code TEST is an "anti-CW
battle" that the Righteous Codeites must fight.

The "battle" exists only in certain minds. No No-Code Test
Advocate has ever claimed that CW must be "eliminated."
NCTAs have claimed that CW mode should be given equal
footing with all other allocated modes in fairness and openness.
Fairness in regulations is seemingly against the PCTA
eliteness and favoritism of CW. The "battle" is against the
elite, not the avocation in general..

Feel free to vent whatever gripes you in another newsgroup, then.

This newsgroup was created to discuss the morse code test
issue. It has been extended to include all policy matters
concerning amateur radio.

>And the statistics (crime, kids out of wedlock,
>runaways, suicides, etc) do prove it today.

"Crime" as in unlawful radiowave emission has been discussed in
here. Bastardy has been mentioned infrequently, usually as a
pejorative against another. "Runaways" has only been touched
on by those who have "run away" from either amateur radio or
citizen's band radio. A few feel a need to have runaway opinions
of others. :-)

>>radio physics was different than the physics of radio in every other
>>radio service.
>
> Lennie, Lennie, LENNIE! This newsgripe is Amateur Radio POLICY. NOT
>Amatuer Radio PHYSICS.

Please see Part 97, Title 47 CFR, specifically sub-part D titled "Technical Standards." That very much involves physics.

> On matters of PHYSICS we accept your qualifications.

What do you mean "we," your royal behindedness?

Robeson does not "represent" anyone but himself (the ARRL "represents" all US radio amateurs). However, schizophrenia manifesting itself as multiple personalities might just be a qualifier for using "we." :-)

>In matters of Amateur
>Radio policy and PRACTICE, you have NO experience.

Not as a licensee, true. Neither has the FCC since NO staff or commissioners are required to be radio amateurs in order to regulate US amateur radio and to set standards of amateur radio licensing. [a few staff are hams but that is not a requirement]

Robeson has claimed knowledge and experience as a military person but has not been in war. Robeson has claimed life-saving ability as a nurse yet is not authorized to be a doctor. Robeson has claimed all kinds of "knowledge" in electronics engineering by being a purchasing agent but is not tasked at Antec to be responsible for actual engineering.

US amateur radio frequency allocations extend all the way to 250 GHz (1 mm band) yet Robeson has mentioned only once that he operated on 23 cm band using a borrowed HT. There are a number of different modes optional to US radio amateurs yet Robeson has not mentioned any that are not in his store-

bought radio. Tsk, tsk, not many claims to "practical
experience" in US amateur radio on Robeson's side, are there?

>>Forgive me again, most esteemed qualified licensee, but the FCC
>>still does not require staff or commissioners to be licensed in
>>amateur radio service in order to regulate it.
>
> Misdirection. The discussion was on YOUR lack of credentials to make
>informed opinions on matters of Amateur Radio policy or practice.

Nonsense. Perfect direction. The "credentials" Robeson wants
is a license in the amateur radio service. The FCC does not
require such "credentials" for its staff or commissioners in order
to regulate all of US amateur radio.

Further, the FCC will accept any comment from any citizen
concerning radio regulations of any radio service without
requiring "credentials" of operator licensing in any radio service.

>>Further, I see nothing
>>in the entire body of Title 47 that prohibits citizens from commenting
>>to the FCC in regard to radio regulations of any radio service.
>
> To the Federal government when a solicitation for comment is requested.

If the task of reading all of Title 47 and/or the Communications Act
of 1934 and the Telecommunications Act of 1996 is too daunting,
I'd suggest the "FCC Handbook" to explain what the FCC will accept.

The FCC will accept any and all comments, suggestions,
communications from any citizen on any radio service regulations
or policy thereof. It is NOT limited to "solicitation for comment"
(presumably limited to NPRMs in Robeson's quaint use). The
FCC must do so. By law. Live with it.

>Your rantings in HERE amount to nothing more that intimidation and bullying.

Well-poisoning. Robeson continually jumps in obsessively on
any subject I address regarding the comment of another. THAT
is bullying. THAT is intimidation. Quod Erat Demonstrandum.

There you go shaking your "we-we" again. Use of the royal "we" indicates Robeson represents all of US amateur radio (the ARRL claims that, which is it).

Oddly, that "acceptance" is not universal in here. A number of staunch and starchy PCTAs differ with that opinion. :-)

DOS Tip: The code test standard (S25.5) is NOT in the present US adminstration agenda for WRC-03 nor is it mentioned by the FCC International Bureau.

Say hello to all your other multiple personalities, Robeson. I don't want to overlook any of them...

>policy issues related to Amateur Radio. Credentials in this NG = Zip.

Now, now, Brian. Let's not get into the professional area again where you want to argue "legality" of an ENGINEER title prior to receiving a degree (most of my career).

Yes, I was an electronics technician prior to 1964. The interesting part is that industry doesn't need all the anal-retentive "qualifications" and "licensing" you insist on in order to DO THE WORK of engineering or in assuming responsibility of pass or fail of a work task. One has only to do the job, show capability, accomplish the task successfully, and be rewarded with a good salary. In radio as well as electronics. In radio at frequencies below, including, and excluding amateur bands using more modes and modulations than are allocated to amateurs.

What "credentials" or "licenses" are needed to discuss law, regulations, or rules of government? Answer: NONE in open forums or assemblies of citizens.

Kelly seems rather upset that any plain, ordinary, unlicensed-in-the-amateur-radio-service citizen DARES to comment on amateur radio regulations! Imagine that! "No credibility" all derived from a simple argument against retaining the morse code test for a US amateur radio license examination!

Does the FCC require its staff or commissioners to have the "qualifications" and "credibility" of an amateur radio license in order to regulate US amateur radio? Answer: NO.

Does the grant of an amateur radio license permit snarly remarks to ordinary citizens not licensed in the amateur radio service? Apparently so judging from some of the

commentary in here.

If you wish to represent all of US amateur radio insofar as "credibility" for comment, be advised that you already have two ahead of you, the ARRL and the we-we person, both claiming that. :-)

>real reality from the inside, you obviously have no clue again because
>like not being a ham you ain't ever been inside the gummint loop
>either.

Something new. Kelly has been a "snivel servant." :-)

Amateur radio was the "credential" for being a "snivel servant?"

On "not being inside the gummint loop" [sic: government loop].
Kelly seems to dismiss anyone else working on Department
of Defense, Department of Transportation contracts. Apparently
all those "snivel servants" had the "proper credentials" as
licensed radio amateurs to be in their position? I don't think so.

>>You may not like the changes or comments, but that is not any
>>valid reason for such a simple dismissal of the FCC's actions.
>>
>See above about how gummint actually works. "Will the last ham radio
>"regulator" around here please turn the lights off on his way out the
>door"

Then there will be a lot of self-proclaimed "ham radio regulators"
all fighting over the light switch. :-)

The FCC regulates a great number of radio services in the USA.
So many that amateur radio is a small part of all those services.
It's not that amateur radio is not important, it is just that all
those other radio services have more to do with US citizens.
Of course, by the "credibility" and "qualification" rules of Kelly
and others in here, only hams can regulate hams, right? :-)

>>Kelly seems to think I speak ill of the dead. I do not. I do not
>>see it, "the code test thing," as something that should be
>>worshipped ad infinitum and forced upon all newcomers to
>>amateur radio.
>>
>Hang in with your anti-cw rants Lenny, you certainly have right to do
>that, no problem, rants in this NG seem to be your whole life which is
>fine, no skin off my teeth, your sad limitation.

You seem to take anything against CW in amateur radio very,
very personally. So much so that you wish to deprive all
newcomers any access to HF via a no-code license? Are you
really afraid and are trying to hide it behind bluster and
apparent indifference? Who is the "sad" one now?

>You'll just have to
>excuse my lack interest in the code test thingey for now Lenny, take
>it somewhere else, it's dead in my book, I'm too busy beeping the
>planet to give a bleep about what you "think".

A rather nice demonstration of eliteness, of self-proclaimed
"ownership" of an avocation. If you were so "busy" you need not
have replied at all. :-)

Then we'd move to a different repeater ... or simply go to the site and
operate a mobile station

I think you are confusing two different shows.

As I recall, "Danger Man" (starring Patrick McGoohan as John Drake, British secret agent) was the original series. They are all B&W. It was a straightforward Cold War cloak-and-dagger spy series.

It was followed by "Secret Agent", also starring Patrick McGoohan as John Drake. Many if not all of them are in color, and as the show progressed Drake becomes more and more cynical about his job. He begins to question some of the things he is required to do by his bosses.

Then in 1967 came one of the most unique series television has ever seen. Patrick McGoohan created and starred in "the prisoner" (the lack of caps is intentional). He plays a disgruntled British secret agent who is finally so fed up that he resigns. Great stuff.

>during Hurricane Floyd.

That was in late summer, 1999. Less than two years ago. Not ancient history by
any means.

> Local Cell Phones were out and voice communication
>(HF) was nearly impossible to copy.

Similar problems were encountered during the ice storms in the Northeast back
in 1996 or 1997. The emergency was regional, not local, so VHF/UHF could not do
the whole job. Poor conditions, low power and jury rigged antennas made signals
weak, and auroral effects made what was left difficult to copy. CW was often
solid copy when SSB was useless.

>CW was just another "tool" in the
>toolbox that made communications possible.

Agreed! But some folks want to ignore any tool that isn't used every day.

A friend of mine is an "organization freak". Always after me to get rid of
stuff, 'specially things that aren't the latest technology or fad. Latest
buzzphrase is "if you haven't used it in the last six months, you'll probably
never use it, so get rid of it".

About the tenth time I heard this, I came up with a short list of things I
hadn't used in the past six months:

- Spare tire
- First aid kit
- Fire extinguisher
- Manuals for appliances and computer
- Life, auto and homeowners insurance policies
- Lawn mower and several other gardening tools

So far, no more organizational buzzphrases.

>
> An interesting comment from the same twerp who insists taht there is no
>change in the Amateur Radio Service regulationsor licensing structure.
>
> As usual, trying to have his cake and spin it too.....

False. Radio regulation changes have been on-going in all US radio services. In the case of the US amateur radio service such changes have reinforced the morse-privileged classes, created an even-larger class distinction by increasing the number of license classes, made bandplans on HF not covered by the ITU-R (most of which favor the "higher" classes). The morse code test has never left license examinations for any class having below-30-MHz operating privileges and the prominent membership organization has made it a policy to discourage any elimination of ITU-R S25.5.

The ex-officio standards and practices in US amateur radio have been encouraged by the ARRL as those that were established in the 1930s and 1940s. Publicized activities have, up to the recent past, encouraged the epitome of amateur activity as CW on HF using ready-built radio equipment.

That's what I have stated in the past, that is what I still state now. There is some sign that the ARRL general policy is beginning to change but they still encourage operation on HF over and above any higher bands and still relegate experimenters and innovators to forums in other venues.

>haven't done a "bio" on any of them.

While everyone who reads these postings by Robeson know his antipathy to the Internet and websites, the FCC maintains an extensive website at http://www.fcc.org that includes biographies of all commissioners.

Robeson has still not commented on whether or not the FCC
staff or commissioners are required to have amateur radio
licenses in order to regulate US amateur radio.

Since the commissioners are generally attorneys, they DO
take code tests...but their code test involves law and the
codification of laws.

> If you mean Licensed Amateur Radio Operators, it further occurs to me
>that
>YOU have stated that it is the COMMISSIONERS who promulgate and enforce radio
>regulations, NOT Amaterus.
>
> So which spin is it THIS time, Lennie?

Try taking a tranquilizer before replying, it will improve your train
of thought, spelling, and attention span.

The FCC enforces civil radio in the USA. The FCC also makes
available all public documents related to their regulatory actions
to handle the "promulgation" part [a rather loose use of that
word, but within boundaries of English...barely]. The FCC also
makes regulations, changes regulations, eliminates some
regulations based on citizens' input.

It is fairly well known and demonstrateable that some long-time
radio amateurs think of their collective avocational group as a
"fraternity" or "lodge hall" and would attempt to "rule" based on
their tenure within that avocation. The PCTAs in here are just
such a group. They claim "turf" and "ownership" and will enforce
their personal preferences by any means possible.

>>Those who have jumped through old hoops are fully expected to
>>demand that all newcomers do the very same thing...to "measure
>>up" to their exhaulted, "superior" accomplishmentss.
>
> Is "accomplishmentss" MORE superior than just "accomplished"..???

Irrelevant on word-correction which is not applicable here.

Prolonged denial of the obvious is not good. The same long-timers
mentioned just previously insist the epitome of US amateur radio
accomplishment is morse code skill. That has become an article
of faith with them and they are unyielding in their demands.

> Which one of the myriad of license changes, testing formats, or other
>regulatory upheavals of the last 30 years that I have been witness to do you
>refer to as "old hoops", Oh Licenseless One...???

Keeping the morse code test for any license having below-30-MHz
privileges, the class-distinction of the "incentive license plan," of
the reiteration that the only radio activity worth doing is CW on HF,
the in-bred urban myth generation and promulgation that amateur
radio is some kind of guild that requires a myriad of unofficial rules

of activity and tenure before "advancing" in anything are some of
those "hoops." .

>>The problem is that the FCC regulates US amateur radio, not some
>>wanna-be ex-officio "leaders" in the group of already-licensed
>>amateurs.
>
> Then you agree that it is NOT Amateur Radio operators who perpetuate
>that which YOU refer to as a "hazing ritual"..???

I do not agree. Then general attitude of the ARRL of the past, in
both policy and publications, has emphasized morse code
ability over most other modes in US amateur radio. This pleases
the long-timer conservatives who make up a disproportionally-
large grouping within the ARRL membership. The hazing ritual
is supported by many in the fraternal sense, being something
that newcomers must do because others have had to do it.
Hazing rituals are emotional, not logical, and certainly not a
regulatory thing.

>>Up until the FCC relinquishes their regulation of
>>amateur radio ordinary citizens of the US can freely comment
>>to the FCC whether or not the ex-officio "leaders" think they
>>are "qualified" or not.
>
> Then comment to THEM about it, Lennie. Anything in here is just ranting
>and bullying on your part...Pure and simple.

There is nothing "pure" nor "simple" about Robeson's comment.

This is, by most others, a discussion, a debate, an argument and
many of those long-timer tenure-means-ownership types are
already here. By observation Robeson is one of those.

>>The FCC has stated publicly that it does not consider a morse
>>code license test relevant to their task of regulating amateur
>>radio in 1990 and in 1999. [they are required retain that test by
>>ITU-R S25.5]
>
> And in THIS paragraph you contradict other assertions you have made
>relative to the FCC's stance on Morse code testing and the binding treaty of
>which THEY cite as reason for retention of the code exam at this time.

There is NO contradiction. Robeson may wish to quote from FCC
90-55 or 99-412 to explain, but otherwise, in the regard of treaties
or agreements made by the USA to other governments or bodies,
there is an obligation to obey the terms of such treaties or
agreements. Obligation does not render it an absolute as in an
absolute obeyance of terms. Terms of treaties or agreements
have been "violated" in the past.

> Regardless of what the FCC mayor may not be "qualified" to do or say,
>it's pretty evident that YOU are not qualified to address the topic with an

>INFORMED opinion.

Well-poisoning again by personal pejoratives. Not unexpected.

1751. Re: Restructuring -- did it make a difference

> Here we go again. I made absolutely NO statement relative to Morse Code
>testiing....Lennie HAS to "introduce" it in order to keep his head above
>water.

US amateur radio restructuring (FCC 99-412 R&O) did NOT change the morse code test?!?!? Of course it did.

>>Hint: The FCC authorizes US amateur radio licenses. The FCC
>>does not require either staff or commissioners to have amateur
>>radio licenses to regulate US amateur radio.
>
> Hint: Read your own writings, Lennie. YOU state Amateur Radio
>Operators
>enforce some undefined "hazing ritual" yet you THEN misdirect the discussion
>to the lack of licensure of the Commissioners.

The FCC will accept communications from citizens on any radio service, licensed or unlicensed in any radio service, in regards to any radio service regulations. The FCC has to.

Many refer to the morse code test as a "hazing ritual" in the license examination. The reasons for knowing morse code have long since disappeared as a regulatory necessity. OOK CW is not mandated over and above any other mode allocated to radio amateurs, so why is that code test still required as a regulatory matter?

Answer: It isn't required by the FCC as they have said in 1990 and 1999 in their Reports and Orders. The FCC is constrained to keep it because it is required under terms of membership in the ITU.

Summary: An unrequired-for-regulatory-sake regulation has no reason for existing, hence the "hazing ritual" name.

>>Again, Robeson "knows" nothing of the kind...but Robeson insists
>>on retention of the morse code test in the license examination
>>because he had to take one.
>
> Leonard H. Anderson is blatantly lying in the face of facts to the
>contrary.

Opinions and suppositions are not "lies," they are just opinions
and suppostions.

>I "insist" on the retention of the code test since it is a binding
>legal treaty obligation of which the United States is signatory to.

Good scout, gittem up with "it's the LAW!" :-)

Now explain to everybody how the FCC "needs" that morse code
test as part of its amateur radio regulatory task.

The FCC has already explained that it does not consider that
morse code test relevant to its regulatory task. In 1990 and 1999.

> And of course, YOU have tried to skirt this truth by somehow trying to
>make us believe that the United States is not obligated to honor this treaty
>and that you, a United States citizen, is not obligated to observe the
>treaty.

Nonsense, said nothing of the kind. The USA is obligated to meet
all international treaties and agreements but that obligation is not
an absolute for any nation. See past history of the USA and
other nations since the formation of the United Nations (the ITU is
a UN body).

> Phil Kane did a superb job of setting you right on that. Again, a rant
>ruined by facts...they always are.

Robeson must have been "imprinted" by George Orwell's
novel "1984." :-)

>>The rest of Robeson's message is the usual personal insult:
>
>>> Cowardly creep.
>
> I notice you make no effort to deny it. Good for you.

Robeson's obsession with personal insults is such a common
occurance that I usually omit commenting on them. :-)

> Furthermore, "newcomers" have not HAD to sit for a Morse Code examination
>since February 14th, 1991.

...and the newcomers had to stay on bands above 30 MHz.

Some in here will say "that is where newcomers 'belong'"
(something proven by demonstration all too frequently).

> And to put the deathblow to your rant, Lennie,
>officials of the FCC have stated publicly that it will act accordingly when
>the BINDING treaty has been repealed.

Tsk, tsk, you should read FCC R&Os 90-55 and 99-412 with a bit
more attention to word useage. If you look close you will find that
all the FCC said was that they are still obligated to keep the
morse code test because of S25.5. Your words do not match

what the FCC stated.

> Now...try truth and facts next time you come at me, Creep.

:-) Guaranteed...Robeson keeps ending all of his "replies" with
a personal pejorative.

I was working with Red Cross during the ice storm of 1998 ... we used 2m for ontario ... and most of quebec ... we were of course the most greatly affected with Newyork getting hte tail end of the storm.

Our repeaters were all fully funtional.

SSB on 10 was quite nice.

We never once tapped a single letter out on cw.

Here an emergency communications comment filed with the FCC
for the License Restructuring Decision. I thought you might be interested.

Larry KC8EPO

~~~~~~
In The Matter Of 1998 Biennial Regulatory Review ï¿½ Amendment of Part 97 Of
the Commissionï¿½s Amateur Service Rules, FCC WT Docket 98-143

FCC Secretary Magalie Roman Salas
Office of the Secretary, Federal Communications Commission
1919 M Street N.W. Room 222
Washington, D.C. 20554

Public Service is the basis on which the amateur Service license has been
authorized since its inception. This is the aspect on which the commission
is urged to focus, and which we here address, as follows: (1) license
privileges and classes, (2) testing requirement (code), (3) RACES Station
licensing, (4) Amateur operation.

Background And Basis

Since 1985 California has had an aggressive program utilizing Amateur
licenses. That year the state legislature mandated a paid staff coordinator
with directions to enhance and expand that public service function involving
amateur licensees. In April 1985 we began a series of education bulletins
~~~~~~

statewide at a time when there but three RACES units in the state. Today almost all of the 58 counties have an emergency communications unit based on the Amateur licensees; and our weekly EMCOMM Bulletins have would-wide distribution in addition to every state in the country.

In so far as we know, our program ï¿½ the leader in the nation ï¿½ is the only one with a paid staff position created by the state legislature to support the use of Amateur licensees in service to their communities.

In 1987 the American Radio Relay League requested that the statewide Bulletins be placed in the Amateur packet radio networks around the U.S. In time they became the standard in the US, replacing s defunct FEMA education program. Today these Bulletins are the source of education information for emergency communications units based on Amateur Radio. They are literally on hundreds of bulletin boards and Internet sites around the world.

Because we are involved daily with quintessential public service ï¿½ their use in and for local government, we have a broader experience of Amateur license activities that than most petitioners. Our program is the recognized model in the U.S., Canada, Australia, New Zealand, England and other countries worldwide. The weekly EMCOMM Bulletins are on the worldwide Web at www.acs.oes.ca/ . Our Manual, titled the ï¿½establishing and maintaining an Emergency Communications unit for governmentï¿½, is the only one of its kind in the country.

(2) Testing Requirement (4) Amateur Operations

In the 1990ï¿½s very significant changes have occurred affecting the usefulness of Amateur radio licensee to government. Today we face information systems that did not exist in the past. As we look to the year 2000 we need Amateur licensees capable of providing a variety of services in communications, typically computer based.

Thus, the use of code has declined to where it is no longer viable for government.

a. California eliminated the use of CW some years ago. Although we have a large and extensive communications center staffed for and with Amateur licensees, we had not used CW in decades. We retained a CW net until 1995, but it served no essential purpose, just once-a-week training for 3-5 participates. No county governments participated for years.

b. The US Coast Guard also eliminated the use of morse code several years ago, which is further evidence of its lack of applicability to todayï¿½s communications needs.

Today, our information systems are based computer based and operate by both wire and wireless. If the Amateur of today is not familiar with computers he/she is of little use. A background in computer experience and knowledge is far and away more important than that of CW.

When I became licensed in 1941 Amateur radio was the means of alternative communication. Today, the computer provides that, hence thousands of those

who would otherwise be FCC Amateur service licensees never apply because the service does not attract them. Until we recognize that factor the service will not grow significantly, nor do we get the new blood of technically oriented people to spark the new innovations so badly needed.

To make matters worse, to a large degree an ï¿½old-boy networkï¿½ exists in Amateur radio; one that grew up with ï¿½you must pass the codeï¿½ concept. Like people everywhere ï¿½whatï¿½s good enough for me is good enough for youï¿½ is the mindset of many of todayï¿½s Amateurs. Without the ability to look to the future, or grasp the many changes occurring around them, they would keep practices long since useless. In government today we pass data digitally, not by CW or voice radio. In fact, there are government agencies who seek to do away with radio entirely.

One of my constant battles is to keep some radio capability functioning in government. There is a new breed of administrators who focus on the bottom dollar, not redundancy. Often they have no experience in communications failures, and their digital computer networks have not failed. They see no need for radio. So, they no longer fund or support radio programs. The federal Highway Authority (FHWA) is one instance of an agency that no longer supports High frequency radio. Itï¿½s a very real every-day battle. Our fiscal year has just begun and yesterday I was informed that there are no funds for communications equipment as it all went for computer systems.

So, I urge the reduction of code requirement to 5 wpm at general license level as it is not essential skill qualifier in todayï¿½s world. When it is possible to do so under international radio regulations, I further urge the Commission to drop the CW requirement entirely. It is not relevant to the year 2001 and subsequent real-world needs in communications.

(1) License Privileges and Classes

The proposed classes (no-code Tech, General, Advance, Extra) are appropriate. There is a shortage of people above the tech license interested in emergency Communications. It has been the Tech licenseeï¿½s that have made our programs possible. Without them the programs would flounder. There are exceptions, but in general it is the Technician licensees we rely on today. Due to the shortage to those qualified to operate HF we have to put a higher qualified licensee with them just to staff HF circuits.

I urge the Commission to adopt a requirement of computer ability, at least at the general level. Knowledge of technical digital information is not important. There may be those who will assert that test should include questions on Amtor, Pactor, Clover or such. The problem there, however, is that such modes are already out-of-date. To lock the testing into them is already a decade behind the times. What we need is young minds open to new possibilities, not old minds locked in decades old minsets. There are enough computer specialist around that itsï¿½ easy to find them and they donï¿½t need Amateur licensees to fix technical problems. In fact, it is their interest in the technical aspect of computers that have draws them away from Amateur radio.

I recommend that the licensee demonstrate the ability to use a computer; that is, demonstrate operating ability in word processing program, in a text-editor, how to use eMail and how to use communications programs. These are skills that need demonstrating in person, in lieu of the code test. It will be difficult to have multiple choice or yes/no questions to uncover these skills. Have the applicant demonstrate ability on his/her computer or one by owned by the examiner. Itï¿½s not too difficult to set such a standards as it is required of countless job applicants these days. An alternative is some of certification by a computer user group as to demonstrated skills.

(3) RACES Station Licensing

I urge that the provision for RACES station license be dropped. Few exist. Those that do should not be renewed. With todayï¿½s easy availability of callsigns, the purpose of calls for government EOCï¿½s is simple. Here we formed a club to support the state activities and got licenses for each of the stateï¿½s regional EOCï¿½s. Itï¿½s not quite the same, but it works.

The disadvantage of the RACES station license is a provision in the current regulation that has been misapplied. (see.......) This provision should be dropped. Specifically, that section states that a Races Station (defined in ....) cannot talk to another RACES station. Legally that means two RACES stations LICENSEE. However it has been interpreted to mean that any Amateur licensee operating in the RACES (mode or activity) cannot talk to any Amateur licensee operating in a non-RACES activity. For instance, during the 1970ï¿½s a FEMA employee critized one of our California amateurs for allowing a Amateur operating in a RACES activity to call and talk to an amateur for a club (non RACES) who had telephone capable of solving a need. The FEMA person did not understand that it only to a RACES station licensee.

I could have sworn that you wrote "seeming intolerance". There is
either a seeming intolerance or a real one.

> Witness your own intolerant remarks as a bona fide PCTA.

I'm not intolerant toward those amateurs who have not passed a code
exam. I work quite a few on 2m each week. That doesn't mean that I am
in agreement with the whole code free license scheme. What's your
schtick? You've had decades to obtain a ticket and to date haven't even
come up with one of the non-code variety. Is you is or is you ain't
interested in ham radio?

> >Why should the policy arguments against amateur regulation changes
> >stop? The policy arguments for amateur regulation change haven't

Heil does voice his grievances as does Anderson. Anderson pontificates
and condescends. Anderson does not confine his arguments to the subject
but personalizes them based upon his opinion of those who disagree with
him. Anderson speak with forked tongue.

> All of radio has evolved over the decades...with a considerable

> a code test, then all newcomers must take such a code test.
> He has Spoken.

Mental foot-dragging? Now we've got a brand new concept! Thanks for re-stating the obvious concerning change within all of radio. I don't know what we'd do without you.

When I entered amateur radio and each time I've undertaken an upgrade of my license class, I set about to meet the qualifications for that license. At no time did I demand that those standards be lowered for my benefit nor did I put off obtaining a license until such time as the powers that be made the entry into amateur radio easier. What's your personal holdup?

>indicates Robeson represents all of US amateur radio

At least I have a "we-we" to shake, Lennie. And it does NOT indicate that
I "represent all of US Amateur Radio".

It does put me in the majority. A majority of which YOU are not.

>Oddly, that "acceptance" is not universal in here. A number of
>staunch and starchy PCTAs differ with that opinion

I am sure they don't. However as previously pointed out, the
representation here is a fraction of 1% of the overall Amatuer community.

While acknowledging the lack of objectivity of my own opinion, it would
appear that it is in congruence with that expressed in much of the Amatuer
media.

>Say hello to all your other multiple personalities, Robeson. I don't
>want to overlook any of them...

What was that you were saying about others making personal attacks...???
Seems that admonishment only fits when it DOESN'T mean YOU!

Not that we expected anything less.

Putz.

>Now, now, Brian. Let's not get into the professional area again
>where you want to argue "legality" of an ENGINEER title prior
>to receiving a degree (most of my career)

Yes, Brian...nothing like nagging little details about legality. Lennie doesn't like legalities. They interfere with his rants.

>Yes, I was an electronics technician prior to 1964. The interesting
>part is that industry doesn't need all the anal-retentive
>"qualifications" and "licensing" you insist on in order to DO THE
>WORK of engineering or in assuming responsibility of pass or
>fail of a work task

Oh, I SEE! So, by virtue of doing the WORK, you are justified in claiming the TITLE...! ! ! !

I can teach you (well, I MIGHT be able to teach you...) how to start an IV or use a defibrillator. Neither task, even though they may be done correctly, would make you a Nurse or Paramedic.

>One has only to do the job, show capability,
>accomplish the task successfully, and be rewarded with a good
>salary.

I see....Well, THAT being true, Lennie (YOU said it...it MUST be true...) you may refer to me as DOCTOR Robeson from now on.

>In radio as well as electronics.

Radio is NOT electronics?

>What "credentials" or "licenses" are needed to discuss law,
>regulations, or rules of government? Answer: NONE in
>open forums or assemblies of citizens.

The same "credentials" it takes to be an annoying putz. Ergo you have two "accomplishmentss" to your credit.

>Kelly seems rather upset that any plain, ordinary, unlicensed-
>in-the-amateur-radio-service citizen DARES to comment on
>amateur radio regulations!

If you limited yourself to "policy" or "regulations", chances are there'd be no argument. However you insert your uninformed opinion into arenas of

whcih you obviously have no experience.

Again and again and again.....

> "hazing ritual."

All I am advocating is the retention of the morse code test for HF amateur radio access. That seems to result in hostility from you. What you call a "hazing ritual", I call "a fine and useful tradition". To you and the "others" you mention (do you speak for all of the unlicensed or are you shaking your "we-we"?), a hazing ritual is anything you haven't mastered.

> The technology of radio has advanced far since I first began

I've seen little evidence to suggest that what you say is true. Amateur radio has advanced but has retained some proud traditions. You seem to have a problem with anything which smacks of tradition.

> >In any case, I will take your
> >suggestion as to letting the folks who wish to get into the hobby set the

Right now and for many decades. I'd guess it will do so for many more. Thanks for restating the obvious (for the umpteenth time).

> Neither the staff nor the commissioners of the FCC are
> required to learn morse code or test for any amateur radio
> licenses.

...and this is nothing new. There has never been a requirement for the staff or commissioners to obtain an amateur license. My state DMV doesn't require clerks to be licensed drivers. The clerk who issues marriage licenses isn't even married. Go figure!

> The FCC says publicly that it will accept input on

> technology, radio operation, radio theory, and electronics in
> general.

Us? Are you shaking your "we-we" again? Do you speak for all those as yet unlicensed? You can't simply declare yourself competent in radio and electronics in order to become a radio amateur. You pass an exam. That's the only way in. What is your holdup?

> I do thank you for your civil support. It is an agreeable
> even pleasureable sight to see someone who will not insult

> demean professionals. You have no doubt seen evidence
> of that in here. Such goes on off-line as well.

Likewise, many professionals will demean radio amateurs. I've seen evidence of that in here too. I've worked in both areas and have heard many more supposed professionals demean radio amateurs than vice versa.

>are trying to misdirect the argument by going to a special case
>only for radio amateurs.

Yeah, Brian...and that's no doubt what eats at His Licenselessness. Now any 10 year old that can memorize the question pools can obtain the same GROL Lennie "used" to have, and many DO have in the Amatuer service.

>You seem to take anything against CW in amateur radio very,
>very personally.

No...he just takes your insults personally...especially since you DO direct them at HIM.

> So much so that you wish to deprive all
>newcomers any access to HF via a no-code license?

Another Lennie "misdirection". Nice try. Ineffective, but nice try.

>Who is the "sad" one now?

The wimpering old man in SoCal with his nose pushed up against the Amatuer Radio window muttering to himself "I cudda been a contender...I cudda been a contender..."

>A rather nice demonstration of eliteness, of self-proclaimed
>"ownership" of an avocation. If you were so "busy" you need not

> There is no "musing" about Heil being a PCTA, a mental old fart,
> an amateur conservative who opposes change.

More of your civil debate tactics? Your words suggest that anyone who
disagrees with your view is "a mental old fart". We had a neighbor in
Florida back in the 50s who began, after his retirement, writing
numerous bitter, lengthy letters to several newspaper editors in which
he railed about anything he perceived as an injustice or an affront.
You remind me of him.

> >Your *desire* as a non-radio amateur has little to do with anything.
>
> It is not just my desire, but rather a large group of others who

I claimed no superiority. It is merely that I am currently enjoying my time in amateur radio while you merely rave about the things which apparently keep you out of it. You can be a doer or you can be a talker. You seem to be a talker.

> >Those
> >who might want to get into amateur radio might have to meet the

I expect you to meet the current requirements for obtaining a license. You have a no code venue open to you. You have not, for whatever reason, met the requirements for such a license. A 5 wpm code test buys you an HF license. You've not tackled that. Maybe by the time your professional radio semicentennial rolls around you'll grace us with your presence....but probably not.

> The FCC has stated publicly that it does not consider a morse

Do I think that most commissioners are political animals who no little about their craft and who depend upon staff for their knowledge? You bet I do. Do I think you'll have to pass a morse test for HF amateur radio access for at least several years? Yep. Are you going to try to out wait the morse exam? Good luck.

If I wanted to learn about horses, would I talk to a guy who raises horses and who rides them or would I get my information from a guy who once read a book about horses? What can you tell me about amateur radio, Len?

> The FCC regulates US amateur radio. Neither staff nor
> commissioners are required to possess amateur radio licenses
> in order to regulate US amateur radio.

This has nothing to do with anything. Your record is stuck.

> By Robeson's logic, the FCC cannot possibly do its chartered
> task since only a few staffers have amateur radio licenses.

Aside from enforcing the regs on the books, the FCC was pretty content to let amateur radio alone. For a number of years the commission even skipped the enforcement of the amateur bands to great extent. Even at that, the Commission is the authority on *regulation*. You, on the other hand, are not.

By that logic it doesn't make sense to require ham radio licenses since
hams are required to do nothing whatever after passing the test.

>Poor Robeson. He cannot argue a subject, he can only argue
>personalities.

Lennie, read this loud and clear...the "debate" on code testing is OVER for anyone with an IQ over 27. This barely includes you. There is only a code ARGUEMENT, which you seem to enjoy perpetuating.

>Robeson keeps claiming he "knows what is best for US amateur
>radio" because he is licensed in it. Null reasoning.

And Lennie, allegedly a college graduate, puts into quotation marks a statement he attributes to me.

This makes it a lie. Another lie. Not unexpected.

>By Robeson's logic, the FCC cannot possibly do its chartered
>task since only a few staffers have amateur radio licenses.

More baseless assertions. Not one line of retrieveable proof from ANY archive to substantiate another Leonard H. Anderson lie.

Lennie, what would some of your old cronies "on the job" think if they saw how you behave? Liar and bully. Some end to a career, huh...???

>That is Robeson's poisoning of the well. My arguments in here,
>when there are individuals who care to argue subjects rather than
>personalities, are simply to eliminate the code TEST for any US
>amateur radio license examination.

If only this were true. Lennie might have a point. But as usual....

>Unfortunately, some poor souls such as Robeson, need some
>sort of outlet for their frustrations so they attack, fight, become
>aggressive, mean-spirited, loutish, and generally act the asshole
>by going after personalities.

Ah...back to the profanities again. Once again, Lennie forgets that profanity is the last resort of the childish mind. Of course it's not when HE does it......(yeah...right)

>That is verifiable by anyone wishing to contact KD6JG or W6MJN

Perhaps we should copy some of your "enlightening" posts and let your "friends" in on how you REALLY act in public. Or that you USE them to somehow validate your conduct as acceptable.

"Gee..some of my best friends are Hams...."

>He made some vague claims of being involved in aviation
>electronics while in the USMC but nothing specific stated.

A matter of public record, and unlike you, I feel no need to recite page's long CV's in order to bully others.

>He then became a licensed practical nurse, no doubt inspired
>by some love of healing the sick (we have all seen that
>represented in here). That second career was suddenly
>terminated, claiming "burn-out."

Terminated? Hmmm...the hospital I worked at last night will be surprised to hear that....As will several others.

And as for "burn out", well, all I can say is that until you deal with the death of a family member and then try to balance that with a profession wherein you must capably balance your own emotions in such a way as to not negatively impact your dying patient or thier family, you have NO frame of reference in which to make an informed opinion.

Once again...Another topic on which you assert your snide, insulting self without any real, practical experience.

Quite a trend.

>A third career was begun as
>a purchasing agent (Antec Corporation, in Georgia) which
>involves living away from home during working days.

Again, I don't work for Antec. But you keep on trying, Lennie.

>Robeson's "authority" on amateur radio matters consists of
>being licensed as an Extra class radio amateur for some
>time, no other "authority" or "qualifications" in that regard
>other than some tenure in that class.

Never claimed any "authority". Unlike YOU, however, I DO have EXPERIENCE in Amateur Radio.

>More well-poisoning. My arguments have tried to remain on
>the subject.

Yeah...I can see how analogizing persons who don't share my opinions with Nazis is "on the subject".

>AOL (one of my ISPs) allows up to seven screen names (handles).

Yes...and you use them to dilute your postings. And no doubt use the OTHER ISP's that you allude to to create the fictional and anonymous posters in this NG who occassionally come to your "defense".

>Robeson thinks that all non-amateur screen names are not suitable
>for the tender eyes of ex-military, ex-nurse purchasing agents who
>are licensed in the US amateur radio service.

I am not "ex" anything Lennie...Not until they nail the box shut, anyway.

>Tsk, tsk. Robeson attempting to do more well-poisoning

I am sure you wish it were so simple.

>>If he can't find it on a website, he has absolutely no Amateur
>>Radio experience base upon which to make the frequent attacks >>against
Amateur Radio that he makes in this forum.

>More well-poisoning. Robeson assumes the imperial mantle of
>Representative of All US Amateur Radio!

Please disprove my assertions, Your Putziness.

>Robeson is licensed in US amateur radio. Unfortunately, he takes
>that as the "authority" to claim that all who are not so licensed
>have "NO" knowledge, experience, love, or anything else of or about
>amateur radio.

"All"...? Nope. Just you. And that's simply from YOUR assertions of
non-participation. And of course, the numerous posts you have made over these
many months in which you (time after time) make very glaring and obvious errors
in that whcih any ACTIVE Amateur would know to be erroneous.

>US amateur radio is one of the most open and visibile and audible
>avocations, so much so that regulations forbid codes and ciphers
>intended to obscure communications.

A Lennie the Limp "misdirection". No "codes" or "ciphers" mentioned in
any post previous, but he must divert the conversation to some obscure course.

>There is no "secrecy" involving the radio hobby
>other than in the twisted mentality of a few who NEED the
>status symbology of authority to show they are "better" than
>others.

No one said there was. And as for "NEED" to demonstrate authority or how
"better" they are, well, all I can say is that your years of badgering Amatuer
Radio operators in this forum is glaring evidence of that.

Ed Hare is better than you, Lennie. He proves it on a daily basis. So is
Jon Bloom, Phil Kane and a litany of others, simply by virtue of thier DAILY
contributions and acknowledgement by the Amatuer community as a whole of thier
conributions.

What have YOU contributed? A few technical articles in a long-since
defunct Amateur Radio periodical?

>The "battle" exists only in certain minds

In this we agree. For you it is a battle. You frequently accuse me and
others of this, yet you are the only one who perpetuates the mindset.

>The "battle" is against the elite, not the avocation in general.

The people you seek to "engage" are not generally in this NG. You are on the wrong "battlefield". The "fight" is in the editorial pages of QST, CQ, Worldradio and other periodicals. Some of us have made use of that medium. (Please see Nov 99 "Worldradio")

You have not.

And as for "battl(ing)" the elite, judging by popular opinion in those REAL sources, you ARE battling the "avocation in general". That opinion IS changing, but it is doing so WITHOUT you, Lennie.

Life marches on. And in this case, without Lennie.

Yeah, right! Both you and Cecil get caught sending code in the very
fashion of pre-Novices, tapping on a key instead of doing it in a
correct manner - oh so typical of codehating dunces and immediately you
start the running backwards. Now it's "we said that was just the sound"
Right. Idiots au pair.

>the reiteration that the only radio activity worth doing is CW on HF,
>the in-bred urban myth generation and promulgation that amateur
>radio is some kind of guild that requires a myriad of unofficial rules
>of activity and tenure before "advancing" in anything are some of
>those "hoops." .

(1) per your own admission the FCC is bound by international treaty to
continue to require a Morse Code test. The FCC has said it is bound by that
treaty. So HOW does any ARRL (or any other entity) "policy" affect that?

(2) No one has to accomplish ANY "hoop" exercise to advance in Amateur
Radio. Just take the relevant FCC required exam. Period.

Unless you can prove otherwise? The name of someone who can testify that
they were not allowed to obtain an Amatuer radio license as a result of any
"hazing ritual"...Forced at gunpoint to participate in some midnight fraternity
initiation in order to be admitted to the testing session?

>I do not agree. Then general attitude of the ARRL of the past, in
>both policy and publications, has emphasized morse code

>ability over most other modes in US amateur radio. This pleases
>the long-timer conservatives who make up a disproportionally-
>large grouping within the ARRL membership.

Of course you would not agree. It would ruing another LennieRant.

And as for "disproportionally large grouping", since when has it been illegal or inappropriate for a group of like-minded persons to associate under the banner of a membership organization?

That's like saying the ACLU shouldn't be considered a credible civil rights organization because there are so many left-wing minded members in it's ranks.

>The hazing ritual
>is supported by many in the fraternal sense, being something
>that newcomers must do because others have had to do it.
>Hazing rituals are emotional, not logical, and certainly not a
>regulatory thing.

They can support anything they want. Yet no one has EVER been denied access to a test session for lack of evidence of having completed some "hazing ritual". Even you could show up at a test session today and sit for an Amateur exam without providing anything more than proof that you are who you claim you are and the required testing fee.

>> And in THIS paragraph you contradict other assertions you have >>made relative to the FCC's stance on Morse code testing and the >>binding treaty of which THEY cite as reason for retention of the code >>exam at this time.

>There is NO contradiction. Robeson may wish to quote from FCC
>90-55 or 99-412 to explain, but otherwise, in the regard of treaties
>or agreements made by the USA to other governments or bodies,
>there is an obligation to obey the terms of such treaties or
>agreements.

So here we are again. Lennie at first claims that Amatuer Radio operators are holding everyone else's feet to the fire over testing criteria, and then he states that it IS a treaty obligation and the FCC is bound by law to do what it has been doing all along.

>Obligation does not render it an absolute as in an
>absolute obeyance of terms. Terms of treaties or agreements
>have been "violated" in the past.

I have travelled over 55MPH before too. Does that make it legal? Does it justify doing so in a school zone?

>> Regardless of what the FCC mayor may not be "qualified" to do or >>say, it's pretty evident that YOU are not qualified to address the topic >>with an INFORMED opinion.

>Well-poisoning again by personal pejoratives. Not unexpected.

I am sure you consider it so. It nonetheless is correct. You do not have any requsite experience in order to make an INFORMED opinion.

for
>anyone with an IQ over 27. This barely includes you. There is only a code
>ARGUEMENT, which you seem to enjoy perpetuating.

Really? :-) The FCC issued a new Report and Order on Part 97?

Last I looked, Element 1 was still required for morse code tests.

> Lennie, what would some of your old cronies "on the job" think if they
saw
>how you behave? Liar and bully. Some end to a career, huh...???

Heh. Fine, let them observe. No problem. :-)

Ah...back to the profanities again. Once again, Lennie forgets that
profanity is the last resort of the childish mind. Of course it's not when HE
does it......(yeah...right)

Hmmm...an ex-USMC E-7 who is "sensitive to profanity?!?!?"

Poor baby.

>That is verifiable by anyone wishing to contact KD6JG or W6MJN

Perhaps we should copy some of your "enlightening" posts and let your
"friends" in on how you REALLY act in public. Or that you USE them to somehow
validate your conduct as acceptable.

"Gee..some of my best friends are Hams...."

As a matter of fact, Al Walston, W6MJN, was Best Man at my
wedding. :-)

>He made some vague claims of being involved in aviation
>electronics while in the USMC but nothing specific stated.

A matter of public record, and unlike you, I feel no need to recite page's
long CV's in order to bully others.

Translation: Robeson can't describe it.

Terminated? Hmmm...the hospital I worked at last night will be surprised
to hear that....As will several others.

So...do you still have the purchasing agent job or not?

And as for "burn out", well, all I can say is that until you deal with the death of a family member and then try to balance that with a profession wherein you must capably balance your own emotions in such a way as to not negatively impact your dying patient or thier family, you have NO frame of reference in which to make an informed opinion.

My mother died on February 18, 2001 at about 10 AM.

Thank you for your condolences..

>>to receiving a degree (most of my career)
>
> Yes, Brian...nothing like nagging little details about legality. Lennie
>doesn't like legalities. They interfere with his rants.

Robeson's obsession is manifesting itself again. :-)

Robeson has taken things out of context. It is very, very legal
to use the title of ENGINEER (even in lower-case) without having
a state-issued professional engineering license. Check the law
to see that is correct. Most engineers are not PEs, yet they do
engineering work, are regarded as engineers, and are successful.

>>Yes, I was an electronics technician prior to 1964. The interesting
>>part is that industry doesn't need all the anal-retentive
>>"qualifications" and "licensing" you insist on in order to DO THE
>>WORK of engineering or in assuming responsibility of pass or
>>fail of a work task
>
> Oh, I SEE! So, by virtue of doing the WORK, you are justified in
>claiming the TITLE...! ! ! !

No, Robeson jumps mightily into the conclusion pit. My first
engineering responsibility was in 1964 and that title was given
me by Micro-Radionics, Inc. (later bought by Systron-Donner,
which was much later bought by another corporation) of Van
Nuys, CA. Robeson cannot understand that all "credentials"
must be "issued" by "authorities" to be legal and valid.

> I can teach you (well, I MIGHT be able to teach you...) how to start an
>IV or use a defibrillator. Neither task, even though they may be done
>correctly, would make you a Nurse or Paramedic.

Irrelevant to radio, let alone amateur radio. To be correct, I've
worked for Birtcher Corporation of Monterey Park, CA, the
main plant making medical electronics. My title there,
company-bestowed, was Cheif Engineer of the Instrument
Division. Very legal.

> I see....Well, THAT being true, Lennie (YOU said it...it MUST be
>true...) you may refer to me as DOCTOR Robeson from now on.

Purchasing Agent Robeson (if he is still employed as such) can call himself whatever he wants. :-) He is strong, he is mighty, able to leap tall pileups in a single bound!

<more personal insult diatribe omitted>

> If you limited yourself to "policy" or "regulations", chances are
>there'd be no argument. However you insert your uninformed opinion
>into arenas of whcih you obviously have no experience.
>
> Again and again and again.....

Sigh...Robeson still doesn't understand the workings of a democratic representative republic or realize that amateur radio physics is exactly the same as radio physics of every other radio service.

Robeson is a "credential" freak, a control freak who has an obsession with trying to "get" another who won't stand for his bullying, intimidating attitude and constant personal pejoratives used in place of civil replies on subjects.

Good luck on your next job interview...

1788. Re: Restructuring -- did it make a difference

>>only for radio amateurs.
>
> Yeah, Brian...and that's no doubt what eats at His Licenselessness. Now
>any 10 year old that can memorize the question pools can obtain the same GROL
>Lennie "used" to have, and many DO have in the Amatuer service.

Poor baby, no English comprehension. I tested for my First Class Radiotelephone (commercial) license in 1956. There was no "GROL" back then, no exact question pool answers, some parts of the written were essay and diagram-drawing, done at an FCC office. Yes, the present-day commercial radiotelephone test is a bit easier. How does that take away any of the original accomplishment?

Interesting thing. Back over a year ago, Robeson expressed an opinion that a GROL was not to his liking, did not seek to add a commercial radiotelephone license to his list of "qualified accreditations." :-)

>>You seem to take anything against CW in amateur radio very,
>>very personally.
>
> No...he just takes your insults personally...especially since you DO
>direct them at HIM.

Robeson has to jump in because Robeson has an obsession.
:-)

>>Who is the "sad" one now?
>
> The wimpering old man in SoCal with his nose pushed up against the
>Amatuer Radio window muttering to himself "I cudda been a contender...I cudda
>been a contender..."

Sorry, I don't do Marlon Brando imitations (from "On the Waterfront" released some time in the fifties).

Robeson has a vivid imagination...and unable to believe that anyone else has experience in HF radio outside of amateur radio. Big leagues HF communications, 24/7 duty, military, also back in the fifties. Also other-spectrum communications, VLF to

microwaves in the sixties, seventies, eighties, and beginning of
the nineties.

>>A rather nice demonstration of eliteness, of self-proclaimed
>>"ownership" of an avocation. If you were so "busy" you need not
>>have replied at all.
>
> I am sure you'd like to be left alone to purvey your smut. Not likely.

Oh, my! Advocacy of elimination of the morse code test in US
amateur radio is "SMUT?!?" Tsk, tsk, that IS a rather strong
PCTA position, isn't it? :-)

Oh, my, redeaux...a former USMC member complaining of
SMUT is interpersonal communications! :-)

>> Witness your own intolerant remarks as a bona fide PCTA.
>
>I'm not intolerant toward those amateurs who have not passed a code
>exam. I work quite a few on 2m each week. That doesn't mean that I am
>in agreement with the whole code free license scheme.

Everyone who can understand the written English word can
understand you are not in agreement with a code-TEST-free
license. Why is that?

>Heil does voice his grievances as does Anderson. Anderson pontificates
>and condescends.

Heil wishes to join the well-poisoners? Of course he does.
Repeat the "pontification" and "condescending" words often
enough and a few might believe it. :-)

>Anderson does not confine his arguments to the subject
>but personalizes them based upon his opinion of those who disagree with
>him. Anderson speak with forked tongue.

Heil speaks, not with forked tongue, but with the attitude of
the fraternal hall leader. Or is that beer hall? :-)

If someone wishes to discuss, debate, or argue a subject
on the merits of the subject, I'll be willing to do that. When
some, Heil and Robeson at the moment, want to take every

posting so personally, so emotionally that they get into
personal insults, then it is time to return fire.

>When I entered amateur radio and each time I've undertaken an upgrade of
>my license class, I set about to meet the qualifications for that
>license.

Yes, you and Roll, mighty towers of perserverance and
fortitude, willing to jump through any hoop put before you
without quivering. Well, you've accomplished that and feel
that is some kind of permit to push newcomers around.
Why do you have such an attitude?

>At no time did I demand that those standards be lowered for my
>benefit nor did I put off obtaining a license until such time as the
>powers that be made the entry into amateur radio easier.

Ah...the old "obey the LAW" ploy! Nice wording. Good job.

Regulations on amateur radio were made by humans, not
gods. Regulations are changeable by humans. In a democratic
republic we citizens can strive to change laws, regulations, and
rules made by humans in government. Heil seems to think
that everyone must jump unquestioning through the same
hoops he did. Why that attitude?

If anything were to be changed in US amateur radio regulations
other than eliminating the morse code test, I would opt for
TOUGHENING the written test elements. That was stated in
my Comments on 98-143. [it is a public document now, just
one of more than 2500 on file]

One interesting aspect of my suggestion to increase the
number of written questions is that the already-licensed
would get a free ride through grandfathering. All of the PCTAs
would still bitch and moan because morse code is still the
epitome of amateur skill to them. :-)

Heil may not be in a humorous mood to appreciate the
irony in the above. Heil is rarely appreciative of anything
not involved in the absolute obeyance of the existing law,
the mighty and noble perserverance to meet those laws
as they are. Why does Heil have such an attitude?

You are not paying attention, Dick. That's not what I was responding to.
I just did not believe that CW is saving more lives than CPR and asked
for clarification.

I believe there's a need for CW capability and I have that capability.
I believe there's a need for food storage and water filtration units. I
have some. I believe there's a need for solar-power/battery-backup and
I have them. I believe there's a need for wood stoves and I have two.
I believe there's a need for guns for self protection and I have some.
I believe there's a need for a GMC pickup and a Harley and I have them.
I believe there's a need to be able to buy Cinnamon Life cereal at the
grocery store.

I do not believe any of the above needs should be forced on citizens
through governmental requirements or affirmative action programs.

Another straw man ad hominem attack, Dick. CW can certainly be useful
and I am fully equipped for the mode. But it doesn't make any sense
at all to require Morse code skill and not require a CW transceiver
to go with it.

How are you going to run a CW transmitter during a blackout with
no surviving charge on the backup battery?

Don't know about other repeaters, but our local repeater has power
terminals where jumper cables can be hooked up to a vehicle. How
long will a 40 gallon pickup provide power for a repeater?

So as long as there's fresh meat, you don't care if the OF's forget
everything they ever knew about CW. That figgers. Now we know the
true reason you want to maintain the requirement. So it can be
someone else's day in the barrel.

> The complete availability of radiotelegraphy as an available

At one time, the complete availability of a coat of mail was at
stake. And times change so a coat of mail is no longer required.
And progress happens (except to you).

What else can you do with a straight key except short and long taps,
Dick? My key taps every time I push down and taps again every time I
let up. I have actually dampened my Bencher so the up tap doesn't
make as much noise as the down tap.

Yeah, but then came one or another of the Central American natural
disasters or another 2-3 years ago and the HF net which handles
traffic for the Red Cross HQ in Florida to Central America jumped on
40m ssb as usual but got nowhere because of the QRM in the phone band,
some of it intentional, sick as that was, so they moved the operation
down the band and did their thing using CW, look Ma, no repeaters or
jammers.

Yep, the topic has been discussed to the point of absurdity.
Obviously, there is absolutely nothing wrong with having an opinion on
the matter, and voicing that opinion occasionally (I do it myself),
but the almost endless passionate fights over this subject are a
little tiring ("beating a dead horse" comes to mind).

Personally, I'd like to see the code requirement dropped entirely
(and I've said so several time before). However, that will happen if,
and when, it happens. And, if it doesn't, that is just fine also.
I'm not going to lose sleep over it either way. If I decide to
upgrade, I'll take whatever test is required at the time.

"Our" point, Rob is that CW is still a viable communications tool that should and can be used to enhance emergency communications. The EOC had landlines, cell phones, HF and VHF equipment available for use.

In our case, cell phone lines were overloaded (useless), landlines were working, but were very busy. VHF didn't have the capability to reach out 300 miles, and SSB was racked with QRN. CW was clearly the communication tool of choice at the time. Once the QRN cleared, we went back to SSB, which was clearly the mode of choice when readable.

Your side seems to think that local voice communication is the end all solution to every problem. I was merely showing that it was not, and that CW was still a good tool to have available.

Regards,

Arnie -

>again, aren't you?

I think it is YOU who is jumping, Oh Witless One. I AM a part of the
greater "we" of which you make a "suggestive" reference in YOUR "we-we".

>>And it does NOT indicate that I "represent all of US Amateur Radio".

>The royal use of "we" in voicing an opinion most assuredly says you do.

No...it simply puts me in the majority...which when considered against
you, means one ov over 600,000 LICENSED Amatuer Radio opertors...something YOU
are NOT.

>A majority of what? Credential freaks? Control frieaks?
>Mental obsessives who are unable to civilly discuss, debate,
>or argue a subject without tossing in constant personal
>pejoratives?

"Frieaks"...?? Oh...I forgot...spelling correction Of His High An
Meaningless is not applicable here.....

The rest is humorous, coming from you. You discuss or debate nothing.
You assert your opinion and dare anyone to NOT agree with you. The rest is
fodder for the flamefest.

>I am no such "member."

Sure you are. You're the Frieak Supreme.

>Now, now, Yiddish you ain't. But you still have this obsessive need
>to insult the person, don't you? Why is that?

I asked you the same question over two years ago, Lennie. I asked you to
lose the "Nazi", "Brownshirt" and "jackboot" analogies. You refused, pushing
the buttons more freverently and agggressively, adding frequent profanities and
other schoolyard humiliations to the fray.

You got exactly what you wanted. Want some salt and pepper, Lennie?

Or would you prefer to consider apologizing for your OWN "persoanl
pejoratives" and see the flamefest stop?

I am ameniable either way. Your choice.

You DO have my condolences, Len. May she rest in the eternal peace of the love of our Saviour.

I lost my Dad in February of 99 and then Tater died less than 90 days later. However it still does not negate the statement that you tried to blunt with the revelation of your Mother's passing.

YOU still do not have the frame of reference of a PARENT who has lost a child AND must deal with a professional level of dealing with other persons losses in an objective manner. Although it affects each of us diffently, we are all predisposed to the ultimate probability of burying our parents. And knowing your age and presuming an age of at least 20 at childbirth, it would be apparent that she lived a long life.

>>A matter of public record, and unlike you, I feel no need to recite
>>page's long CV's in order to bully others.

>Translation: Robeson can't describe it.

No. Lennie, it means I don't HAVE to describe it. I am not accumulating the "message points" you so desperately covet. I served and the USMC was glad to issue an Honorable DD-214 for it. I also have licenses to practice nursing (with the necessary ancilliary endorsements for advanced skills as necessary) I don't have to detail what state, the dates of grant and expiration or numbers in order to state that I AM a nurse.

>>Terminated? Hmmm...the hospital I worked at last night will be surprised to hear that....As >>will several others.

>So...do you still have the purchasing agent job or not?

And in either case, the relativity to Amatuer Radio is...?!?! Is it your assertion that I cannot do both for WHATEVER reason I would choose to do so?

Take a break, Your Putziness...you are grabbing at straws again.

>no "GROL" back then, no exact question pool answers, some
>parts of the written were essay and diagram-drawing, done at an
>FCC office. Yes, the present-day commercial radiotelephone
>test is a bit easier. How does that take away any of the original
>accomplishment?

Here we have more Cake-And-Eat-It syndrome...specifically Lennie naysaying any suggestion that HIS "GROL" is anything less than the accomplishment he deems it, yet if it were an Amateur revelling in THIER accomplishment, it would be another "Ho Hum..So What" from the Licenseless One.

>Interesting thing. Back over a year ago, Robeson expressed an
>opinion that a GROL was not to his liking, did not seek to add a
>commercial radiotelephone license to his list of "qualified
>accreditations."

And it still isn't. What was the point you were trying to make, Lennie?

>Robeson has a vivid imagination...and unable to believe that anyone
>else has experience in HF radio outside of amateur radio. Big
>leagues HF communications, 24/7 duty, military, also back in
>the fifties. Also other-spectrum communications, VLF to
>microwaves in the sixties, seventies, eighties, and beginning of
>the nineties.

Another opportunity to publish an abridged CV. None of which is relevant to AMATEUR practice. Thanks Lennie. It had been almost 3 days since you reminded us of it.

Putz.

Another late night in the Message Wars, Lennie?

>Robeson has taken things out of context. It is very, very legal
>to use the title of ENGINEER (even in lower-case) without having
>a state-issued professional engineering license.

I never said it wasn't, Lennie. However it IS illegal to state your are a "Professional Engineer" without said licensure. Just as it would be illegal for me to state I am a Nurse without same licensure.

>>>Yes, I was an electronics technician prior to 1964. The interesting
>>>part is that industry doesn't need all the anal-retentive
>>>"qualifications" and "licensing" you insist on in order to DO THE
>>>WORK of engineering or in assuming responsibility of pass or
>>>fail of a work task

>>Oh, I SEE! So, by virtue of doing the WORK, you are justified in
>>claiming the TITLE...! ! ! !

>No, Robeson jumps mightily into the conclusion pit.

I didn't jump into anything, Lennie. You said you were an Engineer by virtue of "doing the work" and receiving a salary for having done the work.

I am not a Physician, yet I do specific tasks as directed by the Physician. I receive a salary for those tasks. By YOUR OWN WORDS, I should be able to claim the title of Physician.

>My title there,
>company-bestowed, was Cheif Engineer of the Instrument
>Division. Very legal.

I am sure it was. But "Professional Engineer" is not.

>Purchasing Agent Robeson (if he is still employed as such) can
>call himself whatever he wants. :-) He is strong, he is mighty,
>able to leap tall pileups in a single bound!

No...I still require a running start.

>Sigh...Robeson still doesn't understand the workings of a democratic
>representative republic or realize that amateur radio physics is
>exactly the same as radio physics of every other radio service.

Double sigh bac at ya, Lennie. YOU don't understand that I have repeatedly acknowledged both to you and this humble assemblage that the physics ARE the same. It's the PRACTICE that YOU refuse to acknowledge as different.

>Robeson is a "credential" freak, a control freak who has an
>obsession with trying to "get" another who won't stand for his
>bullying, intimidating attitude and constant personal pejoratives
>used in place of civil replies on subjects.

Since you are essentially the only person that have such a "relationship" with, I can't help but point out that this is, as I have always contended, a "reply-in-kind" exchange. An apology will elicit a like response and a cooling of the flames. I have made this offer before only to ahve you make light of it. Your choice, your consequences.

>Good luck on your next job interview..

For someone who brags on a CV that has page after page of non-career length employment affiliations, I am sure the "job interview" is a situation with which you are intimately familiar.

It makes little sense that there would be more of them on 10m than any other band. I don't believe that any of those individuals described is addressing you directly. The little VFO tuning knob does wonders for ensuring that you are able to avoid listening.

How many years do we need to hash and rehash this? It is still because
I believe it to be a watering down of standards in order to create "Ham
Radio Lite". Morse is still used extensively in amateur radio whether
other services use it or not.

> >Heil does voice his grievances as does Anderson. Anderson pontificates

Len, you've insulted others here for years but you seem to think that
you should somehow be immune. You can't expect to waltz into an amateur
radio newsgroup in your Foghorn Leghorn costume and proceed to tell hams
how it should be withoutt taking heat for your views.

> >When I entered amateur radio and each time I've undertaken an upgrade of

> Why do you have such an attitude?

'Cuz I'm the kind of guy who sets his goals and sets about obtaining
them. You, on the other hand, are the kind of guy who sits on the
sidelines and issues cat calls. You are the ham radio equivalent of a
Monday morning quarterback.

> >At no time did I demand that those standards be lowered for my

Put enough :-) characters into your stuff so that people will think this
is all said in jest, huh?

> Heil may not be in a humorous mood to appreciate the
> irony in the above. Heil is rarely appreciative of anything
> not involved in the absolute obeyance of the existing law,
> the mighty and noble perserverance to meet those laws
> as they are. Why does Heil have such an attitude?

You have no idea of what I appreciate. I'll let you in on one: I
appreciate the fact that you suffer the ham radio equivalent of penis
envy. We're on the inside and you are on the outside. It galls you.
If you want in, you'll have to set about meeting the requirements for a
license. Your comment about getting an Extra "out of the box" shows one
instance where you farted and fell.

Oh. And I don't. Right.

trying to make you less ignorant. If you
> need some algorithms to get you started I would suggest, "Digital
> Signal Processing, A Practical Approach" by Ifeachor and Jervis.

I've owned a half dozen DSP units designed for ham radio and none was
worth keeping. I boubht a Icom 756 partly because of its DSP and find
that it is rarely beneficial on the air. Usually the half kc crystal
filter is what helps by far the most. I know, you digigeeks are forever
improving your algorithms. Why can't you do it right maybe after the
first dozen times if you'r so bright?

>

> nearly as good as PACTOR II.

Indeed, and no one ever said otherwise.

> You are the one who wants to see it done
> so get off your butt and do it.

Confused about who said what again? YOU were the instigator of "why
don't you" not me. I only want hams to learn to use the most basic
radiocommunications mode, as well as all the newer ones. YOU are the
advocate of dumping aht ARS's most basic radiocommunications capability,

not me. And make no mistake, not many years after there is no CW test whatever required, it will be completely gone as a viable communications asset.

And how many do you see sitting unused out at repeater sites? darn few.
Best to haul one to the site when needed.

The entire thrust here is to make the singular point that CW is an
ADDED capability, not intended in any way to replace repeaters, HF SSB
nor any other mode that anyone has available, especially one that is
efficient and easily used. What you people who disdain CW don't
understand it what others her have experienced- there are many times
that come along when nothing else that is available will dothe job.
I know that techies don't even like to think about it, _Cecil is the
best evidence- but it happens. Regularly.
As time progresses and more of the later modes become much more
widespread it easily follows that these incidents would be lessened, as
has already occurred in
the more advanced areas where technology is msor affordable. Much of the
world does NOT have that sort of luxury. By your definition we should
just ignore distress calls from others who may not have available more
modern modes. There will be no choice whem no hams are available who
bothered to learn to use CW.
That alone is enough reason to keep a CW requirement for the future. The
world is just not there yet. TGhere are MANY areas of the world where
even a CW rig is not availble and would be considered a highly
desireable technical communications asset.

NO, NO, NO, a thousand times NO!!!!! In my pre-arthiritis days I could handle a straight key with the best of them, still can do a passable job. But anyone who even suggests "tapping" out code with a key clearly does not know how CW is sent with a key, or he wouldn't even hint in passing of such a thing. "Tapping" a key is the mark of a rank beginner and you should know that is totally incorrect if if you really know anything about CW at all. No wonder you never got above 10 or 12 wpm. You GRASP a key knob with thumb and two fingers and *actuate* it to form characters.

Bullshit Cecil, he said "tapping out code" and that is wrong, wrong,
wrong. Only after he and *you* were called onit did you change your
story, as always.

but it certainly stops people from being able to operate on hf (a rather
arbitrary restriction i might add)

and as mentioned ... I do carry a 12wpm as well as my advanced ... I am sure
if some sort of device went off that specifically targetted all those hf
radios who have ssb cap. and destroyed them there would be a need for it ...

but in reality ... on land there is not a need for >100km emergency traffic

Ok. Tonight as you are roaming the bands looking for some DX you hear a
distress call from Paraguay. It is from a guy in a grass hut that has no
other form of communication. His situation is of an urgent medical nature.
Please describe what you do. This is a serious question. Please answer
seriously.

Please describe the backup power source you have in your shack that allows
high power HF comms in a blackout. How long can you operate before needing
either grid power or a generator? I am using 2 deepcycle batteries which
will allow me to run a 2M 50W packet station, a 2M 10W simplex station to
connect to County EMS, a 6M 10W ssb radio for communications with the 6M net
and a 50W 2M/440 Dual band radio which connects me to both the 2M and 440
nets for about 48 hours continuous before needing a charge.. Another 7AH
sealed lead acid battery will power 2 fluorescent lights for several days
before needing charged. Since we run 2 hour shifts as NCS I can pretty
safely double that for actual use run time since I will only be operating 12
hours a day. The system is always running off of the battery which is being
charged constantly with at least a maintenance charge so I don't have to do
anything to switch over to backup power. As for needing the repeater
infrastructure, I can hit all but 1 repeater on low(5-10W) and can pretty
much cover the area using simplex and high (45-50W) power and I don't
believe there has ever been a 13 county blackout.
I look forward to hearing about your power setup. I realize you were talking
about the repeater but that is only one piece of it.

To each his own, Peter. Spam will be with us no matter what, and probably the best way to deal with it is a filter. I tend to not use filters in newsgroups because, to quote a friend of mine who does the same: "I like to have the latest figure of the index of stupidity".

Source record: 6147

I use 11 1.2V 800aH cells trickle charged off a small 3W solar cell. If need be, I can unpack a 500W (4 cell) solar station from a box I keep for when I do field day type excercises. Seeing as how my station runs about 100W output (thus a 21A draw at 13.8V ... 289.8W ... 300 to be nice ...). And if the earth is covered in a blanket of dust so as to make my solar station unusable ... i can drag the generator out of the garage and use it to power most of the house!.

The solar station cost me 750$ canadian ... including the voltage regulation. The batteries cost abouyt 120$ a piece and the trickle charger cost about 100$ So a cost of about 1000$ total ... not bad for emergencies ... I must add Even when its cloudy I still can get on average 400W from the solar cells.

So, how is it that the CW requirement here in the United States is
beneficial to all of those poor underpriveledged places that don't have the
benefit of anything other than a CW rig? Your answer here really
contradicted your previous statement.

"That alone is enough reason to keep a CW requirement for the future. The
world is just not there yet. TGhere are MANY areas of the world where
even a CW rig is not availble and would be considered a highly
desireable technical communications asset."

That's pretty damn good from those PV cells. I've been thinking about
getting a PV panel for use in charging. I could be charging one battery
while using the other. No real need for a generator here. I can charge
these if desperate off the truck alternator. Looks like one nice thing
about VHF/UHF is the lower cost of backup power. I have about $150 invested
for what I have. How far from your rig is the battery set up at? Mine is
small enough that I keep it within 2 feet but I'm not looking at 11 cells
either. Did or have you look/looked into old telco batteries? I've heard
they can be had for nothing as the telco company throws them out (usually
paying to have them disposed of) long before they are at the end of their
life. I'm going to bring this up at the next club meeting.

these panels are about 2' x 4' ... have 4 of them ... the holes that hte
bolts would pass through are where i place a tether ... one on either slope
of the roof ... the same hole in the wall where my cables come in is where
the power cables come in ... the batteries sit under my stairs on a skid
with 10 gauge wires heading to the station about 15' away ...

I was in a hurry for the batteries (needed em for field day) so decided to
buy em .. whats money for if ya can't spend it eh

I already said that the landlines were very busy and that cell phones were useless from early on. We made a decision to use the most viable communication method available to us. It worked out just fine. It is quite clear to me that you don't have the ability to see through your own prejudice against CW. I made my point and I will leave it at that. The next time we have a need for CW in our area, we will use it (regardless of your esteemed opinion). You, on the other hand, can "tap" out whatever you like on the case of your HT.

You couldn't demean the value of code if you worked at it 24 hours a day.
CW is, and will be, a valuable part of the ARS for as long as there is an
ARS.

I suppose you have never heard of QRN, QSB, or QRM? Try copying a message
when you can only make out every fifth word and see how well you do.

Which is exactly our point. Doesn't it sound kinda funny that the lifesaving
mode of CW can't help unless someone has a cell phone or voice capability?
Isn't that kinda akin to throwing life preservers to the guys that already
made it to shore?

so everyone within 300 miles was on the phone ... you couldn't ssb your way
to another station in a different county ?

besides that ... I only use my ht's when I play paint ball with my friends
... outside that I use my ts440sat or ic706 ... nice cheap rigs

I'm here to help you out the big mud pit you've dug for yourself, Rob. You obviously have never worked for an organized emergency operation or you would know that messages are sent and received from every part of the state. Information concerning weather, damage reports, and movement of evacuees is exchanged. EOCs from all over the state exchange messages with each other. Some of that info is exchanged using CW. Now, I know you didn't want to hear that, but those are the facts.

Apparently you think that someone has to be bleeding profusely before we are allowed to send or receive information from an EOC. By and large, most of the operators are calm, collected, and do one heck of a job. I guess they just fall to pieces in your area.

So do you have to actually go up on the roof to place them or is it such
that you can reach there from a window or something? Sounds like a cool
setup. I'm looking to get a house next year and it will definitely have a
basement for my shack. I would like to expand my backup power a bit to be
able to run other things off of it. If I do, I'm looking into those telco
batteries. I didn't think those liked being deep discharged. I guess it
doesn't happen very often though and you do have 800 Ah to play with.
I guess I'm using my money right then, cause it all seems to get spent. :-)

I have a TS440s AT and with the four optional filters that I have in it, I wouldn't exactly say it was cheap. Then again, you probably are a self-made millionaire : -))

Other modes work great, and I try to use them all. By the way, SSB is fast approaching 60 years old, not exactly a spring chicken. Maybe we should get rid of this antiquated mode, huh? I mean, other modes work much better. Heck, we could set up a digipeater system that links the whole country and get rid of SSB and 90% of the digital modes. Now that's progress.

You can have an s-10 signal, and with QRN or QRM will not be able to copy a single word on SSB. As to your point that there are 10 HF bands. That's true, but generally speaking only 40, 80 and 20 are used for emergency comms. The EOC and state EMA have established certain bands and frequencies for use. They do this so that they have a focal point for communications. The EOC makes the decision if and when to move to different bands or frequencies.

Is the repeater in your backyard, or are you going to have to negotiate
roads closed by whatever weather event that took down the repeater to
get to the mountaintop its on? No situation fits all cases, you know.

I wouldn't say that ... just know where money is appropriate to be spent =)
the rig cost me $600 canadian (about $3 american)

The 706 was a grand ... but I was bored that day so it worked out nice ...

Sounds good to me ... with the number of operators out there that turn their
mic gain up to the hilt to increase their output power it may be a good idea

up here we use whats available ... and for the most part thats vhf ...
antennas are smaller ... 50 watts goes a long way ... and with repeaters and
the IPARN network we dont have any issue communicating 800km's easy as clean
as day

> Please describe what you do. This is a serious question. Please answer
> seriously.

That sort of thing happens regularly, as a matter of fact. Recently
reported in the ham press was just such a case, it wasn't a grass hut in
Paraguay, but a couple in a small oceangoing vessel off Venuzuala that
was attacked by pirates and
the man was shot through the abdoman. He was a ham and had an HF rig
aboard. His wife broke in on the Maritime Mobile service net on 20 meter
SSB, described the situation and the net members started things rolling.
They contacted the US Coast
Guard who coordinated with local naval authorities in the area of the
boat. Among they they got the injured ham to a hospital where he at
least is still alive.
The ham press has reported numerous such cases over the years, several
in recent times.

To answer your question, in that specific circumstance, you would
first and foremost get all the information from him, exactly where he
is, the exact nature of the problem, number of persons involved, injured
or killed, the assistance required and the degree of urgency (if it is
not apparent by this time). Once you have all that information, make
sure the station is told to stay on the air, on the frequency if
possible so that other stations can communicate with him as needed as
the operation gets under way. Only then should you begin to get a relief
effort started.

It is important to know that you don't have to contact the exactly
correct authority to get things rolling. The US Air Force is responsible

for search and rescue operations within the USA and maintains an emergency telephone number strictly for emergency calls. Emergency relief operations at sea are handled by the US Coast Guard. If the problem doesn't lie within their areas of responsibility, they will know where to route the call so that time isn't wasted while you try to sort it out.
I'm rather sure that the US Department of State has a Staff Duty Officer who would quickly handle such traffic to other countries. It might take a call to Directory Assistance to obtain the number. Maybe Dave Heil K8MN can add something on this. Your local law enforcement authorities can usually handle this sort of call, although it will slow things down -more relaying will be needed- if you wind up going this route.

You have no doubt noticed that CW has not so far been mentioned. Of course anyone who has other better means to use will use them. But when hams can copy CW any station who needs to do so can call in on a SSB net on CW and get the same response and service. It happens. When hams can no longer copy CW it won't.

I keep a manila folder on the clipboard with my radio log that is labeled "Emergency Communications". In it there is a copy of a CQ Magazine article from November 1982 entitled "What To Do When You Hear A Radio Call For Help". It contains a collection of suggestions and tips as well as telephone numbers of various USAF and USCG search and rescue centers along with an excerpt from a letter from the Commander of Search and Resce operations in the 11th Coast Guard district that says:

"Amateur Radio Operators are a valuable resource to those of us in the search and rescue business. They have been directly responsible for saving many lives by providing timely and accurate information to rescue facilities. We in the Coast Guard appreciate your interest and continued service".

This magazine article is nearly 20 years old, for sure very much dated, and needs to be replaced with something much more current. ARRL, are you listening?

Cecil:

Don't look now, but hams have always had choice of modes they wish
to employ. In fact, when code testing at adequate proficiency levels was a
requirement for HF licensing, their "choices" were greatly enhanced.
The only thing the elimination of adequate code testing has done is
convince potential hams that this hobby is not deserving of their time or
effort, since little is required of them to enter it.

I spent eight hours a day for ten years doing it, Dick, and I am retired from it. I have the luxury of doing what I enjoy now and I don't enjoy wasting my time trying to make you less ignorant. If you need some algorithms to get you started I would suggest, "Digital Signal Processing, A Practical Approach" by Ifeachor and Jervis.

> You're the character making all the claims on how easy it all is. So
> why don't you prove it by doing it?

I don't enjoy doing it, Dick. And if I spent months designing a system that could copy CW as well as the average ham, it still wouldn't be nearly as good as PACTOR II. You are the one who wants to see it done so get off your butt and do it. I've got more enjoyable things to do.

My elevated radial 40m vertical is about half finished. I almost made a mistake yesterday. I use solid copper wire for buried radials and I started to use that same wire for elevated radials.

That's impressive, you've done your homework and appear ready for a
local emergency. Good show.

I have a motor home with a 4 KW generator and a 40 gallon gasoline tank
that I keep filled. It is equipped with antennas and wired for use as a
ham radio station. I Also have a 12 volt bank of telephone central
office wet cells in my shop that would power a 100 watt HF rig on any
mode and a two meter rig for a LONG time, a week or two I'm sure.

You're right, of course- the transceivers are just antenna drivers and loads, and all the hams are just remote reporting devices.

To alleviate your apples/oranges confusion, consider the purpose of a ham
license VS the purpose of the Morse code requirement.

I agree that VHF is a great way to communicate given certain conditions. But it is only one of many. Why limit the your ability to just one mode? Every mode that is available should be included. That's why our EOC has the capability for VHF, HF and digital modes. We use what works the best for the current conditions. If that means using HF SSB for local / long distance communications, VHF through a repeater or as simplex, or CW when conditions warrant, then that's what should be done. It seems to me that you are placing a very high premium on one or two modes. In my own shack I have the capability to use VHF, SSB, digital and CW, and I will maintain my proficiency in all those modes. It just makes good sense to do that. I am wondering why you don't think it's a good idea to have as many tools available as possible, or why you would demean one mode over another. They all have value.

Some of the mountain top repeaters are solar powered so I don't
see why you are laughing. Our local repeater is designed such
that anyone with a vehicle and a pair of jumper cables can get
the repeater back on the air. A little planning and ingenuity
go a long way in keeping electronic systems operational.

Actually it's two, Bill. We had to have at least one other to receive the messages. Plus you are forgetting the State CW traffic net with an additional 100 or so operators that support the EOC during disasters. I know, there couldn't possibly be that many CW ops these days : -))

So what else is news? I'm not talking about decoding CW with my IC756,
I would be very pleased if it would just do a reasonable job on noise
reduction. It was and is a DSP disappointment. Most of the decoding
functions are done in a computer sound card or a standalone terminal
unit. Got that?

CW decoding is what we
> are discussing

No, that's want YOU'RE discussing. It's what you've been raving about
for years but you just can't seem to find time to work it up. Ever.

Ahhhhhh, so a straight key is not the "correct manner". All those WWII CW operators we see on the History Channel were not sending CW in the "correct manner". Have you told the ARRL that they should cancel Straight Key Night because a straight key is not the "correct manner" for sending Morse code?

What mistake? Straight keys make tapping sounds. The stock Bencher
straight key makes a tapping sound every time the key is depressed
or relaxed. Have you forgotten what straight keys sound like, Dick?

It seems to me that "local" communications is all the rage these days. Not much thought is given to the need for HF to communicate with State or National EOCs. When Hurricane Floyd was here, we used local VHF through simplex and repeaters to report to the county EOC, who then used HF to communicate with the State EOC, giving them valuable information for use in planning and response. Since the Savannah area had to be evacuated, communication with shelters in Macon and even Atlanta was a vital part of the operation. HF communication was the obvious choice. Can you imagine trying to maintain a repeater network to communicate when HF can handle that with two radios and two antennas? Why re-invent the wheel when it works just fine?

I usually just bang my fist on the knob at about 20 wpm in an attempt to get out the right letters. Sorta like a stapler :-)) However, the last time I checked, my straight key didn't have a paddle on it. I guess they changed it while I wasn't looking. If you are actually referring to a set of paddles, then that would be thumb dits and finger dahs. Or ... I just don't know what I'm talking about and I too am a "Yutz" Unless, of course, I'm correct.

I'm curious. What brand of straight key do you own? I've never seen a straight key that didn't have a knob on it. I have both a Bencher straight key and paddles, one has a knob on it and one doesn't. Feel free to guess which one does and which one doesn't. I must be honest, though. Neither one of them goes tap tap tap. That's probably because I control both the up and down motion of the straight key to form the letters and the paddles do their work in silence.

Yes, and every doctor should have that capability too. Just in case they need to fly a patient to another hospital. We are Hams, Rob. We should use the tools available to us as Hams. Having a proficiency in as many modes as possible will only enhance your ability as a Ham. In other words, it's a good thing, not a bad thing.

I'm not going to argue against CW here but I have a question. IF you had
had a packet rig set up, would it have worked? Would it have been able to
get through the noise? I ask because I often get packets from stations that
I can't hear at all over a speaker.

Not everyone lives in a dinky little state. Here it's 150 miles to the
state capitol and twice that to the other side. The National Guard had,
last I knew, a
HF SSB net that met daily. The state ham SSB net meets daily to pass
whatever
traffic they can dream up just for practice. And if/when the New Madrid
fault goes off, I expect some of these practice nets will get some
realtime use.

You're showing your ignorance again, Dick. DSP filtering and
DSP decoding are separate functions. CW decoding is what we
are discussing and I know of no transceiver, including your 756,
that will decode Morse code. Please educate yourself on the
subject before you embarrass yourself any further.

> > And if I spent months designing a system
> > that could copy CW as well as the average ham, it still wouldn't be
> > nearly as good as PACTOR II.
>
> Indeed, and no one ever said otherwise.

Indeed, that's why no one has wasted his time doing it. You are free
to waste your time if you really want that function done, but don't
expect me to waste my time doing it for you.

> YOU are the
> advocate of dumping aht ARS's most basic radiocommunications capability,
> not me.

Liar, liar, pants on fire. I want to dump the Morse code *test*, not
the CW mode. That you believe CW cannot stand on its own merits without
a governmental affirmative action program just shows how little faith
you have in the mode you advocate. I, OTOH, believe that CW will survive
and thrive on its own merits but if it cannot survive on its own merits,
it doesn't deserve a governmental welfare program to prop it up.

> And make no mistake, not many years after there is no CW test
> whatever required, it will be completely gone as a viable communications
> asset.

Your sky-is-falling scare tactics haven't worked so far, Dick. Nothing
you have predicted so far has come to pass. Where are hoards of CBers
and freebanders that you predicted? CW will not be gone. CW will outlive
you and me. (How can you expect anyone to take you seriously when you
have never been right?)

Please stop lying about what I said, Dick. Because CW could be useful in an emergency is not a good reason to force it down the throat of every HF ham. Why can't the hams who want to use CW use it and leave the other hams free to choose their own emegency preparation methods? What is wrong with freedom of choice of modes in a hobby in a free country? What is wrong with live and let live? How would you like for me to try to dictate your personal methods of preparation for emergencies?

You are an absolute moron, Dick. It is not the hand that does the
tapping. It is the key that does the tapping. The hand and the key
act as a single unit. "Tapping out CW" means the tapping sound that
comes from the staight key. You can observe WWII CW operators tapping
out CW almost any night of the week on The History Channel. Are you
too deaf to hear a key tapping?

"Tapping out code" means the sound made by a straight key while code
is being sent. Would you like me to send you a tape of my straight
key making tapping sounds? What an absolute doofus you are.

Thank you for the direct answer. I'm not here to incite argument about this. I have my own opinions and enjoy asking relative questions that help to make my opinion more informed. I may or may not change my opinion but answers such as this go a long way toward gaining my respect for those that know CW and utilize it in this manner. Many of the other arguments have immediately turned me off as being purely emotional and from the attitude of ,"I'm better than you because of this". Those go directly into the trash without consideration. I do not in any way wish to see the mode die. In fact, I'm trying to get my ham club to start an education committee so classes can be started and maybe get some of the boy scouts and other youth groups into the picture, and this includes CW.

Thanks. That felt good to hear. I wish I was in a position to have a generator for several reasons, but until I get out of an apartment I'm afraid it really isn't an option. A barrel of gas and a generator don't exactly go with a 1 bedroom apartment. PV cells...maybe.. Hopefully next year if I can find a good place around here that allows antennas. I'm having to rely on stealth for now. Not allowed any antennas and I have 3. I think they only know about 1 of them and I explained Skywarn to one of the complex managers and they seemed impressed. I guess enough that they haven't made me take them down.
Did you get a deal on those batteries? Is it true what I have heard that they 'can' be had for next to nothing or were those rare instances? Among many other things, I'm trying to get the others in the club (mostly old timers) to get something similar at their homes. I'm having better luck with the new blood for some reason but at 32 I'm the 2nd youngest there. It isn't quite bad enough that everyone needs to label their teeth or anything, but in another 5 years.... hehehe.

Our FREE (local call) ISP offers Internet dial-up with No passwords and No user names, you can even connect with your caller ID barred! Get stuck in now and do whatever you like! Coming soon - Email anyone from anyone, yes, pretend to be someone else - send large attachments to your enemies that will appear to be from anyone you desire. Two birds with one stone really!

LPWS free email now offers POP3 access, so you can set it up in your usual email program (Outlook Express for example) and have it check without logging in to the web based page.

Have fun, G8ASO [LPWS representative on Earth.]

It seems strange for someone who knows CW to bootleg someone's call, except in the case of a former amateur whose license was revoked....

Bootlegging usually is with the voice modes.

The lifeboats had flares? Your source, please.

>That's how
>people were often rescued before radio.

The Titanic fired off all of the rockets she had before sinking. They were
clearly seen by the Californian, but were not recognized as distress signals.

No other ship was in the area. In fact, they were all AVOIDING the area because
of the ice. Carpathia, the Cunard liner which rescued the survivors in the
lifeboats, came from at least 47 miles away. (Most books say "58 miles away",
but recent analyses of the probable position errors of both ships points to a
minimum distance of 47 miles).

> The situation would certainly
>have been worse but not necessarily hopeless.

Sure - a nother ship MIGHT have run through the ice field before those in the
boats froze to death.

I suggest reading "A Night To Remember" and "The Night Lives On", both by
Walter Lord, to get a more accurate picture of what really happened.

It is certainly possible that a packet station would have been able to
receive a message that was not audible via SSB. It all depends on the
current conditions.

i didnt say area ... i said radius .. big difference

a 100km radius allows for destruction up to 200kms across ... thats quite a
bit!

I got some GREAT 160 meter QSO QSL cards, Jeff, when I was KC8M. Wasn't a "bootleegger", though. KC8MK in Ohio was a very prolific 160'er, and I presume these guys mistook the call as "KC8M...Go Ahead" rather than KC8MK.

Wished I cudda used those cards!

Jeff,

If the 10x number is listed on any of the
qsl cards, then you should be able to
use the search facility at the ten-ten
website to find the culprit.

Good Luck!

Assuming, of course, he wasn't botlegging that too!

You might try to see who the 10-10 number holder is, if it IS a legit
10-10 number, then see if the two of you have any "mutual" acquaintences that
might be prone to such carrying's on.

Of course, the culprit might ALSO be unlicensed. Southern California is
LOADED with unlicensed ham-wannabe's that perpetrate such an act. Ofcourse, no
one >>I<< might know...!!!

This region is not flat, HTs are useless around here without repeaters
and even then they have to be less than 5 miles from a machine they
can hit. I have two 50w 2m mobile xcvrs and a 100w HF cw/ssb mobile
xcvr with which I can beep and yak the whole planet on 9 bands
without a repeater.

The repeater is in the rear parking lot of the sheriff's office/county jail
about 1/4 mile from my house. The repeater antenna is mounted on top of
the water tower - great ground plane.

We have a gazillion repeaters here and very few don't depend on the
grid. There are specific repeaters which are up & running when the
lights go out because they are located in and integrated into county
emergency services dispatch centers where the lights never go out.
When somebody needs emergency services we don't fool around, we go to
one of those machines. Nothing of value is lost if the rest of the
machines go quiet.

It definitely helps when one of the local phone co managers is a ham and club member as was the case when I got these several years ago (he's since transferred). They are replaced on a schedule apparently, to forstall failure and were sold to us at salvage price, same as a dealer would pay. I'm sure it varies widely as to how local phone co people handle them. I'd find a local larger battery salvage place and ask them if they ever buy salvage phone co (or railroad) batteries. If so, offer them a good margin above their scrap price for the next ones, and follow up by checking back with them regularly until some show up.

There are a lot of slower CW ops on the air these days, and that's the
way one gains skill and gets comfortable working it. When one finds that
it still is actually a useful mode then it seems to help it to be more
fun as well.

Really? How do you know? I'd wager the percentage of skilled CW ops far
exceeds the percentage of skilled No coders.

Unfortunately, this is far from true in the world of amateur radio!

You only have to take a cursory glance at some of the pages on our club site, to see that this is possibly the norm, rather than the exception. There have been numerous cases of serious damage to vehicles, a lit Marine Distress Flare thrown through a window, death threats, physical damage to radios, assault etc. Of the more bizarre incidents, a serving West Midlands Police officer was witnessed by several people assaulting our club president, Nigel Hopkins, G1XYU, 2 serving West Midlands Police assaulting an LPWS member whilst he was incapacitated in a barber's chair, having his hair cut in Halesowen, still a further incident with a serving West Midlands Police officer that eventually caused his "retirement on medical grounds" Police slang for "The Sack"!
Aerial cables have been cut, family members harassed the list goes on and on!

Radio amateurs are the most stupid and narrow minded section of low achieving social mis-fits you are likely to find. Everyone has a list of enemies, we are just offering a way to have a little fun with no come-backs.

The email program to use is called Easy Mail Sender, download it from any of the Free Software sites listed on our site. Use any from address, usually a deserving enemy is suitable, enter the recipient's email address, add the message and title plus any attachments and off you go. You can follow this up with a threatening message from the recipient to the sender, all good fun, and it just shows how vulnerable email really is.

More fun than just keying your mike over people, the usual weapon of the "sensible" radio amateur!

1942. Hara Arena 2-B sold to developers?

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-03 17:42:33 UTC
From: Barry <bhorowitz99@cooper.com>
Message-ID: <dYny6.1206$rk1.132948@newsread2.prod.itd.earthlink.net>
Source record: 6199
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave

Was listening in the advanced portion of 75 last
night to an rountable of 8-land stations. One topic
that was discussed was the possibility that this
year may be the last year for the Dayton Hamvention
to be held at the Hara Arena. Reasons stated was
that the owners of the Hara have been seeing revenue
drop below the bare minimum for profit margins, not
only due to the continued drop per year at the Hamvention
but cancellations and moving of other events that the Hara
hosts throughout the Year. To put it plainly, the word is that
the Hara Arena will be sold to developers before
November 2001, who then plan to demolish the site and
put up an upscale condo complex with an associated shopping
center on the site. The Arena has outlasted it's intended
life and is now a financial liability to it's owners, so that
means it's "time to sell". Anyone know any more about this ??

>telephone or ssb rig is useful ...

Don't sweat some of these diehard CW fans, Rob. They have
to "prove" (by any means possible regardless of ethics,
morals, or logic) that OOK CW mode is superior, more
useful, or divinely better than any other amateur mode in
order to substantiate their rank, status, and position in USA
amateur radio that came about through that skill. Ergo,
whatever They have done in Their locality is better, stronger,
more robust, more resistant than any of the public safety
or public communications.

Back on January 17, 1994, the Northridge Earthquake
knocked out ALL primary power to a large area of 10
million population of the Greater Los Angeles area at a
bit after 4:30 AM. The public safety folks were already up
and running on VHF voice, UHF voice, and leased landlines,
beginning to aid citizens and repair damages. Likewise for
the utility companies. This locality has organized and
drilled for such emergencies and it worked fine. [others
in here have bitched and moaned that Their local
communities "cannot afford such things" but that is just
ignorant rationales at making their message points to
"prove they are right"]

The state of California (population about on par with
Canada) has an Auxilliary Communications Service
or ACS that integrates amateurs with professionals
into a unified emergency communications structure.
Larry Close has posted most of the ACS general
overview in a separate message in this newsgroup.
The California ACS has NO need for CW modes,
doesn't plan on using such, no longer drills in CW
mode among its amateur members. The ACS is
realistic, it is part of the citizenry rather than being
part of the past.

A number of PCTAs have decried the ACS with the
usual geographic bigotry exhibited by eastern US
and some midwestern US residents. The ACS still
exists, works, and drills successfully for the citizenry,
not for fulfilling some pipe dreams of past glories or
exaggeration of past accomplishments demonstrated
by the PCTAs in here. The ACS model is being
picked up by some other states of the US.

From what I've seen of Canadian efforts at viable
communications of amateur radio networks and in
integration with government radio, Canadians can be
as proud of their efforts in emergencies.

>as far as the operators being calm ... i havent seen a single person (myself
>included) not be shaky during cpr ...

My father suffered a single, fatal heart attack in the
summer of 1975. In my back yard while I was at
work. Reaching home quickly on hearing of this, I was
able to meet and talk with the paramedics who had
tried to revive him. One was shaky with exhertion of
CPR and oxygen application and whatever else they
did, the other despondent because my father couldn't
be saved.

Professionals (those that accept money for services rendered) in radio of the mid-1950s opted for radiotelephone in the majority. There was NO NEED for telegraphy in the majority of the whole radio world back then. Yes, there was some demand for commercial radiotelegraphists in the maritime radio service, LORAN, aviation radio on board trans-ocean air carriers. Was there a need for radio-telegraphists in Private Land Mobile Radio then? No. [the PLMRS as a group then incorporated the public safety radio services of today, in the USA under Part 90] Was there a need for radiotelegraphy in radio broadcasting then? No. Was there a need for radiotelegraphy in long-haul commercial HF communications? No.

Where is radiotelegraphy even used today? On some maritime installations, principally in non-US shipping. [the old 500 KHz international maritime distress and safety frequency has been replaced by GMDSS]. The more modern maritime installation has SSB voice, VHF voice, data and teleprinter, automatic distress and safety UHF/low-microwave that includes GPS position data. The US military still had some need for OOK CW skills up to about 1975; that was very secondary compared to their major message communications mode of data (teleprinter) and voice.

Will any professional (those who accept money, a salary for services rendered) really need ANY radio license to work on government contracts involving the radiation of RF for any intended purpose? NO in the vast majority of such contracts, from the 1950s on to present day. Is any sort of radio license needed by staff personnel today in fixed or land mobile radio, broadcasting, radionavigation, paging, or cellular telephony? You look it up...ALL the Parts of Title 47 are available for free download/viewing at the FCC site, recent as of October 2000. Do you want to count and compare the number of ALL radio licenses in USA civil radio? Those are free downloads too. Radiotelegraphy is a very, very small part of that, almost miniscule, the majority of those existing only in amateur radio.

I never "did it all" as a professional (accepting money for services rendered). I DID have prior experience in long-haul 24/7 HF communications courtesy of the US Army but radiotelegraphy in such military radio of the early 1950s was already almost non-existant. That exposure to the Big Leagues of HF communication (a mere 36 to 42 transmitters at little ADA, all of them running RTTY, AFSK TTY on 12 KHz SSB, and SSB voice) convinced me that the future of commercial communications past the mid-1950s did NOT include any radiotelegraphy. That prophecy-by-demonstration proved correct.

Why would anyone back then have wanted a commercial radiotelegraph license for non-shipboard radio? Did you think lots of radio-work-interested folks lusted after working on the old LORAN shore stations?!? :-)

Grab those Urban Myths of old radio days and haul them out to reinforce the "necessity" to test for morse code skills in amateur radio to provide a "pool of trained CW operators" for the defense or emergency in the USA. :-) Ho, ho, ho, lotsa laffs there, Briny. Ancient. Worn-out.

There's a 40m net based around Miami which handles heaps of traffic
for the Red Cross during & after Central American and Carribean
natural disasters. They use both ssb and cw and the paths are a bunch
more than 120 miles long. There are some people around here who
apparently don't spend much time reading QST so that they'd know
what's actually up in this area.

HF hams don't. They must first pass a stand-alone skill exam on the
fundamentals of one single mode. Only after that do they have any
freedom of choice. What is it about "requirement" that you don't
understand?

Of course, you are trying to change the topic which is that DSP techniques
can be used to decode Morse code. Those techniques are supported by theory.
The reason that nobody has done it is it would be a waste of MIPS to
choose Morse code as the coding scheme.

> CW decoding is what we
> > are discussing
>

Back in the mid 60's I ran into a ham on 20 cw using my call (different
one at that time). I didn't have a beam antenna, so couldn't really get
a bearing on the location, but propagation was primarily to the midwest
at the time. I called him, and signed with the same call. He quietly
disappeared. :_)

Its worth repeating Cary Magnum's comment. It was unfortunate
that the FCC did not mention it in their License Restructuring
Decision.

Larry KC8EPO

~~~~~~
In The Matter Of 1998 Biennial Regulatory Review ï¿½ Amendment of Part 97 Of
the Commissionï¿½s Amateur Service Rules, FCC WT Docket 98-143

FCC Secretary Magalie Roman Salas
Office of the Secretary, Federal Communications Commission
1919 M Street N.W. Room 222
Washington, D.C. 20554

Public Service is the basis on which the amateur Service license has been
authorized since its inception. This is the aspect on which the commission
is urged to focus, and which we here address, as follows: (1) license
privileges and classes, (2) testing requirement (code), (3) RACES Station
licensing, (4) Amateur operation.

Background And Basis

Since 1985 California has had an aggressive program utilizing Amateur
licenses. That year the state legislature mandated a paid staff coordinator
with directions to enhance and expand that public service function involving
amateur licensees. In April 1985 we began a series of education bulletins
statewide at a time when there but three RACES units in the state. Today
almost all of the 58 counties have an emergency communications unit based on
the Amateur licensees; and our weekly EMCOMM Bulletins have would-wide
distribution in addition to every state in the country.
~~~~~~

In so far as we know, our program ï¿½ the leader in the nation ï¿½ is the only one with a paid staff position created by the state legislature to support the use of Amateur licensees in service to their communities.

In 1987 the American Radio Relay League requested that the statewide Bulletins be placed in the Amateur packet radio networks around the U.S. In time they became the standard in the US, replacing s defunct FEMA education program. Today these Bulletins are the source of education information for emergency communications units based on Amateur Radio. They are literally on hundreds of bulletin boards and Internet sites around the world.

Because we are involved daily with quintessential public service ï¿½ their use in and for local government, we have a broader experience of Amateur license activities that than most petitioners. Our program is the recognized model in the U.S., Canada, Australia, New Zealand, England and other countries worldwide. The weekly EMCOMM Bulletins are on the worldwide Web at www.acs.oes.ca/ . Our Manual, titled the ï¿½establishing and maintaining an Emergency Communications unit for governmentï¿½, is the only one of its kind in the country.

(2) Testing Requirement (4) Amateur Operations

In the 1990ï¿½s very significant changes have occurred affecting the usefulness of Amateur radio licensee to government. Today we face information systems that did not exist in the past. As we look to the year 2000 we need Amateur licensees capable of providing a variety of services in communications, typically computer based.

Thus, the use of code has declined to where it is no longer viable for government.

a. California eliminated the use of CW some years ago. Although we have a large and extensive communications center staffed for and with Amateur licensees, we had not used CW in decades. We retained a CW net until 1995, but it served no essential purpose, just once-a-week training for 3-5 participates. No county governments participated for years.

b. The US Coast Guard also eliminated the use of morse code several years ago, which is further evidence of its lack of applicability to todayï¿½s communications needs.

Today, our information systems are based computer based and operate by both wire and wireless. If the Amateur of today is not familiar with computers he/she is of little use. A background in computer experience and knowledge is far and away more important than that of CW.

When I became licensed in 1941 Amateur radio was the means of alternative communication. Today, the computer provides that, hence thousands of those who would otherwise be FCC Amateur service licensees never apply because the service does not attract them. Until we recognize that factor the service will not grow significantly, nor do we get the new blood of technically oriented people to spark the new innovations so badly needed.

To make matters worse, to a large degree an ï¿½old-boy networkï¿½ exists in Amateur radio; one that grew up with ï¿½you must pass the codeï¿½ concept. Like people everywhere ï¿½whatï¿½s good enough for me is good enough for youï¿½ is the mindset of many of todayï¿½s Amateurs. Without the ability to look to the future, or grasp the many changes occurring around them, they would keep practices long since useless. In government today we pass data digitally, not by CW or voice radio. In fact, there are government agencies who seek to do away with radio entirely.

One of my constant battles is to keep some radio capability functioning in government. There is a new breed of administrators who focus on the bottom dollar, not redundancy. Often they have no experience in communications failures, and their digital computer networks have not failed. They see no need for radio. So, they no longer fund or support radio programs. The federal Highway Authority (FHWA) is one instance of an agency that no longer supports High frequency radio. Itï¿½s a very real every-day battle. Our fiscal year has just begun and yesterday I was informed that there are no funds for communications equipment as it all went for computer systems.

So, I urge the reduction of code requirement to 5 wpm at general license level as it is not essential skill qualifier in todayï¿½s world. When it is possible to do so under international radio regulations, I further urge the Commission to drop the CW requirement entirely. It is not relevant to the year 2001 and subsequent real-world needs in communications.

(1) License Privileges and Classes

The proposed classes (no-code Tech, General, Advance, Extra) are appropriate. There is a shortage of people above the tech license interested in emergency Communications. It has been the Tech licenseeï¿½s that have made our programs possible. Without them the programs would flounder. There are exceptions, but in general it is the Technician licensees we rely on today. Due to the shortage to those qualified to operate HF we have to put a higher qualified licensee with them just to staff HF circuits.

I urge the Commission to adopt a requirement of computer ability, at least at the general level. Knowledge of technical digital information is not important. There may be those who will assert that test should include questions on Amtor, Pactor, Clover or such. The problem there, however, is that such modes are already out-of-date. To lock the testing into them is already a decade behind the times. What we need is young minds open to new possibilities, not old minds locked in decades old minsets. There are enough computer specialist around that itsï¿½ easy to find them and they donï¿½t need Amateur licensees to fix technical problems. In fact, it is their interest in the technical aspect of computers that have draws them away from Amateur radio.

I recommend that the licensee demonstrate the ability to use a computer; that is, demonstrate operating ability in word processing program, in a text-editor, how to use eMail and how to use communications programs. These are skills that need demonstrating in person, in lieu of the code test. It will be difficult to have multiple choice or yes/no questions to uncover

these skills. Have the applicant demonstrate ability on his/her computer or one by owned by the examiner. Itï¿½s not too difficult to set such a standards as it is required of countless job applicants these days. An alternative is some of certification by a computer user group as to demonstrated skills.

(3) RACES Station Licensing

I urge that the provision for RACES station license be dropped. Few exist. Those that do should not be renewed. With todayï¿½s easy availability of callsigns, the purpose of calls for government EOCï¿½s is simple. Here we formed a club to support the state activities and got licenses for each of the stateï¿½s regional EOCï¿½s. Itï¿½s not quite the same, but it works.

The disadvantage of the RACES station license is a provision in the current regulation that has been misapplied. (see.......) This provision should be dropped. Specifically, that section states that a Races Station (defined in ....) cannot talk to another RACES station. Legally that means two RACES stations LICENSEE. However it has been interpreted to mean that any Amateur licensee operating in the RACES (mode or activity) cannot talk to any Amateur licensee operating in a non-RACES activity. For instance, during the 1970ï¿½s a FEMA employee critized one of our California amateurs for allowing a Amateur operating in a RACES activity to call and talk to an amateur for a club (non RACES) who had telephone capable of solving a need. The FEMA person did not understand that it only to a RACES station licensee.

>landlines, cell phones, HF and VHF equipment available for use.

The California ACS is set up, drills, holds regular practice with
all amateur modes except CW...and integrates amateur
communications with other existing communications.

>In our case, cell phone lines were overloaded (useless), landlines were
>working, but were very busy. VHF didn't have the capability to reach out
>300 miles, and SSB was racked with QRN. CW was clearly the communication
>tool of choice at the time. Once the QRN cleared, we went back to SSB,
>which was clearly the mode of choice when readable.

During the 1994 Northridge Earthquake there was no damage
to the cellular telephone sites but, cellular being a part of the
telephone system, there was a period when too many tried to
call out through both cellular and landline telephone paths.
No problem to the local emergency/public safety folks since
they had planned for that, trained for that, were equipped for
that and did their job very well.

>Your side seems to think that local voice communication is the end all
>solution to every problem. I was merely showing that it was not, and that
>CW was still a good tool to have available.

"Your side" seems overly engrossed with CW because you
happen to prefer that mode. The California ACS has dropped
CW as any sort of emergency communications mode.

The 1994 Northridge Earthquake affected an area of about
40 by 80 miles. That's 320 square miles in area. No problem
here since the emergency organizations planned for that,
trained for that, were equipped for that and did the job well.

Ever hear of the Condor Net, Briny? One can talk on 223 from north of San Francisco all the way south to the Mexican border or cross state lines into Nevada or Arizona. Quite a bit more than "5 miles." California radio amateurs made it happen over twenty years ago.

Parts of California are definitely not flat (Mt. Shasta is over 14 thousand feet ASL and the surrounding mountain ranges begin at 4 thousand feet and go up and down and up and...). California has more unflat land than Pennsylvania. It has more flat land (the gigantic San Joaquin Valley) than Missouri...and some other flat states combined.

The California ACS dropped CW some time ago...and it has
already been through Real Emergencies...and it plans
ahead and more realistically by integrating amateur
communications with the rest of the governmental and
industrial-business networks.

California has a larger population, greater land area, more
and higher mountains, more and flatter land than Missouri
and Pennsylvania combined.

Well how many people have you save using CW?

Are you proficient in medical first aid, CPR, and AED use?

If thing are so bad that CW and only CW will get through,
you would probably do more good using your medical
first aid, CPR and AED skills.

I propose that that the FCC change 47CFR 97.503(a)
the require CPR certification.

Actually, if memory serves, NJ uses an extensive HF net that meets weekly
between the various Northern counties and the State capital. I remember
talking to a Hank something or other (old time ham) and he was waiting
for the 40m net to begin with Trenton. I forget which county he was from
but he mentioned that they always get tons o'snow. That was a CW contact
(going back a year or 3)

Come work a mini-field day with the FISTS CW Club of Coastal Georgia some day and see how much of what you just said holds true. To the contrary, almost all of the pro-CW folks I know, not only have great skill at CW, but build their own antennas, and equipment. Can you say QRP? It sounds to me like you're grasping at straws now, Rob. Good luck holding on.

hehe...One more thing I'm doing to stir up trouble in our club is trying to get everyone (well, some anyway) certified in first aid by the Red Cross. I think a requirement for a ham license is a tad bit of a reach, but the idea itself is good.

I didn't say that it has to be the former amateur who had the SAME call; just a former amateur who can't get relicensed and happened to pick your call.

> >Bootlegging usually is with the voice modes.
>
> "Usually"? What's the basis of such a conclusion? I'd be interested

On the basis that most of the bootlegging that goes on around here happens to be on 2m repeaters, and the mode certainly isn't CW. Anyone can bootleg using voice; no practice required. Not anyone can bootleg using manually generated morse code - such takes practice.

Anyone who has gone to the trouble of learning CW, etc., has no reason not to take the amateur radio examinations. That is my experience from being a volunteer examiner for 7 years and therefore meeting alot of people who have proven such.

[PS: As far as licensing is concerned, I am not in the "pro-code" group and do feel that the FCC's elimination of the higher speeds as a requirement was a correct action.]

Sorry - my mistake. Let me rephrase my question:

You previously wrote:

"but in reality ... on land there is not a need for >100km emergency traffic"

How do you figure that, Rob?

Will ALL future emergencies that occur on land only affect areas less than 120 miles in diameter? If not, then situations will arise where longer-haul communications will be needed.

In article <99tf4djmv1@news.netmar.com>, K0HB@qwest.net writes:

>We have about 10 months worth of figures behind us, and it appears that
>restructuring has had little effect on the total number of licensees, but it
>does seem to have put more people on HF.
>
>Looking at the no-HF/minimal-HF classes (Tech, Tech+, Novice) they have lost
>about 23,000 people since last April, and the full-HF classes (General,
>Advanced, Extra) have gained about 28,000.

Whether one uses "10 month" figures or the 11-month figures as of
the end of March 2001, the above isn't quite true for HF. I used the
end-of-March numbers compared to the end-of-April numbers to get
the following:

The total number of Extra, Advanced, General, Technician-Plus,
and Novice declined by 13,190 while the Technician (no HF
privileges) increased by 19,010. The overall number of all licensees
increased by 5,280 or a 0.86% gain over the end-of-April-2000 total
licensees [approximately 0.94% annual gain].

Looking at the NEW licenses issued shows 210 new Extras,
1010 new Generals, but 18,391 new Technician class. Despite
the restructuring with its lowering of the morse code maximum
rate, 90.85% of all new licensees were Technician class.

The trite old argument that "Technicians will not renew" once
they have reached the end of their first license period is not
borne out by FCC database figures. Between end of April 2000
and end of March 2001, the total number of renewals within the
ten-year period and during grace-period renewal was 26,200.
Of those, Extra-through-Novice represented 63.5% of all
renewals while Technician class renewals was 36.5%, a ratio
very much like the that of all licensee class ratios.

According to FCC database figures collated at the AH0A site,
there are still renewals of Advanced, Technician-Plus, and
Novice classes.

Based on the AH0A tabulated data, there are FEWER licensees
with HF privileges at the end of March 2001 as compared to
the end of April 2000. Fewer, not more. No "seems" about it.

You must work in computers like Cecil did. You digi's get brainlock
when required to think about anything else.
Who said anything about value other than that a ham who is CW capable
is of value when it is to be used? He's worthless if not.

"America's 1st Freedom" magazine. And I can't remember if it's high
school sports or all school sports. They quoted a book of statistics,
the title of which escapes me at the moment.

> >Magnitudes more are killed in automobile accidents.

> Key word there is ACCIDENTS.

I'm not convinced it's an accident when alcohol and/or drugs
are involved.

> > Punish the criminals, not the guns.
>
> How do you "punish" an inanimate object?

By sending it through a buzzsaw like they did in Australia.
If you don't believe that's punishment, how would you like
to be sent through a buzzsaw?

Some anti-gun nuts seem to think guns have a will of their
own.

Originally from the ACS network and in printed material
from that state office. After making the acquaintence of a
couple of local radio amateurs who worked for the city of
Los Angeles.

I and others have mentioned the California ACS website as
a convenient place to view their own words, particularly for
those who are out of state. The words do not differ from
their words printed on real paper using real ink.

Is the California ACS website "false and misleading"
because the ACS policy abandoned morse code mode?
Or is it "false and misleading" because it is a website?

>It couldn't have been as a volunteer - like some of the rest of us
>around here.

Oh my, aren't you something? :-)

Why don't you volunteer to argue a subject on its merits
rather than on casting implications on personalities?

Good luck with that one now.

Aw, don't worry, Larry, you probably won't have to go into therapy over the CW test after all. You should know the FCC is almost sure to drop all CW testing, probably along with any meaningful testing of any sort, after the treaty is changed. Till then, well, you'l still have something to bitch about. You've got a few years to find something new to replace CW testing with.

Again, since it has made nary the slightest dent in your skull, the only reason for hams to know CW is so that they can use it when it is needed, and IT IS sometimes needed. I know, having faced those circumstances, and not in ham radio either.

Being unable to get a license is only one of a number of reasons for someone
to bootleg a call. It is quite possible the bootlegger in person actually
has a call but for some reason would rather use Jeffrey's. (to suggest one
possible reason: because he wants to know what it's like to be DX without
actually travelling to a DX location)

The Titanic had plenty of flares. The problem, as I understand it, is that they were not the right color (white instead of red). And, back then, they were huge bottle rocket type affairs, not the small flares that could be carried on a lifeboat today. In addition, the flares burned for only five to six seconds, as opposed to the 60+ seconds of today's parachute flares.

Haven't heard this, but it wouldn't surprise me. It looks like a halfway
decent residential neighborhood surrounding it on most sides, and I'm sure
the golf course improved residential values too. The Hara does seem more
than a bit out of place at that location.

It stands to reason that a person who can bootleg CW can probably
obtain a general class license. It is not so apparent for voice
mode bootleggers.

Yeah, Cecil and for some reason you insist on keeping them from
learning the facts. Why is that?

My wishes have nothing to do with it. Reality is what matters. There
are just not that many techies even mildly interested enough in ham
radio to get even a nocode ticket. Your wishes are at variance with the
facts as usual, of course.

The discussion is the telegraph license in it's applicable timeframe,
it's not about not who did what elsewhere when. Divert maneuver = OFF.
U.S. commercial ships (over some size) could not put to sea without
having a Radio Officer who held a First Telegraph.aboard. And the only
way a Second Telegraph could upgrade was by spending a one year
apprenticeship under a First Class either at sea or at a coastal
station. A cw-proficient kid could make a helluva lot more money by
shipping out as a shipboard sparky than could a phone-licensed kid who
just twisted knobs at some BC station.

>kind in the last ten years?

No. There are presently three new power plants being constructed
in California.

>Sounds like they have a real handle on the long
>term planning game, huh?

The "California power crisis" was due to the controversial power
deregulation brought about in 1996 by the state congress. That
did not unduly affect any of the municipal power generating
facilities. At issue in primary electrical power is the purchase
price of power from other sources by PRIVATE (i.e., independent
business) power suppliers. The deregulation of private electrical
power has already begun in other states of the USA. The news
media highlights California's problems in electrical power because
it is the most populated state in the union, 33 million.

The California Auxilliary Communications Service has,
presumably like independent RACES, independent electrical
primary power emergency supplies. As an integrated
state-wide communications service it is tied in with other
infrastructure communications facilities. I do not know
precisely if the ACS has such emergency power but the
existing infrastructure certainly does...demonstrated by the
total electrical power loss to 10 million as a result of the
1994 Northridge Earthquake. None of the government or
untility company communications infrastructure was
unduly affected by that sudden electrical power cutoff.

I'm not "reclassifying" anyone, just looking at numbers tabulated
by a long-time radio amateur who is also the author of Morse
Academy and Ham Academy training programs.

>If not, please redetermine these renewals or upgrades
>and classify them as they should be, Technician w/ HF.

I'm just looking at license class totals. Since neither you nor I
regulate US amateur radio, I can't see how the judgemental
"as they should be" label applies.

>Also, how can you be
>certain of any of the Technician licenses now, being that since April 15,
>2000
>(except those previously licensed as novice), the only proof will be a morse
>code CSCE in hand which does not even show in licensing records...?

If the information isn't in the public record for everyone to see,
it isn't possible to be "certain" about any CSCEs. Please do not
ask the impossible.

FCC public records for all licenses, all radio services, are found
under the ULS page on their website. US radio amateur license
information is available in two forms: Applications (approx. 20 MB
in size) and Licenses (approx. 52 MB in size). Both are .ZIP
files. The License file will take about 2 hours, 20 minutes to
download at 49 1/3 KBPS (my average data rate with a 56K
V90 modem and ISP). All of the data field information is
explained on separate, much smaller files (see clicks at bottom
left of ULS page file listing). Feel free to download anything you
have access to, un-zip it, sort the information, total whatever you
can organized by whichever way you want, and tabulate it in a
form that everyone can look at...and be judgemental about. :-)

Joe Speroni, AH0A, does all that downloading, sorting, and
tabulating, makes it available free of charge on his website.
Even though Joe is an obvious morse code booster, his efforts
in doing the data presentation each month deserves a long
round of applause from everyone through that volunteer service,

available to PCTA and NCTA alike..

I did not take any issue with CSCEs or with any data that was not publicly available to all. I merely put up a counter argument against Hans Brakob's assertion that "there seemed to be more HF-privileged hams available" under post-restructuring period, based on publicly-available data available to both of us.

As far as the post-restructuging period is concerned, I do not see much of a difference in licensing AS A RESULT of restructuring other than a lot of "lower" class licensees "upgrading." The total number of licensees shows a very slight gradual gain (just under an equivalent annual increase of 1 percent). As far as NEW licensees are concerned, it would seem that newcomers are going for the no-code-test Technician license far more than any General or Extra class license:

>> Looking at the NEW licenses issued shows 210 new Extras,
>> 1010 new Generals, but 18,391 new Technician class. Despite
>> the restructuring with its lowering of the morse code maximum
>> rate, 90.85% of all new licensees were Technician class.

Not only that, but RENEWALS' numbers don't show the PCTA previous claim that no-code-test Technicians "will not renew:"

>> borne out by FCC database figures. Between end of April 2000
>> and end of March 2001, the total number of renewals within the
>> ten-year period and during grace-period renewal was 26,200.
>> Of those, Extra-through-Novice represented 63.5% of all
>> renewals while Technician class renewals was 36.5%, a ratio
>> very much like the that of all licensee class ratios.

It does not seem to be true that no-code-test Technicians are "dropping out" en masse as predicted by the PCTAs.

Unfortunately for the PCTAs, the total number of all classes which do or did require a code-test for that class are still declining. In the 11-month period following April 15, 2000, the total number of code-tested license classes decreased by 13,190. Had it not been for the 19,010 license class increase of Technicians the overall number of amateur licenses would have declined.

It can be argued that the Technician class totals increased "because" of the transfer of Technician-Plus renewals to Technician. Unfortunately, that argument is degraded by the number of NEW Technician license grants which are NOT renewals: 18,391. Those "transfers of renewals" account for only 619 Technician class license increases (19,020 minus 18,391). That 619 "renewal transfer" number is 3.3% of the Technician class increase.

The trend in US amateur radio license classes should now be clear. The Technician class licensee is still the largest

class (now 32.9% at end of March 2001) and continuing to
grow (was 30.3% at end of April 2000) and (surprise) is
being renewed. The total number of code-tested license
classes is still dropping; the 619 "renewal transfers"
of Tech-Plus to Tech in the 11-month period represents
only 4.7% of the total code-tested-class decline of 13,190.

I'm sure (no, make that certain) that you think telegraphy is the primest of the prime qualities in radio...in the 1950s or in the 2000s.

You asked a (somewhat snarly) question asking me if I'd already had a commercial radiotelegraph license in 1956. I said I didn't and presented some opinions against it, again in the 1956 time-frame.

>U.S. commercial ships (over some size) could not put to sea without

I was 23 1/2 when I got my commercial First Phone in 1956, senior. Why should everyone have to lust for a life at sea? :-)

Chances are a "phone-licensed kid" who rode gain at a broadcast station could make more than you think they could in 1956. :-)

>>Was there a need for radiotelegraphy in long-
>>haul commercial HF communications? No.

No, because all your concentration is on ships and shipping for radio use, emphasizing CW. I'm thinking communications of every mode and I remember RTTY and commercial sideband as predominating other modes and modulations on HF in 1956,

exclusive of ham bands.

In my personal experience in the US Army Signal Corps of 1953 to 1956, the Army's trans-Pacific HF network connecting Seattle, Anchorage, San Francisco, Honolulu, Manila, Okinawa, Saigon, Pusan, Seoul, and Tokyo did much more than send bills of lading. ADA in Tokyo was a larger medium-size station with 42 transmitters ranging from 1 KW to 40 KW. ADA's monthly message average in 1955 was 220,000, all of them on teleprinter. No OOK CW used anywhere on that net. WAR (Washington Army Radio, gotta love that callsign!) had a 1955 monthly message average of 1.2 million, all on teleprinter. The Army had other networks in other theaters of operation on HF as did the USAF and USN (for fixed-base to fixed-base, land to sea still used CW).

Since you mentioned RCA, the pre-WW2 and just post-WW2 RCA Globecom service was primarily teleprinter (I can't recall any Globecom veteran ever mentioning CW). Some of the pre-WW2 commercial networks and companies are shown in the beginning of the "Collins SSB Book" by Pappenfus, Bruene, and Shoenicke. SSB really began on landline around 1918 as "carrier" frequency-multiplex equipment...which was then used almost intact on radio SSB for 12 KHz wide, four-voice-channel-bandwidth circuits by commercial communicators.

>>Where is radiotelegraphy even used today? On some

Wonderful, you have ONE example. Did you get a call sign to prove it was not a ship or coastal station? If it was sending gibberish, how do you know what it was? [sounds like a "numbers station" sending encrypted messages]

Try tuning the entire HF band (or even just below the MUF) and total the types and kinds of modulations outside of amateur bands. A broadband antenna will help. Sounds of various HF modulations are available as WAV files on a couple of websites, the ARRL's included.

>>Why would anyone back then have wanted a commercial
>>radiotelegraph license for non-shipboard radio?
>>
>Where did I even intimate otherwise?? Divert=OFF again.

Then why did you ask if "as a 'with-it' communications professional, did I already have a radiotelegraph license" in 1956? :-)

[your divert switch is broken...]

Source record: 6315

Then, any conclusion based on the statistics you've used will be incorrect because they don't account for these issues. The only question then will be: Is the error caused by these issues material? I say that it is, because by 10 years time (and we've had 1 year - therefore 10% of that time period), there will be NO Technician Plus entries in the FCC database, yet all those who did not upgrade will still have HF priveleges. To measure those with HF vs. those without cannot be accurate.

The best that you can hope for in correcting this is to go through a copy of the FCC database (or a copy) as it existed on April 18, 2000 (since the first restructuring upgrades showed up on April 19, 2000) and identify all those technicians with HF and novices that are now listed as merely technician and adjust (move them from "no HF" to "HF"). This information is available - why aren't you using it?

There will always be the CSCE problem introducing an error, but at least, you'll eliminate the other error.

> round of applause from everyone through that volunteer service,
> available to PCTA and NCTA alike..

And he's not the only one. However, like many of the more well known sources (Buckmaster, QRZ, etc.) who also stamp CD's, I bet that his program suffers from the same fault - failure to retain HISTORICAL records. Most callbook programs that I have seen will retrieve ONLY the current record (with perhaps a link from an old call to the new one). I have my own copy of the database, and I don't do a "replace" when a record is updated; I have it do an "add."

Also, why downloading the DAILY UPDATE files (alot smaller) hasn't occurred to you is beyond me?

[See below for an example:]

> I did not take any issue with CSCEs or with any data that was not
> publicly available to all. I merely put up a counter argument
> against Hans Brakob's assertion that "there seemed to be more
> HF-privileged hams available" under post-restructuring period,
> based on publicly-available data available to both of us.
>
> As far as the post-restructuging period is concerned, I do not see

Example of Historical lookup:

Call to search: AH0A (since that was the only call appearing in the msg)

Callserver: Database current as of 02-Apr-2001

AH0A JOSEPH P SPERONI Lic Iss 04-Jun-1997
Extra 4700 AKEMAMA Lic Exp 16-Mar-2005
DoB 09-May-1938 LAWAI HI 96765-0900 Lst Upd 04-Jun-1997
USA

E-Mail Joe@Speroni.Com

AH0A JOSEPH P SPERONI Lic Iss 16-Mar-1995
Extra PO BOX 769 Lic Exp 16-Mar-2005
DoB 09-May-1938 SAIPAN MP 96950 Lst Upd 16-Mar-1995
USA Revised 04-Jun-1997

AH0A JOSEPH P SPERONI Lic Iss 21-May-1985
Extra PO BOX 769 Lic Exp 21-May-1995
DoB 09-May-1938 SAIPAN MP 00000 Lst Upd 21-May-1985
USA Revised 16-Mar-1995

Now, if he were currently a "technician" but previously a "tech plus", a
HISTORICAL database would show that. In this case, all I have is two prior
entries of the same class.

>(SNIP)...in order to substantiate their rank, status, and position in USA
>amateur radio that came about through that skill....(SNIP)

Lennie's usual "proletariate vs burgeuois" (pardon the spelling) spin.

Still not true nor accurate, but it makes Lennie feel like he desreves to
be on the pedestal he has created for himself.

>This locality has organized and
>drilled for such emergencies and it worked fine. [others
>in here have bitched and moaned that Their local
>communities "cannot afford such things" but that is just
>ignorant rationales at making their message points to
>"prove they are right"]

California, if it were a seperate republic, would have the 6th largest GNP
in the world. THEY can afford it.

That YOU, Lennie the Impotent, consider it "ignorant" that we know our own
circumstances better than YOU, is arrogant.

>The state of California (population about on par with
>Canada) has an Auxilliary Communications Service
>or ACS that integrates amateurs with professionals
>into a unified emergency communications structure.

Now you admit that Hams ARE a part of ACS. You have previously asserted
that ACS did not use Amateur Radio nor Amatuer Radio Operators.

>A number of PCTAs have decried the ACS with the
>usual geographic bigotry exhibited by eastern US
>and some midwestern US residents.

Yes, Lennie...I guess YOU would consider it "bigotry". Again, the above
delineates the difference between emergency services available in regions with
a high per-capita income as opposed to other areas that don't enjoy that
deep-pockets tax base.

THAT'S bigotry.

>The ACS still
>exists, works, and drills successfully for the citizenry,
>not for fulfilling some pipe dreams of past glories or
>exaggeration of past accomplishments demonstrated

>by the PCTAs in here.

You really are a very sick, mentally depraved person, Lennie. You really do believe this crap, don't you?

Putz.

>The ACS model is being
>picked up by some other states of the US.

I have a model of a C-5B, Lennie. Doesn't mean I can own one.

>My father suffered a single, fatal heart attack in the

>be saved.

My condolences on your father's untimely demise. Hopefully the proliferation of AED's and other devices will help to take the edge off of sudden cardiac death.

if im driving down the street ... and happend accross an accident i more
than likely would be far more qualified to perform first aid on the person
than any witnesses ... and thus i would have them call out on the radio
while i attended victims ...

that aside ... if i were alone ... i could send a voice mayday etc far
faster than you could on cw ...

and at very last ... try sending cw while performing cpr! its much easier to
use a handmic on a ht !

What formula would it be that you are using? Does your antenna have a
square radiation pattern? If you are trying to argue a point in a room full
of people that heartily disagree, you have to watch things like that. You
stated this as "fact". Fact is, the area of a circle is pi(r^2). Things
like that can really blow your credibility.

>I'm just looking at license class totals. Since neither you nor I
>regulate US amateur radio, I can't see how the judgemental
>"as they should be" label applies.

Ah yes...Let's "ignore" the fact that the FCC does not presently define any difference between "Tech" And "Tech Plus" since the difference in the numbers will significantly alter Lennie's rants.

Again.

>If the information isn't in the public record for everyone to see,
>it isn't possible to be "certain" about any CSCEs. Please do not
>ask the impossible.

Yes, don't "ask the impossible". Heaven forbid Lennie was proven wrong. Lord know's THAT has never happened. (yeah...RIGHT!)

>I did not take any issue with CSCEs or with any data that was not
>publicly available to all. I merely put up a counter argument
>against Hans Brakob's assertion that "there seemed to be more
>HF-privileged hams available" under post-restructuring period,
>based on publicly-available data available to both of us

His "seem(ed)" based, of course, upon the experience of a person who both HAS an Amatuer License, and is ACTIVE with that license.

Furthermore, even if he was "wrong", it was still an opinion, not an offering of fact. Ergo your dissertation was done not as a "counter argument" to Hans, but as the potentiator of an argument.

Not that we expect anything less.

>As far as the post-restructuging period is concerned, I do not see
>much of a difference in licensing AS A RESULT of restructuring
>other than a lot of "lower" class licensees "upgrading.

Ah yes...Lennie sitting behind his computer screen once again pontificating on the impact of regulatory changes based upon numbers he reads on that screen...NOT practical experience...NOT participation in club activities...NOT as a licensee.

Again.

>It does not seem to be true that no-code-test Technicians are
>"dropping out" en masse as predicted by the PCTAs.

Definitive numbers? Or more emotional pontificating?

>Unfortunately for the PCTAs, the total number of all classes
>which do or did require a code-test for that class are still declining.

Nothing unfortunate about it for me....The more Hams the merrier.
Regardless of WHICH band I work 'em on. Of course THIS is an experience you
can't know, Lennie.

>It can be argued that the Technician class totals increased
>"because" of the transfer of Technician-Plus renewals to
>Technician. Unfortunately, that argument is degraded by the
>number of NEW Technician license grants which are NOT
>renewals: 18,391.

And is further diluted by the number of those NEW "Technicians" that are
obtaining a CSCE for 5 wpm at local VE sessions and are subsequently taking
advantage of the FCC's ruling that if they have that CSCE in thier possession,
thye make take advantage of "Tech Plus" priviledges.

I have signed several (12-15) CSCE's granted for the 5WPM test only by
persons holding a Tech.

>The trend in US amateur radio license classes should now
>be clear.

Yes, Lennie, it's clear....that no matter what the numbers show, you're
out there and the rest of us are "in here".....

Jeff:

My last shipment from the QSL Buro included 4 QSL cards from stations I had not worked. This has occurred to me several other times throughout my ham career, involving my last three callsigns (N3CRA, WR2F, K3LT). I'm sure I'm hardly the only one being bootlegged; I'd be curious to know how extensive this phenomenon really is. I'd also like to know what can be done about it, although I suspect that not much, if anything, could be.

square area ... why not ? ... area of a circle ... pi * r^2 ... ...
100kmx100km grid ... what section of area a station (comm center) may be
responsible for ... of course in real life you would have a 10 x 10 ... but
thats beside the point ...

fact is ... an ssb can have reliable comms up to 100kms easy ... assuming
the operator isn't deaf

Any person that calls for CPR help on a CW net is not properly
prepared for such emergency. The help provider must start CPR
immediately and call 911.

All of which raises a very interesting question. How do you for
help on the Internet? This discussion group should know,
because after WRC 2003, it will be important.

Keep in mind, I don't remember anything of the sort. I may have
exchanged one or two e-mails with a friend of Cecil's, in which I
may have simply stated my position on whatever matter was being
discussed at the time. I never "harassed" anyone "without end,"
because, in addition to the fact that I would still be doing it right now
(which I'm obviously not), I have never had any inclination to do any
such thing to anyone. Like everything Cecil says, it must be taken
with at least 7,000 grains of salt.

jj:

Speaking as someone who isn't an old, cynical, name-calling, holier-than-thou, or vulgar-as-hell "example" of hamdom, I totally agree with you. Note I omitted the bit about being a "fart," because I do occasionally indulge in that activity -- usually after a visit to Taco Hell.

>Let's hope they never learn they are
>not "real hams"

Who is saying they *aren't* "real hams, jj? So far, you're the only one who's made an issue of it.

because they would probably joins the ranks of former and
>inactive hams, of which we have far too many already

I disagree. I don't think we have nearly enough former and/or inactive hams. Those out there who are bootlegging my call sign on-the-air, as recently as January, would do me and the ARS a great service if they would become "former and inactive" hams.

>(and in my opinion,
>there are a whole bunch of you who should be in the category but aren't -
>you and the rest of us would both be much happier I think if you were to
>stop your tirades and tantrums and take up woodworking or needlepoint to
>fill your idle hours).

Just what *is* your problem here, jj? Personally, I'm more than willing to live and let live whenever new hams show up on the local repeater, as long as they aren't doing anything illegal, against club policy, or deliberately annoying. It sounds to me like you're hollering long before the hammer drops on your foot.

Hint: Don't judge us rrap'ers as hams by how we appear to behave on Usenet. This is NOT ham radio; never was, never will be, and we are intelligent enough to understand the difference. So stop whining about how you *think* we would behave on-the-air if you don't have any direct experience.

2036. Re: Restructuring -- did it make a difference

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-05 01:34:11 UTC
From: n2ey@aol.com
Message-ID: <20010404213411.25479.00000559@nso-fz.aol.com>
Source record: 6338

Here are some numbers from the AH0A website to consider.

From March 31, 2000 to March 31, 2001:

- The total number of US ham licenses rose from 677,784 to 684,359 - a gain of 6,575 (1%)

- The total number of Extras rose from 75,985 to 95,243 - a gain of 19,258 (25.3%)

- The total number of Advanceds dropped from 103,048 to 88,082 - a loss of 14,966 (14.5%)

- The total number of Generals rose from 109,787 to 136,056 - a gain of 26,269 (23.9%)

- The total number of Technician Pluses dropped from 133,688 to 96,145 - a loss of 37,543 (28%) (See discussion)

- The total number of Techncians rose from 204,646 to 224,867 - a gain of 20,221 (9.9%) (See discussion)

- The total number of Novices dropped from 50,630 to 43,966 - a loss of 6,664 (13.1%)

The above totals are for individual licenses. Note that from a percentage viewpoint, the fastest growing class is the Extra, while from a number of licenses viewpoint, the fastest growing class is the General.

Since April 15, 2000, the FCC has renewed all Technician and Technician Plus licenses as Technician. Also, a ham who holds a Technician license and has passed Element 1 (5 wpm code) has Novice/Tech Plus HF privileges, even though the database simply shows "Technician" as the license class. There is no easy way to determine exactly how many Techs are actually Techs with HF, because the FCC does not keep that information in its database. A lower bound on this number can be found by adding up the number of Technician renewals from April of 2000 until October of 2000 (3273) This works out to an average of 467 per month, or 5,604 per year, being reclassified from Tech Plus to Tech because of renewal.

There is also no easy way to determine the number of upgrades for most of the classes, because upgrades are recorded as "modifications", just like address or name changes.

The total number of "lots of HF" licenses (General/Advanced/Extra) rose from 288,820 to 319,381 - a gain of 30,561 (10.5%). This is what K0HB is referring to in his post - more hams with lots of HF privileges.

The above figures reflect only one year's change, starting on the eve of restructuring. It will be interesting to see how the trends evolve over longer time frames.

It wasn't the quantity that was the problem. It was the fact that those on
board the Californian didn't know what the rockets meant.

> Aren't all
>present day lifeboats equipped with flares?

I suppose so - but not so in 1912. You see, the professionals had determined
that the probability of a ship the size of Titanic sinking before help would
arrive was so low as to be of no concern. That's why there were not enough
lifeboats for all on board, no flares, rockets or even flashights in the
lifeboats, no lifeboat drills, no binoculars for the lookouts, etc., etc.

Often more is learned from failure than success.

i have operated a class c on my own ... solar powered ...

and last year was with vo1aa in nfld ...

actually ... antenna design (simple anyways) is part of the licencing here
... as well as station setup ... simple block diagrams etc ...

writes:

>Here are some numbers from the AH0A website to consider.
>
>From March 31, 2000 to March 31, 2001:

Ahem...that period begins two weeks before restructuring.
Hans Brakob used the 10-month period following
restructuring...which I should have done too...

>Since April 15, 2000, the FCC has renewed all Technician and Technician Plus
>licenses as Technician.

For Technician-Plus license class the renewals can only be
between 10 and 8 1/3 percent of all Technician-Plus
licensees. The assumption seems to be that TechPlus
renewals all abrogate their ability to "upgrade" but that
doesn't seem to be the case.

For the Technician class licensee, the number of renewals
will be small compared to all other classes because their
initial numbers were small. The Technician class has been
renewing regularly since their first license term expired.

>Also, a ham who holds a Technician license and has
>passed Element 1 (5 wpm code) has Novice/Tech Plus HF privileges, even though
>the database simply shows "Technician" as the license class. There is no easy
>way to determine exactly how many Techs are actually Techs with HF, because
>the FCC does not keep that information in its database. A lower bound on this
>number can be found by adding up the number of Technician renewals from April
>of 2000 until October of 2000 (3273) This works out to an average of 467 per
>month, or 5,604 per year, being reclassified from Tech Plus to Tech because
>of renewal.

There is a more sure to determine the number of
Technician-Plus renewals that were made Technician or
to separate the originally-Technician-Plus from Techician
by going to the NEW license, RENEWED, and RENEWED
WITHIN GRACE PERIOD tabulations. Since there are no
new Technician-Plus license class grants, one can
simply subtract the new Technician license number from
the Technician class total to see the number of
Technician-Plus renewals transferred to Technician class.

The surest possible way to ascertain of who went where to
what is by downloading the Amateur database on a regular

basis and searching all records. :-)

>The total number of "lots of HF" licenses (General/Advanced/Extra) rose from
>288,820 to 319,381 - a gain of 30,561 (10.5%). This is what K0HB is referring
>to in his post - more hams with lots of HF privileges.

The total number of Extra-Advanced-General-TechPlus-Novice
licensees DECLINED by 13,646 while the Technician licenses
INCREASED by 20,221. While those numbers for 12 months
could be massaged more, it represents a bad comparative
time since there were delays in licensing and class reassignment
for up to two months following April 15, 2000 (see ARRL news
for that period). It would be better to go back to the original
Brakob 10-month period and see the numbers from the end of
June 2000 to March 2001.

In the 10-month period the number of total Extra-Advanced-
General-TechPlus-Novice licensees DECLINED by 10,943
while the Technician INCREASED by 16,029. The net gain
was 5,086. It is still growth. Of the Technician class increase
15,970 were new licensees exclusive of any TechPlus
renewal reclassification. That leaves the Technician class
total change "off" by only 59 "others," presumably from the
TechPlus renewal reclassification. Those 15,970 new
Technicians still don't have any HF access with/without
CSCEs.

There is no valid way to explain the Extra-through-Novice
class total decrease of 10,943 by any "Tech-Plus renewals
to Tech." Attrition is happening among the code-tested
classes.

>... It will be interesting to see how the trends evolve over
>longer time frames.

Why? The trend is still clear. The number of no-code-test
Technician licensees had been steadily increasing before
April 15, 2000, and one cannot deny that they are still
increasing exclusive of any Tech-Plus renewal
reclassification to Technician. Technician class licensees
ARE, in the majority, renewing in that class.

The TREND has been present for a long time. It is un-
fortunate that so many PCTAs keep denying the obvious.

> distribution in addition to every state in the country.
>

Bottom line: another level of government bureacracy has been created,
with the
usual (unstated) mandate that the first order of business it to
perpetute itself, and that of course means 'get the numbers up, however
it an be done'.

> In so far as we know, our program ï¿½ the leader in the nation ï¿½ is the only

Pretty much like everyone else. But when did state or county
governments ever participate in amateur radio at any level?

> b. The US Coast Guard also eliminated the use of morse code several years
> ago, which is further evidence of its lack of applicability to todayï¿½s
> communications needs.

Wrong. It was done as a moneysaving device in that it eliminated the
requirement for a skilled operator, coupled with fact that technical
developments
now allowed for automatic emergency signalling without human
intervention. But the new system is far from foolproof. Duties formerly
performed by the radioman are now routinely assigned to busy deck
officers who already had their hands full and who often turn off the
annoying alarms because of falsing.
The new systems are better in some ways, and far worse in others. In no
way to they replace the thousands of humans who once had their full
attentions to the
radio distress frequency. Any distress call was immediately heard far
and wide by a great many operaors in a great many places, both on land
and sea, and getting the closest help started immediately toward the
distress location was assured. The satellite alarm system is automated,
with all calls going essentially through a single system to a single
point, and the exact nature of the problem that caused the call cannot
be determined by the operator who receives it. There is no direct
contact with the vessel in distress nor humans aboard. The system, while
streamlined and technically sophisticated, is nowhere nearly as
thoroghly capable from a communciations point of view.

> Today, our information systems are based computer based and operate by both
> wire and wireless. If the Amateur of today is not familiar with computers
> he/she is of little use.

Typical codebasher's strawman. What ham today isn't familiar with
computers?
And who says that non-computer communciations are less capable of
getting the job done? He is simply wrong.

A background in computer experience and knowledge
> is far and away more important than that of CW.

True. Until the computers are no longer useable and CW still is.

> When I became licensed in 1941 Amateur radio was the means of alternative

Ah so! This guy is a Founding Charter Member of NCI! He, like Squiggy,
Soulful Bill and Fast Freddie, never heard of learning Morse code
because it is actually useable and in fact IS the basic means of
radiocommunications.

Without the ability to look to the
> future, or grasp the many changes occurring around them, they would keep
> practices long since useless.

Useless only if hams are unable to use them when the need arises. When
computer lines get cut or broke in an earthquake or hurricane, now THAT
is useless.

In government today we pass data digitally,
> not by CW or voice radio. In fact, there are government agencies who seek
> to do away with radio entirely.

Yep, there are some bureaucrats out there who are that stupid.
Meanwhile
"wireless" grows by leaps and bounds...

> One of my constant battles is to keep some radio capability functioning in
> government. There is a new breed of administrators who focus on the bottom
> dollar, not redundancy. Often they have no experience in communications
> failures, and their digital computer networks have not failed. They see no

> fiscal year has just begun and yesterday I was informed that there are no
> funds for communications equipment as it all went for computer systems.

Stupidity is not limited by education nor position in government. I've
seen a little of that myself.

> So, I urge the reduction of code requirement to 5 wpm at general license
> level as it is not essential skill qualifier in todayï¿½s world.

With that I agreed 100%. And said so in my comments to the FCC.

When it is
> possible to do so under international radio regulations, I further urge the
> Commission to drop the CW requirement entirely. It is not relevant to the
> year 2001 and subsequent real-world needs in communications.

Lets see if I've got this - he says that many governmental officials
want to dump radio completely, therefore the most basic
radiocommunications mode, which has been successfully used worldwide for
over a hundred years is simply no longer applicible (it must be assumed
that his statement covers all circumstances)kin the world today just
because there exist computer networks and high speed digital
communications systems. Right. That makes about as much sense as saying
that since there are Concords flying there is no longer any need for a
DC3 anywhere for any reason.

> I urge the Commission to adopt a requirement of computer ability, at least
> at the general level.

I agree.

Knowledge of technical digital information is not
> important.

Not so fast. The basic knowledge level is overlooked only at risk of
losing our status as what the FCC calls a "fundamentally technical
service".

There may be those who will assert that test should include
> questions on Amtor, Pactor, Clover or such. The problem there, however, is
> that such modes are already out-of-date. To lock the testing into them is

That's where the commercial/governmental demand is, and where we use it far less than could ever justify keeping all of it. You can expect losses up there. It's as good as done, AFAIC.

One of my favorite straight keys is a Navy type from 1940 that has a
roundtopped knob.

Most of the nocode hams at Intel are techies. I have no reason to
believe that Intel is unique among technical companies.

Stick it Lenny, 90% or more HF ham emergency comms are successfully
handled with ssb, a bunch is with RTTY and cw only comes into play
when all else fails. Which has happened only on rare occasions but it
has happened. The only name of the game in local neighboorhood
emergency comms is 2m FM. Whatta blowhard.

Well, it makes sense and if it happens, I am sure they'll find somewhere else to host it. Shoot, maybe they'll find someplace that has air conditioning when it is hot and heat when it's cold. Hara has neither. I would like to see it moved.

Rob, whatever you do, P L E A S E do not allow yourself to be lulled by some "enlightened muse" that Lennie tries to portray.

First of all, Lennie's assertions of ""superiority" by Amateurs is absolutely ludicrous. Lennie himself will post and re-post ad-nauseum his own "CV" in order to "impress" people with his OWN "rank, status, priviledge", and then as soon as an Amatuer Radio Operator even alludes to some skill or knowledge, he is assailing them as "braggerts".

This is especially true in any knowledge or skill he does not possess. Of course Morse Code is the most visible of that, but it's not the only source of contention for Lennie. He continues to this day to try and insist that his experience as a "professional" exceeds that of and "amateur". Inside the box, this may be true, however "ham" radio is NOT "professional" radio, and the PRACTICE of radio TECHNIQUES and programs are NOT the same. Here is where Lennie fails.

Secondly, Lennie denies, even vehemenetly refuses, to become licensed in the Amatuer Service himself, insisting that most of us are "Nazi", "jacbooted thugs" or "brownshirts", but will then state that he is doing what he does "for the betterment of the avocation".

He does nothing of the sort.

And why would someone who insists that an entire subset of society is akin to Nazis spend YEARS in various newsgroups, almost EXCLUSIVELY related TO Amatuer Radio...?!?! Please go back through old USENET archives and find Lennie in any one of his many personalities..."NoCWTest", "Lenof21", "Lenover21", "AveryFine" among others.

I have found archives going back to 1995 just on his AOL ISP. I know there are others. Seems to me he is pretty obsessed with telling Hams how we SHOULD be doing things, yet he is not willing to invest anything in it himself.

To be sure, Lennie knows the inside of the box. Lennie was an electronics technician, and at one point had some engineering experience. Despite a 40+ career in RF technology, however, it seems his only formal published works was in a long-since-failed ham radio magazine.

>>Ergo, whatever They have done in Their locality is better, stronger,
>>more robust, more resistant than any of the public safety
>>or public communications.

More arrogance, Rob. Lennie insists that since California can afford to implement a massive "professional" disaster relief communications system, then "OBVIOUSLY" all localities can do this.

Furthermore, Lennie insists that Hams have little or no impact on disaster relief or emergency communications anywhere, yet on-going media sources (and NOT just from Amatuer magazines) proves this to be false.

No one here, myself included, has EVER stated that an AMATEUR radio net, REGARDLESS of the mode, was "stronger" or "more robust" than that of ANY public safety service.

These assertions are "extrapolations" that Lennie has drawn from comments made that DID state that Amatuer nets are STILL necessary, viable and embraced by various states and communities as back-ups to the governmental services or to fill in when failures occur.

Despite the arrival of the 21st century, holes STILL exist in the radiocommunications infrastructure. And even where that infrastructure IS "robust", Mother Nature has a real bad habit of taking the works of Man and laying waste to them in short order.

Recent weather disasters in the United States has proven this true. One F4 tornado can clean a swathe of several miles of cell towers, repeaters and other communications assets. It is, therefore, the ability of the Radio Amateur with his/her mobile and or portable stations to enter the disaster area and set up even primitive services where we "shine".

And we are not alone. Recent earthquake disasters in Turkey and India have again borne out the contention that private citizens with portable communications assets are often the ONLY assets available, not only in the United States, but abroad.

Lennie asserts this is not true, however every major news media have recently reported on those very same facts.

When it comes to anything that Lennie has to say, Rob, it's "Caveat Emptor...Let The Buyer Beware"......

I nearly fell out of my chair tonight watching "Titanic" on The
Discovery Channel. The reenactment of the CW operator showed him
tapping out CW using only his index finger. If Dick saw that, I'm
sure someone had to carry him to the emergency room.

Sure, there's always a better, more modern and efficient (from some
viewpoints)
way of doing most anything - invariably with its own set of
shortcomings, many of which were/are not present in older, less
sophistcated systems. The driving force
is economics. The cheapest system that provides acceptable results will
be the one that is adopted.

Reality check, Jeffie! Why would anyone do that?

Far more likely than your "bootlegging" scenario, the fellow is either:

1) Sending his call inexpertly, so it sounds like "KH6O", or
2) Being copied inexpertly, or
3) All the above.

If you know his 10-10 number, send it in to Ten-ten International and ask who
has that number. My guess is that it belongs to someone with a call like
K5BO, KH6MT, KH6TM, KS6O, or similar.

Robbie my boy, you ain't getting it. There are two kinds of emergency
situations hams handle: The first is the ham finding himself in the
middle of an awshit and getting immediate help by whatever means are
at his command. Some repeater, his cellphone, whatever. Occasionally
those become regional like ice storms, etc. Beyond that cometh the
wide-scale natural disasters in far off places where hams get involved
in handling all the great heaps of, typically, Red Cross
administrative comms and health & welfare traffic sometimes for days
on end following the event. Usually several times a year.
>
So yes Robbie, there are times when hams shoot skip to run long-haul
disaster relief traffic bwtween the U.S. and other countries which
allow third party handling. When the lights go out in Costa Rica it's
a 1700 Km shoot to Miami. You might have noticed that we tend to do
things on a bigger scale down here in the lower 48 . . .

Keys must have evolved over the years. The key used in the depiction
had an upside down tear-drop shaped "knob". There wasn't a horizontal
surface anywhere on the knob like there is on a J38.

My observations had nothing to do with telegraphy.

I simply observed that the record shows that:

1) The no-HF/minimal-HF amateur license classes (Tech, Tech+, Novice) have lost about 23,000 people since last April.

2) The full-HF license classes (General, Advanced, Extra) have gained about 28,000 during the same time period.

The latest QSL card was received from KP4XA in PR; the contact
he had with "KH6O" was on 10m SSB. So you're accusing Terry, KH6MT,
in FL, of bootlegging my name and call on SSB. You're opening
yourself up to a defamation of character lawsuit by him, Hans.

> Now don't you feel silly with your "bootlegging" conspiracy rant?

Whatever...

No, smacko, the lights going out in Newfie country would not usually
warrant an international Red Cross or a UN or a U.S. ham radio
respose. But if some natural disaster pops up there and kills bunches
of people it might hapen if Ottowa can't cut the mustard and hollers
for international help to bail the Newfies out.
>
In some uncounted number of instances going back decades ham radio has
been the only means left for communications with the "outside world"
after a major disaster and it's done on HF. Very few of those comms
involve actual life & death comms which can obviously only be handled
by personnel near the scene. Nobody in their right minds will try to
summon paramedics on 40m cw (although that stunt has been done, too).
>
It's called long-haul disaster relief communications. If you can't do
4,000 kMs in your own country you're not much of an asset in the big
picture. But keep yer HT batteries charged, ya just never know . . .

For what it is worth, how difficult is it to hook up a computer and let the machine send and receive the code? I doubt most bootleggers would do this since it might entail just a bit of work; regardless, the question remains - how would anyone know that the other individual can or cannot send or receive CW? Computers make this relatively painless.
A simple solution might be to change the testing. Everyone gets a piece of paper and a pencil. They sign their name and put the date on the paper. After the papers are collected, the VEs simply check drivers licenses and see if the names were spelled properly. 50 points for the proper spelling of your own name and 50 points for getting the date right. 50% would be a passing score. That would be the general. For the extra, you have to spell the name of the city, town, or village you reside in. Correctly guessing the answer counts. Passing would require two out of three correct answers (name, date, location). Extra classes could apply for and obtain 2X3 calls, others would be issued either 3X3 or 3X4 calls.

about
> 28,000 during the same time period.

For period March 2000 to Dec 2000.

A. The full-HF license classes (General, Advanced, Extra) gained 27,628.

B. The token-HF license classes (Tech plus, Novice) dropped 38,802.

C. The all HF license classes dropped 11,174.

D. The VHF/UHF only class gained 14,577.

E. All licenses classes gained 3,403.

The effect of Tech Plus class being renewed as Tech will not
be seen until 2001. You will see the VHF/UHF class gain
jump up to 20,000 by April 2001. It is estimated the Tech Plus
renewal account for about 5,000 of the gain.

It is know that less half of eligible amateurs renewed their
license at the end of the ten year term.

I leave you to draw your conclusions on the meaning of these trend.

Larry KC8EPO

There's a lot more to actually putting up a real live antenna than block
diagrams and multiple choice Q & A.

Seems to me, even if there were full-time radio operators, they would today be using the satellite system for communications using a modulation system other than OOK/Morse. In this modern day and age, HF/CW is simply not the best choice.

making a dipole is basic ... cut two 1/4 waves ... there we go ... a dipole
...

i have no idea what we logged last year ... albeit cw got more points (since
multiplier was 2) but we certainly scored an equal number of qso's on either

as for my mobile ... well ya ... its basically just a go ahead and operate
... but getting a mobile that works nice is hard enough

"Acceptable results" being the key concept. When one can get acceptable results for less money, that is a good thing. Why pay more than you have to for the same acceptable result?

If the Titanic and California had had the present day satellite system in place, many more lives would have been saved by a system that, unlike CW operators, never sleeps.

The Titanic episode directly caused changes to radiotelegraph
operations such that there was never again a time when such an incident
could happen. New procedures and systems such as the Autoalarm system
were put into service. If Autoalarm had been in use the night the
Titanac sank Californian would have been alerted and probably saved most
of the lives that were lost - even though Californian's radio op was not
on duty.

On the receive side, it would become obvious pretty quickly. Machines have
a hard time copying CW, and find it nearly impossible in QRM. It might not
be obvious that the guy's a bootlegger, but it would be obvious that he
wasn't copying code by ear.

(awhile back, a Chilean military officer/ham was stationed on a Chilean
island that counts as a rare country separate from Chile. The operator knew
little or no Morse - he did all of his operating on RTTY. Apparently after
being asked for CW QSOs enough times, he decided to fire up his multimode
TNC on CW. The effort was very much appreciated, but it was very obvious
something different was going on...)

Tech Pluses started to be renewed as Tech 15 April 00 and about 5k of them
were in the Tech figures by December before renewal of the Codeless began.
FYI 11,875 Pluses expire in 2001 and 16872 Techs.

>
> It is known that less half of eligible amateurs renewed their
> license at the end of the ten year term.

And where does that bit of wonderment come from? Even expiring Novices
are renewing at about 30%. At first quarter rates, we will renew about
33k of the 54k that come up this year. Give or take two-thirds is a far
cry from 'less than half'.

Think about it! Given an Amateur career in the 40 year range, something
like 20-25% will fail to renew on any given 10-year cycle because they are
dead. In fact, given the aging of the population in general, death would
appear to be nearly the sole cause of non-renewal these days.

>

The ARRL has made a mockery of its constitution and by-laws, and they've trashed the good principles on which Hiram Percy Maxim founded the organization. Enough is Enough, it's time to sue.

Anyone know if we can sue them? Can you sue an organization that has not followed its by-laws and constitution in recent years? How much is the League worth right now?

Thanks for any info or advice. I'm not an attorney.

No, the code test will be dropped because it serves no regulator purpose, is unecessary, not in the public interest, and not in conformity with 5 USC 706(a)(A).

You the one that thinks it has something to due with numbers, not me.

Because get the numbers from the W5YI Report. I will go to site you
provided
and update my table. I am not exactly sure they are counting the same
way (licenses in the 2 year grace period).

<sniped>

The database I have shows that the Tech Plus license was not issued until
1991.
It unimportant becaue in terms of meanful access to HF there is little
difference
between Tech Plus, Novice, and Tech licensees.

<lklose@net-link.net> writes:

>The effect of Tech Plus class being renewed as Tech will not
>be seen until 2001.

That's not correct, Larry. The FCC began to renew Tech Pluses as Techs on April 15, 2000. More than 3500 Tech Pluses were renewed as Techs from April 2000 to November 2000. (November 14, 2000 was when the very first post-Feb 14-1991 Techs came up for renewal).

>You will see the VHF/UHF class gain
>jump up to 20,000 by April 2001. It is estimated the Tech Plus
>renewal account for about 5,000 of the gain.

Agreed. Probably more like a gain of 6000, though. And anyone who passes Element 1 but does not upgrade to General gets Novice HF privileges but still shows up in the database as a Tech.
>
>It is know that less half of eligible amateurs renewed their
>license at the end of the ten year term.

How do you figure that? Compare the following figures from the AH0A site:

Total renewed licenses (not including grace renewals) from Mar 31, 2000 to Mar 31, 2001: 23,407

Total expired licenses from Mar 31, 2000 to Mar 31, 2001: 18,537

So out of a total of 41,944 licenses eligible for renewal during that time period, at least 23,407 renewed - that's 55%.

And that 55% is an absolute worst-case number, because it does not include any grace period renewals or new vanity calls. The real renewal rate is much, much higher than 55%.
>
>I leave you to draw your conclusions on the meaning of these trend.

I think it means the restructuring mostly affected existing hams, who upgraded in large numbers. Slightly more newcomers were added than before. Still too early to gauge the long term effects.
>
Here's the really good news: The renewal rate for Techs, which was an unknown for a decade because none of them had expired yet, appears to be very high. The AH0A data shows that in March, 2001 (the first month in which such epirations would show up) 208 Tech licenses expired - and 1,427 renewed. 1,427 renewals out of 1,635 total possible is better than 87% - and again, that 87% is a

worst-case number that doesn't include grace period renewals or vanity calls. Sure, that's only one month's worth of data - so we'll keep an eye on it. My highly educated guess is that it's not a fluke, though.

As Rich McCollum has pointed out, about the only reason for nonrenewal these days seems to be death.

>worth right now?

First you need to show that the constituion and bylaws were actually violated.
Then you have to show that such violation resulted in some sort of harm to
someone.

Details, please.

I want to stand up for the ARRL. I think they have followed their organization documents. The members have voted for and elected directors who have made tough decisions based upon the facts they know. Did you vote? Did you speak out?

Amateur radio is changing and the ARRL must be responsive to that change - whatever it takes. They are they best organization to represent amateur radio and in my opinion have done a great job. The directors are pretty much volunteers who spend a lot of hours doing their job.

I would like to thank the directors and the staff at ARRL.

IMO, it's a no brainer to assume that there are magnitudes more voice
mode bootleggers than CW bootleggers - although I did bootleg CW in
between passing the Novice exam and receiving my license in the mail.
I came pretty close to guessing my new call.

Over the last 40 years I have heard this same sort of thing. ARRL this, ARRL that. I have YET to hear any serious suggestions to improve it (the ARRL). Just a lot of bitching.

Some time back, in the sixties, Wayne Green started up the 'Institute of Amateur Radio'. What a flop and what a goof.

So, anyone got some suggestions? some solutions? And BTW what exactly is the problem?

>>Since April 15, 2000, the FCC has renewed all Technician and Technician Plus
>>licenses as Technician.
>
>For Technician-Plus license class the renewals can only be
>between 10 and 8 1/3 percent of all Technician-Plus
>licensees.

How do you figure that? The license expiration dates of Tech Plus and Tech licenses are not evenly distributed over the past ten years. One reason is that they were not issued at a constant rate. Another reason is that changes in vanity call rules caused a surge of Tech and Tech Plus vanity calls to be issued about 1994. Since the issuance of a new vanity call includes a renewal, the distribution of expiration dates is not uniform.

>The assumption seems to be that TechPlus
>renewals all abrogate their ability to "upgrade" but that
>doesn't seem to be the case.

Who is assuming that? Not me.

On the AH0A site, "renewals" are the number of licenses renewed in the 90 day window before they expire. Upgrades do not result in a new license. Upgrades do not result in a renewal unless the upgrade happens in the 90 day window before

expiration of the existing license.
>
>For the Technician class licensee, the number of renewals
>will be small compared to all other classes because their
>initial numbers were small.

Not true.

The AH0A site shows that from April 2000 until December 2000 the number of Technician renewals averaged under about 500 per month. Practically all of these were Tech Plus renewals because none of the post-Feb-14-1991 Technicians were up for renewal until mid November, 2000.

In January of 2001 the number of Tech renewals was 812. In February 2001 it was 1,718 and in March 2001 1,472. The sudden rise is obviously due to the renewal of the first post-Feb-14-1991 Techncian licenses.

> The Technician class has been
>renewing regularly since their first license term expired.

That only began at the end of November, 2000.
>
>>Also, a ham who holds a Technician license and has

>simply subtract the new Technician license number from
>the Technician class total to see the number of
>Technician-Plus renewals transferred to Technician class.

It's not that simple.

If one uses the AH0A data, the Technician class license total is increased by three things: new licenses, renewals from the Tech Plus class, and grace period renewals. The Technician class license total is decreased by three different things: expirations, cancellations, and upgrades to General and Extra.

>The surest possible way to ascertain of who went where to

>15,970 were new licensees exclusive of any TechPlus
>renewal reclassification. That leaves the Technician class
>total change "off" by only 59 "others," presumably from the
>TechPlus renewal reclassification.

Nope. Your method of calculation is incorrect. You are assuming that no Techs
upgraded to General or Extra during that entire 10 month period. That's simply
not valid.

> Those 15,970 new
>Technicians still don't have any HF access with/without
>CSCEs.

Wrong again, Len. A Tech who has passed Element 1 but not upgraded to General
or Extra gets Novice HF privileges.

>There is no valid way to explain the Extra-through-Novice
>class total decrease of 10,943 by any "Tech-Plus renewals
>to Tech."

One third to one half of that decline was caused by reclassification of renewing Tech Pluses as Techs. Add up the number of Tech Plus renewals, Tech Plus renewals in the grace period and Tech Plus vanity calls issued to get an idea of how big that number is.

> Attrition is happening among the code-tested
>classes.
>
Nobody denies that. What's your point? Do you want hams to die?

>>... It will be interesting to see how the trends evolve over
>>longer time frames.
>
>Why? The trend is still clear. The number of no-code-test
>Technician licensees had been steadily increasing before
>April 15, 2000, and one cannot deny that they are still
>increasing exclusive of any Tech-Plus renewal
>reclassification to Technician.

Nobody is denying that. But a significant cause of the apparent growth of the Tech and apparent decline of the Tech Plus is renewal reclassification.

> Technician class licensees
>ARE, in the majority, renewing in that class.

Probably true. In fact, most hams renew in their current class of license. Since upgrades are not tabulated in the AH0A data, there's no easy way to tell.

>
>The TREND has been present for a long time.

Which trend? The fact that the Tech class is growing? That's no surprise.

Tell us something new for a change, Len.

Jason,

With the present 5WPM requirement for all licenses except the Tech, it
probably makes no sense to continue the Novice.

That being said, I am sad to see it go because I can remember how hard I
worked to learn the code in order to pass it, and how excited I was when
it finally came in the mail and I could get on the air. I was 13 at the
time and though it was a big accomplishment then. I know I am probably
in the minority in thinking that the Novice was the best way in to ham
radio and thought that the FCC (in retrospect) was truely inspired when
they instituted the Novice license in the early 50s. Some of my best ham
radio memories stem from the year I was Novice.

I always thought that the FCC made a mistake when they took away the 2 meter voice allocation, and made a larger mistake later when they made the license renewable. The Novice license was really a learners permit that allowed you to slowly learn most of what you needed to become a capable operator. At one time it was either up or out. It was important to get your code speed up in order to get the General.

But times change. The Technician license is arguably easier to get, conveys more spectrum allocations, and well meets the needs of a large amount of people presently in ham radio. I wish that the FCC had "grandfathered" all Novice and Tech+ licensees to General, but it did not happen.

The restructuring of Amateur Radio may or may not make a difference in the service. The jury will be out for a while on this. My opinion is that there are really no more than two licenses needed now. A no code VHF /UHF license and a full spectrum allocation license.

Uh NO, again Cecil, just all in the evolution of workable procedures
and the education of the dunces in charge of such things at the time.
Then as now such decisions were made for reasons of economics, and only
after dreadful result, such as Titanic's sinking with such awful loss of
life, does the public demand for the improvements that should have
already been in place happen.

Are you advocating
> that all ships go back to CW for emergency communications, Dick? If not,
> exactly what are you advocating for ships?

Who said I advocate anything for ships? My remarks were by way of a
realistic explanation for the reasons CW was abandoned in maritime use.
But it is important that people know about the shortcomings and
potential failures of new systems.
They are far from foolproof. And no alternate means of emergency
communications are kept on board most ships.

Why do you assume that the "experts" opoinions had anything to do with
it?
As always, all such actions are driven primarily by ecomomics, not
expertise. If yo doubt that read Richard Feynman's "minority report to
the committe investigating the Space Shuttle Challenger disaster".

And why would I advocate "opreators standing by"? I would advocate CW
as a backup, but even that would require people to learn how to use it,
and your favorite organization, NCI would probably pitch a bitch again.

>conspiracy theory, suddenly the guy switches to SSB! Your whole rant is
>not believable.

I said "the latest QSL card" -- they continue to arrive. I'll be
glad to FAX you a copy of this card, or you can write directly to
KP4XA yourself to confirm that he sent me his card.

I'll quote him: "KH6O, Hi Jeffrey. Tnx for the 10-10#. It's the
second time to copy HI. Pse QSL. 73 -- KP4XA -- Edwin."

His QSO with "KH6O" was on SSB on 28.345 MHz.

You're just upset because your "explanation" (KH6MT sending my
callsign) is so silly.

>>You're opening yourself up to a defamation of character lawsuit
>>by KH6MT

>So sue me.

I have no reason to sue -- but once KH6MT learns that you falsely
accused him of bootlegging my call on SSB, he might be interested
in at least having you make a public apology.

There are a few reasons that I wish the Novice license was still
an entry-point option for new hams.

#1) The test was aimed at a middle-school level of education, kids in
the 4-7th grades roughly. The Technician license test is longer and
covers a higher level of technical content.

#2) Many people out here in "flyover country" cannot benefit from
a uhf/vhf-only license because they might be the only ham in their
town or county.

#3) Some people are interested in radio primarily for "long distance"
as opposed to "local" communications and experimentation. Such kinds of
interests are difficult to pursue above 30MHz, and are more suited to the
HF orientation of the Novice class priveleges.

When would it be necessary ... That has been my questions all along ... all you cw'ers keep babbling about is weather reports and such traffic ... that is not vital! If you are in a hurricane ... guess what ... you can count on lots of rain and winds ... whether its 80f or 88f is totally irrelevant ... (notice i used the "imperical" system for you old farts who haven't caught on to the metric system either ... another outdated piece of horse pucky that has seen its day come and go)

As far as the red cross is concerned ... canadian and international both use commercial vhf in north america and abroad ...

Of course I never made such an accusation (but you already knew
that). I simply proposed that someone may have incorrectly
copied the morse "KH6MT" as "KH6O". I have never even suggested
that "KH6MT" was on SSB -- that twisted and tortured "explanation"
originated from you.

Good luck on this one now.

Bullshit to the core. The only way a 19 year old kid could ship out as
a sparky was if he had a recommedation from a relative already in the
closed union and the starting rate was something like $10k in 1956. I
had the opportunity but I opted for engineering school instead. What
did you make in 1956 Lenny with yer First Phone, hmmm?

2134. Re: Can we sue the ARRL?

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-06 20:28:15 UTC
From: Lou <tech@dp.net>
Message-ID: <9al91i$qo1$1@news.dp.net>
Source record: 6394
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.swap

Can they (ARRL) be sued? I'm not a lawyer. But an Attorney friend once told me in general conversation - ANYONE can be sued... "Winning" the case is another matter. Does the party launching the suit have legitimate grounds to even attract an Attorneys interest? Yes they get paid to do it, but I doubt any (intelligent) lawyer would insult his/her intelligence and reputation with a frivolous lawsuit. The case has to have merits. Otherwise, you are merely wasting your time and money. Can you prove the ARRL hasn't "tried" to do as they have said?

I'm not a member of the ARRL. I was back when I first was licensed (80s). I don't agree with all their policies either. Sue them? No..... Nothing worth suing for. It is just a dis -agreement of policies. I'm not saying they are totally wrong either. But I will say this, if it weren't for the ARRL, I think Big Business would have sucked up a good portion of, if not all of the Ham Bands - moons ago.

There was a comment made of whether the staff or board was doing volunteer work. To some extent, that is true, not sure to what extent. So to the extent that they are doing it free of their own time, energies and maybe dollars, you have to applaud them for that.

I too am a volunteer in other services. Being a volunteer is often a thankless job, but if someone didn't step up to the plate to do it, who would? Certainly not the critics. It is easy to whine and moan and groan. If you can't appreciate the efforts, step up and offer to help or stay out of the way altogether instead of making things worse. As the saying goes... "Lead-follow-or get out of the way".

The FCC is a governmental agency.... Overseen by the powers that be. Arm twisting can be done. It happened with the Code with the introduction of the Waiver/simplified testing. If I'm not wrong, King Hussein of Jordan (now deceased/Amateur Radio Operator) had a friend in the US that couldn't muster the grade for whatever reason, so he asked the President to help out. And, whalah! Code waivers......changes in the CW testing for those who couldn't copy it like thousands before them. My point is, they can also be"convinced" to cut the bands to sell off. Let's face it folks, the majority of the equipment manufacturers who make our beloved ham radios are also 2 way radio manufacturers. So, they won't lose out. They can merely stop production. They could do like Uniden did to the Bearcat parts inventory when they bought them out. DESTROYED ALL. No repairs to be made. Will it happen? I don't know, but it is feasible.

So, maybe we don't agree with the ARRL completely. Let them go down the tubes and see where we stand 15 years from now. If I"m not wrong again, they fought for scanner, tower and other rights, when the states started cracking

down. How many of you whiners are ready to take on the fight - ALONE? I certainly can't afford a lawsuit for such a cause.
My cash is tied in to buying food and clothes and keeping a roof over my head. As much as I enjoy radio, it is still a HOBBY. My family needs come first and foremost. I may not support the ARRL presently in dues, but I DO applaud the things they've done right. Someday soon, I will rejoin to help ward off the wolves.

Technology is changing dramatically. WE (Ham Operators) and yes, maybe some CBers as well, are a part of that process through developing modes of transmission such as packet and so on. IF no one is there to stand up for the rights of radio operators Ham and CB alike, it is highly possible, we all will be taken off the air in the near future.

Enjoy your Ham/CB hobby today, for tomorrow, it could be GONE!

Just an opinion...my 2 cents.

Actually, this was a good suggestion for the possibility (until it was disclosed that the names and the 10-10 number didn't match). An "M" followed by a "T" does constitute two dashes followed by one, which if one is lax on the interletter spacing, could be mistaken for three dashes in a row, thus "O".

So why was this "jumped on" so quickly?

> Techs came up for renewal).

There's also the factor that until 1994, when the FCC started to print
"Technician Plus" licenses, any renewal occuring between 1991 and 1994 of an
existing "Technician" license was done as "Technician," not "Technician Plus"
as it should have been since all those renewals were for those who had passed
[at least] 5 wpm. Although many caught on and asked for correction, many did
not.

Hans, you made some excellent points. I have fond memories of my novice ticket (WN2CJV) which I received in 1962. I had a ball with it and struggled with morse and didn't get the general (WB2OSP) until 1964. A friend, WB2KAO, promised me if I copied for 15 minutes a night for a week I'd get it. He was right. One week took me to around 18 - then it got easy. With incentive licensing, I took and passed my extra, commercial telegraph, and 1st phone in 1966. After a stint in the Navy and two new calls (WA3RJX and N2JH), I let the tickets expire around 1980 - 81. I jumped back in in 1993 as AA2QA. I think some of the most fun I had was with that novice ticket ...

Phone, that's why.

According to the QSL card, that QSO occurred on SSB; the phony
"KH6O" gave his QTH as Hawaii and his name as "Jeff." All on
phone.

In response to the question, I suppose I can answer since I am a lawyer.

You can sue almost anyone. Certain entities like the government and foreign countries may need to give you their permission. If you can show the lawyer that there is a lot of money to be made, he or she might take it on a contingent fee. Otherwise, you must pony up the cash up front to finance it. A small case like this would probably require $20,000 cash just to begin.

The next step is to show that you have special standing or are an injured party. If you are not a member of ARRL, your case would be thrown out unless it was something like an assault or some other personal injury.

Assuming you have standing, then you must show that ARRL did something that adversely affected you.

If you get that far, then you have to convince the court what they should do to remedy the problem. That would normally be an injunction or monetary damages.;

Griping will not cost a thing. But, it generally is not productive.

And any lawyer filing a frivilous lawsuit risks what are known
as Rule 11 sanctions - big cash penalties for filing a suit
which s/he knows - or should have known - has no merit.

The League president, vice presidents, and directors are
volunteers, with the exception of the Executive Vice President
(currently Dave Sumner) who is a paid employee. The directors
are elected by the membership, and the officers are elected or
appointed by the board of directors.

>of a giggle.

In 1956 there didn't appear to be any future in radiotelegraphy, either for me or for long-haul HF commercial communications or in any other radio service except maritime mobile, land-based LORAN, or a few scattered land stations still using the first mode in radio communications.

The only "GIGGLE" going on is some old fart sitting around chomping at the bit, wanting to fight, and weakly doing so by personal pejorative posting.

>>I was 23 1/2 when I got my commercial First Phone in 1956, senior.
>>Why should everyone have to lust for a life at sea? :-)
>>
>We all have the option of limiting our options.

A commercial license NOT involving your beloved morse code was much more of an attractive and practical option in 1956. Forty years later a commercial radiotelegraph license is of very limited options for a future in radio.

>>Chances are a "phone-licensed kid" who rode gain at a broadcast
>>station could make more than you think they could in 1956. :-)
>>

>had the opportunity but I opted for engineering school instead. What
>did you make in 1956 Lenny with yer First Phone, hmmm?

I could care less about 19 year olds of 1956. Working at WREX-TV,
WRRR, WBEL, and WRRR in 1956 I earned enough to move west
to California. Now why that is all some kind of "dispute" only Kelly
can explain. As far as money is concerned, no problem, senior.
We might compare salaries up to retirement, personal equity value,
married status, etc., etc., etc. but that is not something about
amateur radio policy is it? Or maybe you think you have some kind
of "moral/ethical standard" for amateur radio just because you've
been licensed for a while?

>I was never serious about it, I took the test just for the hell of it
>because the eaminer challenged me to take it. Makes a nice piece of
>wallpaper alongside my Extra certificate.

If you need wallpaper so bad, might I suggest the American Blind
and Wallpaper Company? They have a nice website, selection of
wallpaper patterns and colors, and specialize in mail-order...

>>No, because all your concentration is on ships and shipping for
>>radio use, emphasizing CW.
>>
>. . . while you struggle on trying to bury cw in irrelevancies . .
>just wasn't that way was it Lenny?

It is not irrelevant that OOK CW is burying itself in the inability
to compete with all other communications modes in radio. It is
relevant that many old farts still haven't got a clue that they are
unable to compete in other radio modes, cannot stay with the
state of the art, and want to endlessly dream of and demand
adherence to old standards and practices.

>Like I never been there. I have three sub-500Khz-30Mhz radios Lenny.

Then go play with them. Don't come in here spitting and
sparking because you feel a need for respect and don't get
it. There's lots and lots of communications modes in radio,
including HF radio, that don't involve OOK CW. Try learning
about them, understanding them. Improve your self-worth.
Or sit around the campfire bragging up old stories about
when hams were Men and only did CW.

>>Then why did you ask if "as a 'with-it' communications professional,
>>did I already have a radiotelegraph license" in 1956? :-)
>>
>You haven't answered the quetion, Why didn't you get that license

>Lenny?

Kelly is a Class A dumshit with short-term memory loss. Geez.

I didn't get any commercial radiotelegraph license in 1956
because there wasn't any future in commercial radio-
telegraphy back then. Turned out I was right. There is even
less of a future for radiotelegraphy 45 years later.

I got a commercial radiotelephone license in 1956 so that 45
years later some old fossils could get their giggles poking fun
at that accomplishment because they were (later) so damned
"superior" in CW skills, self-important, and need some
"civilian" to hit on when they are frustrated. Was that the
answer you want and need? Does anyone care? :-)

You are forgetting the FCC's temporary backlog and slow response
to upgrading and new licensees in the month following April 15, 2000.
[that news was in all the ham periodicals and newsletters]

A truer picture of post-restructuring changes is to use FCC database
information beginning in June, 2000. Post-restructuring effect was
the main point of Hans Brakob's posting.

>How do you figure that? The license expiration dates of Tech Plus and Tech
>licenses are not evenly distributed over the past ten years. One reason is
>that they were not issued at a constant rate. Another reason is that changes
in
>vanity call rules caused a surge of Tech and Tech Plus vanity calls to be
>issued about 1994. Since the issuance of a new vanity call includes a
>renewal, the distribution of expiration dates is not uniform.

A truer picture of post-restructuring changes is to use FCC database
information beginning in June, 2000. Post-restructuring effect was
the main point of Hans Brakob's posting.

>On the AH0A site, "renewals" are the number of licenses renewed in the 90 day
>window before they expire. Upgrades do not result in a new license. Upgrades
>do not result in a renewal unless the upgrade happens in the 90 day window
>before expiration of the existing license.

Quit trying to be confusing and read Joe Speroni's own explanations.
"New" licenses are truly new licenses, the individuals receiving them
not being in the amateur radio database with any other amateur
license or so indicated on the FCC's new database format.
"Upgrades" are those already-licensed in previous database

records or so indicated on the FCC's new database format. Since
the FCC databases are updated daily, weekly, and monthly, the
AH0A site tabulations may sometimes be in a "funny" date (such
as 25 March 2001 as was recently posted there) or at some common
date such as the of the last day of the month. The AH0A tabulations
are not at 90-day increments.

>>For the Technician class licensee, the number of renewals
>>will be small compared to all other classes because their
>>initial numbers were small.
>
>Not true.

Sigh...In the beginning of the new Technician class (as that
class is known as today, not the old Technician class which
became "Technician-Plus"), their numbers started as ZERO
and increased from there. Arithmetic progression.

>The AH0A site shows that from April 2000 until December 2000 the number of
>Technician renewals averaged under about 500 per month. Practically all of
>these were Tech Plus renewals because none of the post-Feb-14-1991
>Technicians were up for renewal until mid November, 2000.

A truer picture of post-restructuring changes is to use FCC database
information beginning in June, 2000. Post-restructuring effect was
the main point of Hans Brakob's posting.

>In January of 2001 the number of Tech renewals was 812. In February 2001 it
>was 1,718 and in March 2001 1,472. The sudden rise is obviously due to the
>renewal of the first post-Feb-14-1991 Techncian licenses.

"Obvious?!?" :-)

The AH0A site has tabulations for Total, New, Renewed (within 10-year
period), Renewed In Grace Period, Expirations. The Speroni site
no longer tabulates "upgrades" from or to another class.

>That only began at the end of November, 2000.

A truer picture of post-restructuring changes is to use FCC database
information beginning in June, 2000. Post-restructuring effect was
the main point of Hans Brakob's posting.

>If one uses the AH0A data, the Technician class license total is increased by
>three things: new licenses, renewals from the Tech Plus class, and grace
>period renewals.

Between the end of June 2000 and end of March 2001 the number
of NEW Technician class licenses exclusive of any renewals was
15,970. Between the end of June 2000 and end of March 2001 the
total number of Technician class licenses increased by 16,029.
The difference is 59...which have to be (by N2EY statement)
from renewals.

>The Technician class license total is decreased by three different
>things: expirations, cancellations, and upgrades to General and Extra.

The AH0A site doesn't tabulate "upgrades."

>>The total number of Extra-Advanced-General-TechPlus-Novice
>>licensees DECLINED by 13,646 while the Technician licenses
>>INCREASED by 20,221.
>
>Nobody is debating that. What's your point?

License classes Extra, Advanced, General, Technician-Plus,
and Novice all have HF privileges. Technician does not. All
classes have VHF-and-higher-frequency privileges. Hans
used the grouping of some-HF/no-HF versus all-HF in order to
show "more hams on HF after restructuring." If you don't see
the difference, why did you type all those words "objecting?"

Hans Brakob used a 10-month period after restructuring. I
used the period after restructuring. Jim Miccolis used a 12-
month period beginning BEFORE restructuring.

>So? Why should those delays cause that period to be ignored?

Hello?!? The public doesn't know new or changed-modified-etc
licenses until the FCC has processed all the applications and
made it official. [the FCC is the only amateur radio regulatory
agency in the USA] If the FCC is "late" or "backlogged" to
delay applications, the public doesn't get to find out about it.
If the public doesn't know it, it can't be tabulated and those
who pick flysh*t out of pepper pots won't know it but those
will also try to load up from the adjacent salt pot and change
their numbers. :-)

>Why do you want to ignore the period immediately after the April 15 changes?

What did I just finish explaining?!? Geez.

>Nope. Your method of calculation is incorrect.

Geez...you want to begin number-chasing BEFORE restructuring
in order to comment on POST-restructuring effects? Tsk, tsk,
very BAD! Not at all correct.

>You are assuming that no Techs
>upgraded to General or Extra during that entire 10 month period. That's
>simply not valid.

In the period between the end of June 2000 and end of March 2001
there was a difference of 59 between the NEW licenses (exclusive
of renewals or other changes) and the change of Technician class
license totals over the same period. I never discounted anything.

You are attempting discrediting by a false statement of omission.
Bad form, OM, bad form.

>> Attrition is happening among the code-tested classes.
>>
>Nobody denies that. What's your point? Do you want hams to die?

I've never said anything about "dying." Quit lying.

My Webster's says "attrition" is defined two ways: "A wearing
away by or as by friction" or "A normal loss of personnel as by
retirement." The code-tested classes are, as a total, reducing
in numbers...by dropping out one way or another.

>Nobody is denying that. But a significant cause of the apparent growth of the
>Tech and apparent decline of the Tech Plus is renewal reclassification.

Good grief, no-clue, go and read the definitions of Speroni's
NEW license grants totals per month for 10 months (15,970)
against the total change in Technician class licenses for the
same 10 months (16,029). If you are going to say that a 59
difference is "significant," you are speaking with total and
near-absolute denial of the obvious.

Sorry, but your counter-argument FAILS badly in explaining
anything in regards to POST-restructuring changes. Go
away, say 100 Hail Hirams in penitence, and sin no more.

The Technician and Novice license were both created in the 1951 restructuring.
The 1951 Tech had the same requirements as the General except for a 5 wpm
instead of 13 wpm code test. 1951 Techs had all privileges on 220 and higher.

Still another advantage of the mode. And not just drink beer but eat, keep the
log, smoke, adjust the rig, make obscene gestures at kibitzers, etc, etc.

: assignment at 40m? or 10m, or maybe for ALL of HF?

Highly improbable. The HF spectrum is of little use to commercial
interests. The problem is the inconsistant propogation.

I wouldn't worry about anything under 2 meters.

2157. My Extra Class License is Just About Worthless Now - Thanks FCC

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-07 02:48:56 UTC
From: Michael Adams <michaeladams2000@no-spm.hotmail.com>
Message-ID: <sevz6.9231$VF3.869444@newsread2.prod.itd.earthlink.net>
Source record: 6413

I spent one to two hours per night, plus several hours per day on the weekends, studying code and radio theory for four months to get from Technician Plus to Extra Class. Unlike many people, Morse Code did not come easily to me. In addition to all the studying, I took an eight week code class. It was taught by a visually impaired ham, who was a truly gifted instructor. I put a lot of work into getting my Extra Class license, and when I finally passed the 20 word per minute code test, and three separate tests for General, Advanced (50 questions), and Extra (another 25 questions), I was proud of my achievement.

Now the FCC has taken my Amateur Extra license and made it an almost worthless piece of paper. It now only takes one 50 question test to get from General to Extra Class, and there is no code test whatsoever.

Forget the "code" versus "no code" debate. Shouldn't it be take the same level of dedication to reach Extra Class as it was before the FCC license restructuring? Shouldn't we have a license system which pushes hams to achieve things they thought they couldn't do?

I not only feel sorry for the old "Extra" Class hams who have seen their achievement devalued. I feel sorry for the new Extra Class hams, who will never feel the sense of pride the Extra Class license use to bring.

73,

Michael Adams

True. This means that they can either promote ham radio in their areas,
or upgrade to General.

5 WPM isn't a difficult level to reach, especially when the reward for
that and another theory exam is a General license.

No, you did that, by deciding that your 20 WPM element was the reason
you got the license.

> It now only takes one 50 question test to get

That depends on your interpretation of the reasons for having ham radio
in the first place. Most of us are here to run radios. If you feel
that it is here simply to test your "dedication," then perhaps you
should consider a hobby in nuclear physics.

> Shouldn't we have a license system which pushes hams to achieve things they thought they
couldn't do?

You mean like accepting change?

> I not only feel sorry for the old "Extra" Class hams who have seen their

My gut reaction was the same as yours but when it was all over I was still
doing the same thing I did before for much the same reasons; I had lost
nothing. Even having passed the 20, I always did feel anything beyond 12
was exactly what you called it, an indication of a level of dedication (or
orneryness, or stupidity, or ego) for no particular purpose. Much like
education, it is yours and it is portable. Among your peers nothing has

been devalued.

Those who follow will have to discover it for themselves rather than being led into it. OK, so be it and amen. Time to move on.

Given the incredible grousing about a 5wpm test, perhaps it does need to be retained to show at least SOME level of dedication or orneryness, or stupidity. Ego we got lots of.

I got my Novice license in 1951 and would have been entirely happy with
it but it expired after a year. The great majority of the thrill of ham
radio for me was world-wide coverage with 40 watts on HF. For those
young and/or non-technical potential hams who get no thrill out of
talking on a local repeater and would get a thrill out of world-wide
coverage using CW (or SSB on 10m), the loss of the Novice license is a
considerable loss. If the Tech license had existed in 1951 instead of
the Novice license, I would not have been interested.

>What's all this feeling stuff? Do you have all those feelings about your
>driver's license? The value of an amateur radio license, like a driver's
>license, are the privileges granted by the license.

Cecil:

Like an amateur radio license, a driver's license is something that requires
those who have one to learn useful skills, and then demonstrate those
skills to an examiner in order to have the privileges granted to them.
Notice I said "privileges," not "rights." Therefore, drivers licenses and
ham radio licenses must be "earned" and "achieved."

Now, I have gone beyond a normal driver's license. I have a Commercial
Driver's License, CDL class B, with Passenger and Air Brake Endorsements.
To attain this, I had to study for and take a CDL General Knowledge test, a
Passenger test, and the Air Brake Test. I also had to take another road test
under the watchful eye of an examiner from the DMV. I have done more,
achieved more, and as a result, have the right and privilege of driving
larger, heavier vehicles carrying more than 16 passengers. I also have
the greatly increased responsibilities for safe vehicle operation that are
expected of a professional driver. I realize it's not the same as a ham
radio license, because the public safety and my company's economic
future depend on my taking my responsibilities as a professional
driver as seriously as they are intended to be taken. However a radio
amateur who does not take his responsibilities seriously can also cause
a lot of harm in the form of interference, so perhaps there is a direct
comparison. That being the case, what is the harm in requiring that
radio amateurs be required to demonstrate at least a fraction of the
dedication as professional drivers must when attaining their licensing
privileges?

>That depends on your interpretation of the reasons for having ham radio
>in the first place. Most of us are here to run radios. If you feel
>that it is here simply to test your "dedication," then perhaps you
>should consider a hobby in nuclear physics.

Keith:

I don't believe Michael was referring to quite that level of "dedication." The
amount of dedicate effort required to master the Morse Code at 20 WPM
is significantly less than that required to become a Nuclear Physicist.
However, this dedication does impart a useful communications skill upon
a person who has chosen a voluntary activity in which radio amateurs
prepare to provide emergency backup communications services for their
communities.

>> Shouldn't we have a license system which pushes hams to achieve things
>they thought they couldn't do?
>
>You mean like accepting change?

What if the "change" had gone the other way, Keith? What if we increased
the number of theory questions by 50%, and kept the three-level code
testing requirements with a 20 WPM top end? Would you have accepted
that "change?" After all, it would have addressed the stated desire of the
NCTA to diminish the overall importance of code testing as a licensing
requirement!

>> I not only feel sorry for the old "Extra" Class hams who have seen their
>> achievement devalued.
>
>I feel sorry for you, thinking that the important thing is the exam.

Which exam, Keith? Code or theory? Or are you advocating "exam free"
licensing?

>> I feel sorry for the new Extra Class hams, who will
>> never feel the sense of pride the Extra Class license use to bring.
>
>If you say so. I'm looking forward to passing the exam soon, I'll let
>you know if I have any sense of pride afterward.

Keith, you're entitled to any sense of pride you wish to confer upon
yourself. However, you will have to face the fact that certain of your
fellow hams will view your "achievements" through the filter of their
own experience. Whether you believe this is "fair" or not is irrelevant;
it is simple human nature.

>questions), I was proud of my achievement.

Michael:

Nobody has taken your achievement away from you. It is still there,
you have still "earned" your Pre-Dumbing Down Amateur Extra Class
License, just like all the rest of us who attained that status prior to
April 15, 2000. You have a right to be proud of that achievement, and
you can rightly state that the Post-Dumbing Down Extras are not
your "equals" as radio amateurs. There is nothing wrong with them
personally, but they have been made the victims of changing
circumstances which have had the effect of diminishing their status
as hams.

>Now the FCC has taken my Amateur Extra license and made it an almost
>worthless piece of paper.

It is nothing of the sort. It still conveys the same valuable privileges it
did prior to the Dumbing Down. The only difference is that YOU were able
to achieve this status under a significantly more challenging licensing
structure. You have proven YOUR superiority. You have nothing to
prove to your fellow hams who achieved Extra class in this past year;
THEY have something to prove to YOU.

>It now only takes one 50 question test to get
>from General to Extra Class, and there is no code test whatsoever.
>
>Forget the "code" versus "no code" debate. Shouldn't it be take the same
>level of dedication to reach Extra Class as it was before the FCC license
>restructuring? Shouldn't we have a license system which pushes hams to
>achieve things they thought they couldn't do?

It would be nice if it still did, but you need to remember that we now live in a society where we not only share equal opportunities, but must now provide equalized outcomes as well. It wasn't "fair" for some people to achieve while others remained stagnant. The stagnant ones were tired of being chided for their laziness and lack of ambition, and began whining and complaining for a change to be made on their behalf. Those who thought they would gain an economic advantage by meeting this need followed suit. You know the rest.

>I not only feel sorry for the old "Extra" Class hams who have seen their
>achievement devalued.

There is no need for you or anyone else to feel sorry for me, Michael. I have a permanent record of my achievement as an Amateur Extra Class ham, and nobody can take this achievement away from me. The value of my achievement will remain unchanged for as long as I choose to remain licensed as an Amateur Radio Operator, and this applies to you and all other pre-Restructuring hams who attained General, Advanced, or Extra-class.

never feel the sense of pride the Extra Class license use to bring.

I have mixed feelings about that. Those who asked for the dumbed-down licensing requirements got what they deserved -- a devalued license with no meaningful accomplishments behind it. They have been given a free ride into higher privileges without having "paid their dues," as it were. They are here on an Affirmative Action program, like the clients of any Welfare State. They are to be treated with common courtesy and the same basic human dignity that anyone would deserve, but they are not to be heartily congratulated for having made any sort of brilliant "achievement," unless they are developmentally disabled to a fairly severe extent. Of course, hams with even fairly severe disabilities were still able to master the Morse Code and pass the 20 WPM test for an Amateur Extra class license; so if I have just insulted anyone in this category, I hereby humbly apologize.

The license has always been nothing more than a piece of paper authorizing certain frequency privileges, no different then a driver's license authorizes certain driving privileges. It has certainly never been evidence of skill, or knowledge, beyond what is specifically covered in the exam (which is very basic compared to the overall skills and knowledge associated with the subject of radio).

As a driver, I don't really care how long you studied for the exam, or what license you have - it is how you drive now that really counts. Likewise, it is not the exam, but what you've done since, that determines your real value as a ham operator - your value to the ham radio community, your value to your neighbors and community, and your value when deciding how worthy ham radio is when it comes to it's privileges.

Now, if you've wrapped your ego up in that piece of paper, then you've wrapped yourself with nothing more than false pride. And I'm not sorry at all that you're now having to face reality. Perhaps these changes will finally force ham operators to realize that we're a community of equals (all in this together, for better or worse), not a community based on a class system.

Dear Dick and Larry,

I've got to hand it to you two Nobel laureates. You guys must also have psychic abilities and knew I was downloading an amateur radio newsgroup for the first time. Who do you think you are to attack this man and insult him for no reason. You know nothing about him and his life and yet you respond back to him with insults. What you two did flies right in the face of everything that Ham radio stands for. First and foremost with all Hams is the ideal of the dissemintation of information. It is how we inform and teach ourselves and others about our hobby which in turns causes us to gain new members that strengthens our hobby and enrichens not only our lives but others as well. It is the same for all hobbies whether it is model rocketry, radio control cars and planes, Civil War re-enactments or any other hobby you can think of. Did either of you two ever think that maybe some people are happy just working the VHF/UHF bands? Maybe RG had a period in his life where he had to put his his hobby on the backburner and is just now getting back to it. I was going to reframe from attacking you two but since I took your comments personally you two are now fair game. Everyday I'm out there trying to convince kids and adults alike to realize that there are other things in life to do other than drugs, the television, and celebrity idealization. And in case your pea-size brains didn't think of it, children do have access to computers and may watching what you post. I know guys like you...I can time my watch to the way you act...No doubt you two probably have at least $50,000.00 apiece worth of ham radio equipment with huge towers and yet your front yards look like they could have been used as sets for the movie "DELIVERANCE". By way, your tickets are a privilege and not a right and thus can be revoked at any time!!! Oh yeah, one more thing -- my license is expiring this summer. I'm a no-code tech and would like to know how to renew my license////////

Obviously Lennie the Arrogant has been in an introspective mood again.
This is about as "dead on the money" as you can get, Lennie, even if you won't admit it was yourself you were ranting about.

You should read some of your OWN writings. I bet if we sat you down, snipped paragraphs from all of our various posts INCLUDING YOUR OWN, you couldn't tell the difference.

>Forty years later a commercial radiotelegraph license is of
>very limited options for a future in radio.

And forty years from NOW almost any radio license or RF engineering degree will be useless...shall we just stop operating radios and stop sending kids to school because of what it WON'T be worth in 40 years?

>I could care less about 19 year olds of 1956.

And judging from your hate-spewn rants in here, I'd say it's safe to say you don't care about 19 yar olds from 1966, 76, 86, 96, 06, et al. If you didn't do it first or better, no one could do it.

>We might compare salaries up to retirement, personal equity value,
>married status, etc., etc., etc. but that is not something about
>amateur radio policy is it?

You never let it stop YOU before, Putzmeister. You have delved into SEVERAL rants on property you own, the value of your retirement, income from part time consulting, etc etc.

>Or maybe you think you have some kind
>of "moral/ethical standard" for amateur radio just because you've
>been licensed for a while?

Perhaps it's the same "moral/ethical standard" YOU apply by virtue of your alleged engineering experience or COMMERCIAL radio experience...?!?!?

>If you need wallpaper so bad, might I suggest the American Blind
>and Wallpaper Company? They have a nice website, selection of
>wallpaper patterns and colors, and specialize in mail-order...

We can roll it up and put it in the bathroom...right along where I have rolled up your "been there/done that" rants for some future use.

>It is relevant that many old farts still haven't got a clue that they are
>unable to compete in other radio modes, cannot stay with the
>state of the art, and want to endlessly dream of and demand
>adherence to old standards and practices.

And which of those "excuses" is why YOU, "Mr. Technology", continue to lie, harass and intimidate in a newsgroup for a radio service in which you have no vested interest...???

>Don't come in here spitting and
>sparking because you feel a need for respect and don't get
>it.

This is priceless, coming from a twerp who constantly whines about how Hams allegedly don't kneel sufficently before the "Great RF Technician".

>Kelly is a Class A dumshit with short-term memory loss. Geez.

He asked you a question. You responded with one of those profane "personal perjoratives" you are so fond of accusing others of levelling against you.

Pot/kettle/black. As usual.

>I didn't get any commercial radiotelegraph license in 1956
>because there wasn't any future in commercial radio-
>telegraphy back then. Turned out I was right. There is even
>less of a future for radiotelegraphy 45 years later.

Commercial Morse Code continued in use for another 40 years in the United States and continues in other countries. Seems you are wrong...again.

Guess I can stop learning new nursing techniques since they will all be obsolete in 40 years.

>Was that the answer you want and need? Does anyone care?

Obviously YOU do, otherwise you'd move on and stop being such a putz. But it has been clinically proven that retiree's without a point of focus generally succumb at earlier ages. Is that it..??? This IS your life? Couldn't make it on a park bench or playing shuffle board (requires being out in the light of day) so you sequester yourself in a dark room with your keyboard and bad attitude, determined to inflict you hatred and angst on others?

I think they call those people "sadists". You are a sadist, but just one that can't stand the sight of blood, so you suffice it to be annoying in this forum.

What ever spins your propeller, Lennie.

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

How high is the dipole, Cecil?

Most real-world 40 meter 1/4 wave verticals won't beat a dipole a quarter
wavelength high. Too many obstacles and too much ground loss, unless you have a
wide open site and put down a lot of radials.

The answer is....oh no, you don't want that answer. It's old technology, dating
back to the spark days.

>Quit trying to be confusing and read Joe Speroni's own explanations.

I have. And I understand them. That's what the above is based on.

>"New" licenses are truly new licenses, the individuals receiving them
>not being in the amateur radio database with any other amateur
>license or so indicated on the FCC's new database format.

That's true. That's what I wrote. Upgrarades do not result in a new license.

>"Upgrades" are those already-licensed in previous database
>records or so indicated on the FCC's new database format.

"Upgrades" are not recorded separately in the AH0A data. They are lumped in
with modifications.

> Since
>the FCC databases are updated daily, weekly, and monthly, the
>AH0A site tabulations may sometimes be in a "funny" date (such
>as 25 March 2001 as was recently posted there) or at some common
>date such as the of the last day of the month. The AH0A tabulations

>became "Technician-Plus"), their numbers started as ZERO
>and increased from there. Arithmetic progression.

Not true. Again.

In 1991, all the FCC did was remove the code test from the Techician class
license. All of the then-licensed Techs who had passed 5 wpm still had Tech
licenses and the database did not record the difference.

It was not until 1994 that the "Tech Plus" license came to exist as a separate
license class.
>
>>The AH0A site shows that from April 2000 until December 2000 the number of

>the main point of Hans Brakob's posting.

Saying it over and over doesn't make a falsehood any more true, Len.
>
>>If one uses the AH0A data, the Technician class license total is increased
>by
>>three things: new licenses, renewals from the Tech Plus class, and grace
>>period renewals.
>
>Between the end of June 2000 and end of March 2001 the number
>of NEW Technician class licenses exclusive of any renewals was
>15,970. Between the end of June 2000 and end of March 2001 the
>total number of Technician class licenses increased by 16,029.
>The difference is 59...which have to be (by N2EY statement)
>from renewals.

No, that's NOT what I wrote. And it's NOT correct. You are ignoring the effect
of upgrades. Why?
>
>>The Technician class license total is decreased by three different

>>things: expirations, cancellations, and upgrades to General and Extra.
>
>The AH0A site doesn't tabulate "upgrades."

But it DOES reduce the totals of the previous license class when an upgrade occurs. Once a license is upgraded, it is no longer shown in the old license class. All Techicians who upgraded to General or Extra in the June 2000 - March 2001 time frame are REMOVED from the Technician license total.
>
>>>The total number of Extra-Advanced-General-TechPlus-Novice
>>>licensees DECLINED by 13,646 while the Technician licenses
>>>INCREASED by 20,221.
>>
>>Nobody is debating that. What's your point?
>
>License classes Extra, Advanced, General, Technician-Plus,
>and Novice all have HF privileges.

True - but that wasn't K0HB's point. Tech Plus and Novice have minimal HF. The others have lots of HF. BIG difference.

> Technician does not.

NOT TRUE in all cases. Renewed Technicians who were Tech Pluses have HF privileges. Technicians who have passed Element 1 have HF privileges. This is basic Part 97 stuff. You obviously don't understand Part 97, Len.

> All
>classes have VHF-and-higher-frequency privileges. Hans
>used the grouping of some-HF/no-HF versus all-HF in order to
>show "more hams on HF after restructuring." If you don't see
>the difference, why did you type all those words "objecting?"
>
>Hans Brakob used a 10-month period after restructuring. I
>used the period after restructuring.

And ignored the period immediately after restructuring.

> Jim Miccolis used a 12-
>month period beginning BEFORE restructuring.

Two weeks before resturcturing, so as to include all of the post restructuring period.
>
>>So? Why should those delays cause that period to be ignored?
>
>Hello?!? The public doesn't know new or changed-modified-etc
>licenses until the FCC has processed all the applications and
>made it official. [the FCC is the only amateur radio regulatory

>If the public doesn't know it, it can't be tabulated and those
>who pick flysh*t out of pepper pots won't know it but those

>will also try to load up from the adjacent salt pot and change
>their numbers. :-)

Nonsense. The delays did not affect ALL of the applications.
>
>>Why do you want to ignore the period immediately after the April 15 changes?

>What did I just finish explaining?!? Geez.

Your explanation is faulty. There were thousands of post-April-15-2000
applications processed by the FCC in late April and in May of 2000.
>
>>You are assuming that no Techs
>>upgraded to General or Extra during that entire 10 month period. That's
>>simply not valid.
>
>In the period between the end of June 2000 and end of March 2001
>there was a difference of 59 between the NEW licenses (exclusive
>of renewals or other changes) and the change of Technician class
>license totals over the same period. I never discounted anything.

You did NOT include the fact that all Technicians who upgraded in that
timeframe are removed from the Technician license class totals.
>
>You are attempting discrediting by a false statement of omission.

No. I am pointing out your errors, Len.

>Bad form, OM, bad form.

The only "bad form" is your denial of the obvious.

Simple question:

When a licensee upgrades his/her license from Technician to General or Extra,
is the Technician license total reduced or not?

>>> Attrition is happening among the code-tested classes.
>>>
>>Nobody denies that. What's your point? Do you want hams to die?
>
>I've never said anything about "dying."

No, yiu haven't. But from the renewal rates, it's clear that the death of hams
is the main cause of attrition.

>Quit lying.
>
Did I write that you wished for hams to die? No. I asked a question. If the
answer is "no", all you have to do is say so.

>My Webster's says "attrition" is defined two ways: "A wearing
>away by or as by friction" or "A normal loss of personnel as by
>retirement."

You're not Cecil. Don't try to play his game. He's good at it. You're not.

>The code-tested classes are, as a total, reducing
>in numbers...by dropping out one way or another.

And the most common reason is....?
>
>>Nobody is denying that. But a significant cause of the apparent growth of
>the
>>Tech and apparent decline of the Tech Plus is renewal reclassification.
>
>Good grief, no-clue, go and read the definitions of Speroni's
>NEW license grants totals per month for 10 months (15,970)
>against the total change in Technician class licenses for the
>same 10 months (16,029). If you are going to say that a 59
>difference is "significant," you are speaking with total and
>near-absolute denial of the obvious.

No, I'm not. YOU are.

Your faulty math assumes that NO Technician licenses expired, were cancelled,
or upgraded in the 10 month timeframe mentioned. That's simply not correct. Why
do you deny the obvious, Len?
>
>Sorry, but your counter-argument FAILS badly in explaining
>anything in regards to POST-restructuring changes. Go
>away, say 100 Hail Hirams in penitence, and sin no more.

In other words, I've pointed out that Emperor Anderson has no logical clothes.
>
Try reading and understanding Part 97 and the explanations on the Speroni site.
Your denial of the obvious is boring, Len/

It continues to amaze me that hams want to hang on to the past! Look at QST
or any ham radio magazine and look at the great number of "silent keys" each
month. The fact is , like it or not, amateur radio is dying and if the
something is not changed, you will not have anyone out there to talk to!
It's obvious that you are retired and not in the business world or you would
know that "change" is rapid and constant. Why? Survival? The same holds
true with Amateur Radio. Enjoy your Extra Class licenses and the hobby and
quit living in the past.

Larry

Sure it does. And your attitude,"Technology will solve all ills" is the very cause of the Titanic disaster. Everyone believed the techies who swore that the all new hitech Titanic just COULDN'T sink, and that enough lifeboats to carry all aboard were just misuse of deck space. Sort of like you and your claim that CW will never be needed again in ham radio since there are better modes around...

"Michael Adams" <michaeladams2000@no-spm.hotmail.com>
shared these priceless pearls of wisdom:

->Forget the "code" versus "no code" debate. Shouldn't it be take the same
->level of dedication to reach Extra Class as it was before the FCC license
->restructuring? Shouldn't we have a license system which pushes hams to
->achieve things they thought they couldn't do?

Yes, probably so. It is just that most of us believe that testing to Morse Code makes about as much sense as testing for circuit analysis of a type 45 triode tube. Other than nostalgia, neither one makes much sense. Nor do I believe that the new exam has anywhere near the technical complexity that it needs. Neither of us is well served by the current system.

->I not only feel sorry for the old "Extra" Class hams who have seen their
->achievement devalued. I feel sorry for the new Extra Class hams, who will
->never feel the sense of pride the Extra Class license use to bring.

I'm sorry for you, but I'm even sorrier for the system. My personal opinion is that the current question pool was made from a group of technical incompetents whose level of expertise in RF stops just short of a trivial series-parallel equivalent LC circuit calculation. It takes roughly two hours to memorize the "by formula" answers in the pool.

Nor do I believe that "the pool" shouldn't be published. However, as long as I've been teaching this stuff at the college level, I've NEVER given a rote memorization exam. So far as I'm concerned, my midterms and my finals have real kick-ass questions, but you get a week to take them home/library to find the answers. I'm not real sure how we implement this sort of a technique to the amateur Extra exam, but I'm sure there is a better way than we are doing it right now.

All the FCC changed was the code test, it's still just as much theory as before. Compared to a college degree, the extra is like a 3 to 5 credit college course. Or maybe somewhat similar to dreaming up a patent (I have a dozen of those).

The extra is still an achievement, but nowhere as big as graduating college with a BSEE or getting a bunch of patents. Think of a license as a step in the process of going into a career in electronics, but not the last step.

An extra with a tech + callsign 73 de wa2ise

I don't know why you don't, but as for myself, I like the present. If
you don't know about the huge amount of Morse on HF ham radio you
haven't been listening for it.

Look at QST
> or any ham radio magazine and look at the great number of "silent keys" each
> month. The fact is , like it or not, amateur radio is dying and if the
> something is not changed, you will not have anyone out there to talk to!

This is the most fraudulant claim put forth by the codebashers to date.
The death rate for hams is no different than the rest of the general
population.
The percentage of hams showing up in the silent keys columns in the mags
today is no more and no less than ever.
Ham radio dying? Shows what you *don't* know. The rate of growth has
far surpassed the growth of the general population.

> It's obvious that you are retired and not in the business world or you would
> know that "change" is rapid and constant.

You have demonmstrated that you can'd discern the past from the
present.

> Enjoy your Extra Class licenses and the hobby and
> quit living in the past.

What you can't change is the fact that radiotelegraphy is the simplest,
most easily implemented mode of radiocommunications and has excellent
efficiency as compared to other commonly present modes. That is as true
today as it was in 1920. Why did all new hams start out on CW instead of
voice modes when they had to assemble their first stations instead of
flashing the platic at HRO like today? Because it was the easiest, most
simple and effective gear to get on the air! That has not changed, and
will not for the forseeable future.

Dick

You are still confused, Cecil. When the qualification for Extra class
license is reduced to approximately that of the previous Novice class,
the entire system suffers irepairably.

I thought "presentday Tech license" was implied.

What's all this feeling stuff? Do you have all those feelings about your
driver's license? The value of an amateur radio license, like a driver's
license, are the privileges granted by the license.

Guess I missed that one, Cecil ;-)

Point is, though, that the original Tech was truly a "technical" license. Back
then, there was practically no ready-made ham gear for 220 and up. One had to
either convert surplus or homebrew from scratch just to get on the air.

>>[that news was in all the ham periodicals and newsletters]
>
>Yes, I know. What happened was that the surge of applications in the last two
>weeks of April caused many of them to be delayed. But others went through
>quickly.

So...Miccolis has some kind of psychic power to see through
publicly-available databases to determine "quickness?" Goodie.

>By ignoring April and May of 2000, those applications that were not delayed,
>or which were delayed only slightly, are ignored.That is NOT "a truer
picture".

So...the subject was not POST-restructuring? OK... :-)

It is called "'not' a truer picture" by others in an attempt to
dismiss an argument based on pique rather than on publicly-
available data.

>By ignoring April and May of 2000, those applications that were not delayed,
>or which were delayed only slightly, are ignored.That is NOT "a truer
picture".

Ah, but is data from PRE-restructuring somehow "valid" in
showing effects in a POST-restructuring period?

>I can cut and paste too, Len. I think you know I'm right on these points, but
>cannot admit it.

No, I know you are wrong on the POST-restructuring effects.

>>A truer picture of post-restructuring changes is to use FCC database
>>information beginning in June, 2000.
>
>No, it isn't.

Ah, so Miccolis has a priori knowledge unavailable to ordinary
mortals? The only valid license status is that after the FCC
has processed an application. If there is a backlog, those
applications are in a limbo and cannot be counted for a POST-

restructuring effect discussion.

>Restructuring started April 15, 2000.

Did all applications, new or "upgrade" or whatever, get
processed and recorded on that date? They were not.

>Saying it over and over doesn't make a falsehood any more true, Len.

Apply that to yourself. As far as Hans Brakob and myself were
debating-discussing-arguing a point, the point was POST-
restructuring. All that Miccolis is seeming to do is arguing a
different point and trying to show "errors" which aren't there.

>No, that's NOT what I wrote. And it's NOT correct. You are ignoring the
>effect of upgrades. Why?

I'm NOT ignoring "upgrades." They aren't included in what I am
saying because of a lack of definitive, quantitative data on the
number of "upgrades," who went from one class to another class.

If Miccolis wants to argue about the NUMBER of "upgrades," he
needs a quantitative value of that NUMBER that is available for
reference by anyone. Any other argument about "upgrade"
numbers is mere subjective opinion and not factual.

>Two weeks before resturcturing, so as to include all of the post
>restructuring period.

...so as to "include" FCC approval of PRE-restructuring
conditions...that's not a correct way of discussing POST-
restructuring effects.

>Nonsense. The delays did not affect ALL of the applications.

So, give us all a valid, quantitative number of those that were
approved immediately. The rest of us can only work from valid
publicly-available data and such basis is the FCC database
which the tabulators all use.

>Your explanation is faulty. There were thousands of post-April-15-2000
>applications processed by the FCC in late April and in May of 2000.

Nothing "faulty" about it. There is NO valid quantitative number
value on POST-restructuring APPROVED licenses until the FCC
has released the figures.

>>You are attempting discrediting by a false statement of omission.
>
>No. I am pointing out your errors, Len.

All that Miccolis has said is that "I made errors." Were those "errors"
arithmetic? Were those "errors" from using the "wrong" data? The
discussion on "Restructuring - did it make a difference" started out on
the effects of US amateur radio license class privileges FOLLOWING

the restructuring date.

>The only "bad form" is your denial of the obvious.

Which time frame is Miccolis using? Two of us in this thread were
discussing the POST-restructuring effects. That period cannot be
made valid by including data prior to the restructuring date.

>No, yiu haven't. But from the renewal rates, it's clear that the death of
>hams is the main cause of attrition.
>
>>Quit lying.
>>
>Did I write that you wished for hams to die? No. I asked a question. If the
>answer is "no", all you have to do is say so.

Upset? Miccolis made a loaded statement and it went off in his
face. Wounds are not healed by trying to shift blame.

>>My Webster's says "attrition" is defined two ways: "A wearing
>>away by or as by friction" or "A normal loss of personnel as by
>>retirement."
>
>You're not Cecil. Don't try to play his game. He's good at it. You're not.

"Attrition" is clearly defined in dictionaries. Dictionaries are the
accepted standards for word meanings...except possibly in this
newsgroup when some cannot use valid numbers from publicly-
available data, imply their own are more valid, then try to chastise
others for "errors" in not accepting subjective, unreferencable data.

>>The code-tested classes are, as a total, reducing
>>in numbers...by dropping out one way or another.
>
>And the most common reason is....?

...whatever someone wants it to be, subjectively. There is NO
reference point for the reasons behind dropping out. I gave NO
opinion on reasons for dropping out.

Why do you continue to imply "wrongness" by manufacturing
conditions which did not exist?

>In other words, I've pointed out that Emperor Anderson has no logical
>clothes.

...only because Miccolis has tailored his response. [he made
the pants too long...with no buttons...]

I used publicly-available data over a time-period that is logical,
the FCC's processing time included, on post-restructuring. My
only subjective opinion statement was on the TREND of future
US amateur radio licensing and license classes.

>Try reading and understanding Part 97 and the explanations on the Speroni
>site.
>Your denial of the obvious is boring, Len/

The reading and understanding has been done here some while
ago. Miccolis should try to employ some logic to his own
statements rather than a lot of subjective (and imperious) remarks.

The only BORING part of this is attempting to establish conditions
and time-frames which have been WRONGLY applied by another.

Leland C. Scott and another amateur, doug adair, have conspired among each other and have been attempting to start all kinds of trouble in another group for quite some time now. A visit to the cb room will reveal a bit of these folks true nature. Do a back search and see how doug came into the group and how he digressed from there. Leland has just recently stepped up his forging of names of regulars in the other group, targeting me because he does not agree with my political views and, well, to be perfectly honest, he is a bit troubled. Leland has posted under the names "Punisha-of-keyclowns", "keyclown killa", many,, many anonymous names and cotse names, as well as a host of others. He has consistently trolled and posted filthy pornographic items to the cb room and has been forging many regs on there for quite some time, shamelessly letting another licensed fellow amateur take blame. I am a cber, but I have many ham friends. I do not use foul language, I do not use excessive power, and I do not trespass into ham bands. I feel the amateur community needs to be made aware when one of their own can not hold their contempt without stooping to such tactics. Beware this Leland, fellow. It is he that blackens the eye of good will between ops and his type that wish to foster animosity between cbers and ham ops. I invite any of you to peruse the cb room threads, see how Leland was caught red-handed, and make up your own mind. If a post contains obscenities, it was more than likely forged by Leland. This is the only post I shall make. Any others are forgeries. Have a good day.

>>Yes, I know. What happened was that the surge of applications in the >>last two weeks of April caused many of them to be delayed. But >>others went through quickly.

>So...Miccolis has some kind of psychic power to see through
>publicly-available databases to determine "quickness?" Goodie.

I guess "facts" are something that you ahve a hard time with, Lennie? Some DID go quickly...some DID get delayed? YOU dispute this fact?

>>I can cut and paste too, Len. I think you know I'm right on these points, but cannot admit it.

>No, I know you are wrong on the POST-restructuring effects.

Lennie cannot agree on anyone's facts, right or wrong, as long as it counters HIS assertions.

>>Restructuring started April 15, 2000.

>Did all applications, new or "upgrade" or whatever, get processed and
>recorded on that date? They were not.

As ususal, Lennie steps in his own rhetoric within the same post...Here now we see him stepping in his "psychic powers" rib from the frst paragraph as he obviously employs his own powers to tell us what applications got processed on what date.

>>Saying it over and over doesn't make a falsehood any more true, Len.

>Apply that to yourself.

Nope...you first Lennie. You need it more than anyone else here.

As ususal...mostly kindergarten tit-for-tat "not meeeeee" stuff. The very obvious "return to childhood" of advancing age.

>Upset? Miccolis made a loaded statement and it went off in his
>face. Wounds are not healed by trying to shift blame.

A curious statement, in as much as this entire post was an attempt to band-aid his "wounds" from Jim's obvious "direct hit" on Lennie's poor math and statistical analysis.

>The only BORING part of this is attempting to establish conditions
>and time-frames which have been WRONGLY applied by another.

The BORING part is watching you, Lennie the Loser, once again try to worm
your way out of a situation that you got yourself into.

>The only BORING part of this is attempting to establish conditions
>and time-frames which have been WRONGLY applied by another.

As we speak, "commercial interests" are running operational
tests on spread-spectrum data transmission on HF. We're
starting to see the deleterious effects of concentrated
"sharing" SS and conventional modes in the same spectral bands
at UHF and SHF.

HF propagation measurements and forecasts are routine now,
courtesy of equipment, techniques, and studies funded by
Uncle Sam's military purse and easily for sale to the said
"commercial interests".

I agree that it isn't. The FIRST "restructuring upgrades" appeared with processing dates of April 19, 2000. The only true baseline that can be used is the FCC database as it existed on April 18, 2000; the day before the first restructuring changes affected it.

> >No, that's NOT what I wrote. And it's NOT correct. You are ignoring the

Wrong. The FCC database has a field of "previous license class" for each amateur record, so it is exactly possible to determine who when from what class to what class. If the web site you're using didn't use that information, that's YOUR problem, but don't say that the information isn't available.

> Dedication is irrelevant. Effort is irrelevant.

Excellent point, Cecil. I would just add the suggestion to remember that
the REAL purpose of a government-issued license, like the real purpose of
government itself, is to protect the rights of the people. In these cases
of vehicle and amateur radio licensure, those rights are protected from
infringement due to incompetent operation of whatever technological system
that impinges on the peoples' lives. Once that protection has been afforded,
the rationale for additional licensing qualifications disappears.

> In the past, it was very difficult to qualify for a concealed weapons permit

> simply change with time in every field (including amateur radio).

An excellent example of licensure (the old carry laws) being used to
as a social-engineering platform rather than to protect the public
from firearm misuse. Incentive licensing was another such social-engineering
debacle that was supposed to encourage (ie: force) hams to become more
competent by restricting their access to certain frequencies if they did not
comply. Acquiring higher-class licenses became an end in itself and
amateur radio was saddled with an entrenched credentialism that would
have been the pride of any public-school teachers union.

would

Let me get my flame suit on first. It's that obvious?

I hate to denigrate your perception, but I have a lot of years to go until
retirement, and work in one of the fastest "changing" industries.

I don't think people should just "accept" change for the sake of change. If
it is in the wrong direction, than "changes" should be made to make it go in
the right direction.

Jim, an interesting point. Back around 1964 I visited a ham for whom another ham babysat his kids. He had a homebrew 440 transceiver. 1 tube. Superregenerative receiver. I was amazed (back then) by the tiny antenna. All of several inches at most. If he found someone else on, he could communicate for maybe a mile. That was when UHF truely was 'ultra'.

Dropping the Morse code requirement to 5wpm has not decreased the dedication and skill that you have developed. You are still just as skillful and you still have the same privileges, i.e. nothing has been taken away from you. CW still has all the HF ham frequencies and still has all its capabilities to be used in emergencies if necessary. New hams who like CW will use it and their increased code speed will come naturally just like mine did in 1951.

The "I did it so they should have to do it" concept seems to keep creeping back into the discussion.

I didn't have to work nearly as hard for my high school education as my Dad did. He milked a cow and then rode a horse to school. He worked on the farm after school until dark, then studied by the light of a kerosene lantern, and went to bed cold in the winter. Should my Dad resent me because I had it easier than he?

> privileges?

You are still confused, Larry. Examinations are not meant to test
dedication. They are meant to to test qualifications. Licenses are
not a certificate of dedication. They are a certificate of privileges
granted after meeting the qualifications. Any citizen who meets the
requirements, whatever they happen to be at the time, is qualified
by definition. One person may already be qualified. Another person
may have to study/practice for a year. They both get the same license.
Dedication is irrelevant. Effort is irrelevant.

In the past, it was very difficult to qualify for a concealed weapons permit
in Texas. Then Bush signed the concealed carry law and now it is relatively
easy for a citizen of Texas to qualify for concealed carry. If you were
one of the earlier concealed weapons carriers, would you feel disappointed
that there are now lots more concealed weapons carriers? Qualifications
simply change with time in every field (including amateur radio).

Incidentally, the murder rate in Texas has dropped 45% since Bush signed
the concealed carry law.

My dipole is 40ft high and is one-wavelength long on 40m.

> Most real-world 40 meter 1/4 wave verticals won't beat a dipole a quarter
> wavelength high.

Note that I'm not talking about the direction of maximum gain for
the dipole. There should be some nulls off the ends of the dipole.
I want to see the vertical beat the dipole in *any* direction and/or
at *any* take-off-angle.

Modeling indicates that the vertical should be about 20dB better
than the dipole off the ends of the dipole at a take-off-angle
of 20 degrees. I want to see that happen in the real world.

I've got my 40m vertical up. All I lack being functional is installing
a coax connector.

The grass around my vertical was about waist high. I bent down to pick
up something I had dropped and heard a whirring noise. Zap, I was struck
on the hand by a four foot long snake. I grabbed a towel, threw it over
the snake, and wrapped it up in it. Around here, we have every poisonous
snake in the US and one needs to know which one it was. Luckily, it was
a harmless rat snake and non-poisonous. Those snakes have learned to imitate
a rattler by rattling their tails in the leaves and that's what I heard.
They have even evolved with a diamondback pattern although they are
more colorful than a rattlesnake. So this morning, I have a couple of
holes in my hand but no after effects. And I took the snake down to
a little creek behind my house and let it go.

On Fri, 06 Apr 2001 09:36:26 -0400, Jason Hsu <jhsu-no-spam@cotse.com>
wrote:

>I have heard many people lament that new Novice licenses are no longer issued
>and that they provided a good entry point into ham radio.
>
In it's day it certainly was. I had one in it's original form. One
year drop-dead non-renewable license, the second letter in the
callsigns were "n", Novices had small up-the-band slices of 80,40 and
15m cw plus 2m phone. Transmitters had to be xtal controlled and not
run more than 50 watts input.
>
It was the advance of technology which eroded the usefulness of the
license. Back then there was very little VHF activity. Getting on 2m
was tricky and the equpment was alsmost all homebrewed. Of all the
dozens of Novices I knew none of 'em botherd with the 2m privelege.
There just wasn't anybody to yak with, range was very limited, etc.
>
Conversly the 80 & 40m bands virtually crawled with Novices which took
advantage of the piles of cheap WWII military surplus radios and
parts. Getting a 50w Novice station on the air for $50 and often less
was SOP. I managed a Novice WAS on 80 in a few months.
>
Then in the 60s along came cheap & plentiful tube-type commercial
surplus VHF FM radios and the stampede from the HF Novice bands to VHF
FM with Tech tickets was on. Today you can tune the 80m Novice band
for hours at night and never hear one. Interest in Novice band
operations has simply petered out despite the significant
liberalization of the Novice rules over the years.

"Ultra?" A Class A Citizens Band transceiver (near the ham band) was available for purchase in 1958 (Class A and B, UHF CB was available before Class C and D on HF). Superregen receiver that was switched to be a modulated oscillator for transmit. Good for at least half of an LOS path length.

General Electric Company had microwave radio relay equipment on 1800 MHz in 1950, using 2C39 inverted lighthouse tubes for the LO and PA finals. Twenty-four voice channels. US military bought some, later designating them AN/FRC-23 in 1955.

International civil aviation adopted 118 to 136 MHz in 1956, and the US military went to 225 to 400 MHz for aviation comm in 1955.

All kinds of examples available for the pre-1964 period in radio other than amateur radio...

It's already been done by government radio services. Although
that is "preliminary," the major interest by both commercial
and military HF radio users is in ALE (Automatic Link Analysis)
techniques and protocol. ALE can be an intermediate form on
HF for many years in the future. [at least two licensed amateurs
are presently experimenting with ALE techniques on HF]

> We're starting to see the deleterious effects of concentrated
> "sharing" SS and conventional modes in the same spectral bands

That's in shared bands at UHF and higher. Wait until UWB
starts to enter the lower microwave spectrum.

> HF propagation measurements and forecasts are routine now,
> courtesy of equipment, techniques, and studies funded by
> Uncle Sam's military purse and easily for sale to the said
> "commercial interests".

I recall ionosondes for HF first appearing just before 1950,
certainly available by 1952 for government-military use. The
measurement and observation of the ionospher for HF
communications has been going on for over half the existance
of all radio. The techniques (radio metrology) are well-known
and don't have to be any marketable item. Regular measurement
of the ionosphere is a service that can be provided by any
commercial interest from the 1960s onward.

On that, whatever happened to the worldwide HF beacon system timed by the GPSS and written up in QST a few years ago?

>>I wouldn't worry about anything under 2 meters.
>
> Famous Last Words.

Fact: Use of HF as a regular communications medium for government and commercial users is declining but the US military is, and has been using for ten years, the 30 to 88 MHz region for tactical NVIS communications, including FHSS mode. Military aviation worldwide is going to hold onto 225 to 400 MHz for air-to-air and air-to-ground-to-air communications for a long while.

I can live with that, no problem. The most common source of already-
sorted, counted, and tabulated data is the AH0A website maintained
by Joe Speroni. Speroni does end-of-month tabulations although has,
in the past, done some "intermediate" totals such as March 25, a
Sunday.

A problem with using an end-of-April tabulation on the Speroni site
is that it includes license data existing prior to restructuring. That
would make it a false month for discussing post-restructuring
effects. The only dispute now would involve the month of May.
May could be used as "buffer" time to let the backlog of license
changes immediately following April 15 settle down. Using end-
of-June 2000 to end-of-March 2001 is a ten-month period and
should be stable enough to examine effects.

>> I'm NOT ignoring "upgrades." They aren't included in what I am
>> saying because of a lack of definitive, quantitative data on the

>
>Wrong. The FCC database has a field of "previous license class" for each
>amateur record, so it is exactly possible to determine who when from what
>class to what class. If the web site you're using didn't use that
information,
>that's YOUR problem, but don't say that the information isn't available.

Available to the public, yes...available as tabulations on the AH0A
site, not yet. Correction noted. Thank you.

It's a problem for anyone with "mere" 56K V90 modem connections to an ISP in that the two FCC amateur radio databases are 52 MB and 20 MB in size, license and application, respectively. A 52 MB file needs a bit over two hours to download, the smaller file needing about an hour additional. Then there is the problem of setting up a search-and-tabulate program, in itself a straightforward task following the revised data fields under the newer ULS formatting. It is much easier to use tabulated data already processed...since much other time will be spent in arguing against those who say that observation of AH0A site data is "wrong" when it is not wrong. :-)

The FCC does provide for Technician Plus previous-license indicator as the "P" in that data field. That statement comes from the FCC's Memorandum Opinion and Order 01-108, 6 April 2001, page 5 (.PDF file available on ARRL website). Incidentally, that same MO&O states (page 18, item 48) that all further 98-143 commentary and reconsiderations are "Hereby Terminated." :-)

As to effects of Restructuring, there is little evidence that HF-privileged US radio amateurs are expanding into HF, either by license class and special conditions thereof. The trend remains as it was before restructuring: Technician class seeing the 9 out of 10 new licensees and the early Technician class licensees renewing, all other classes as a group decreasing in number. One out of three US amateur radio licensees are now Technician.

If the trend continues it won't be too long before one out of two US amateur radio licensees are Techs. So much for morse code interest... :-)

Dick Carroll wrote:
> Sort of like you and your claim that CW will never be needed again in
> ham radio since there are better modes around...

I have never made that claim, Dick. I said, IMO, it is *unlikely* that
CW will ever again be needed for emergencies. What I have said is that
CW skill should be left up to the discretion of the individual ham and
not be implemented as a governmental affirmative action welfare program.

Some people value storage food and water for emergencies and some don't.
It is a choice for each individual to make. If storage food and water
is someday needed, the first group will be rewarded for their investment
in a winning situation. If storage food and water becomes stale and has
to be thrown out, the second group will be rewarded for their decision
not to invest in a losing situation. Different strokes for different folks.

Some hams value CW for emergencies and some don't. It is a choice for
each individual ham to make. If CW does save the day during an emergency,
the hams who possess CW skill will be rewarded. If CW doesn't ever save
the day during an emergency, the hams who had no interest in CW will not
have wasted their time and effort learning and developing an unneeded
skill. When the Morse code requirement is lifted, every ham will still be
free to develop his CW skill to whatever level he chooses. What is wrong
with live and let live?

That's the way a free country works, Dick. Every citizen should be free
to assess the probabilities and decide to take personal action or not.

>
> So then ham radio operators should just ignore all possiblilty that
> their stations may someday be needed for emergency comms. We see.

I'm not dedicated to emergencies, Dick, are you? I am on standby for
emergencies. That's a huge difference. It means that I can have a life
outside of ham radio emergency communications. And hams should be free
to either ignore or accept the fact that their stations may someday
be needed for emergency comms. A lot of hams have no station at all.
That's the way it should be in a hobby in a free country.

It seems rather obvious to me but in case it doesn't to you:

1. A ham who decides that he needs equipment and skills for emergencies
is free to acquire such equipment and skills. A ham who decides that he
needs CW skill for emergencies is free to progress to any skill level he
chooses.

2. A ham who decides that he doesn't need equipment or skills for
emergencies is free not to acquire such equipment and skills with the
exception of Morse code. A ham who decides that he doesn't need CW skill
for emergencies should be free not to acquire such skill but he isn't free
to choose because of an outdated section of a treaty which requires a
governmental affirmative action program.

2227. Freeband Export Radios

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-08 03:25:15 UTC
From: Train <cbmods@optonline.net>
Message-ID: <3acfcc0b$1@news2.mibx.net>
Source record: 6480

I don't usually post to ham groups but there has been an awful lot of criticism of freebanding and freebanders in general. I have been in the CB tech repair business for years and have seen nothing but growth and expansion among freeband people. There is no sign this will soon abate, so it is high time SOME in the ham radio service face the facts.

Fact: hams should not be concerned at all about this issue. What goes on within 27-28 Mhz is none of their business.

Fact: most of the squawking is done by rule-obessed no-lifes who can't stand to see other people enjoying themselves.

Fact: high-quality SSB export radios like the Emperor, Ranger, Galaxy, and others that go from 25 Mhz to 32 MHz are being marketed by big companies because the FCC has admitted it can't be bothered to enforce trivial rules. If it is OK by the FCC then it is no one's business to squawk, ESPECIALLY hams who's frequencies are not part of the equation.

Fact: the same goes for RF power amps. Freebanders can responsibly run power and are capable of using it wisely.

Fact: many families out food on the table from businesses that operate to serve freebanders. There are much worse crimes to go after than those who ignore trivial and outmoded FCC rules.

All the bitching an moaning needs to stop and some mutual RESPECT shown between hams and freebanders.

Train

Sir,
I agree that your rise to extra was truly do to hard work and desir. I think your story its most of the folks that have gotten their extra class. But i think you have missed the point entirely. Our hobby is not one that is shared my many individuals. Times have changed and we hams must change or we will be lost in the shuffle. You, like most hams think we have been given these bands we have by God.
They are not, they were given to us by the grace of government, and world agreement. Our bands are some of the most choice ones around. Don't think for one minute that if the big boys in the communication industry wanted the whole she-bang belive me they would get it. Where would you be - out in the cold like the rest of us. So instead of be-moaning the fact that code is not needed,but enjoy the skill that you have. If you and others like you don't wake up and smell the roses. You may find that instead enjoying this hobby you will have alot of expensive junk. By the way do you ride a horse to work. You know what happened to fellows that laughed at Henry Ford? Well neither do I. Nobody remembers the nay sayers. You could encourge new hams to join our ranks then display your code skills let that
be testament. You know the old saying you draw more flies with honey than vineger.
73's and gud sending

Okay, but the people who are allocated this spectrum might not be
happy about this.

The rules aren't just some arbitrary kids' game, they exist so everyone can
benefit from the use of radio spectra.

See above remark about the people who are allocated this spectrum.

I have seen enough of your posts to know you usually make sense -- a lot more sense than you are making here.

1. Your tormentors have in general been Codeless Techs who seem to be in need of love. Below 28 MHz most of us old guys could not care less; I sure as hell don't. To some extent you are reaping the fallout of some interesting politics within the Amateur Service but we can't keep headcases from passing exams any more than you can prevent their buying radios.

2. Beyond that, substitute 'methamphetamine' for 'freeband' and look at your post again. Lots of things exist that would not in an ideal world. Doesn't make them desirable.

3. A gentleman, it is said, is one who ignores the trivial, is a cast-iron SOB about more important things, and has sense enough to know the difference. Lots of things exist in the 25-35 MHz range including the ten-meter ham band. Are we supposed to roll over and play dead?

4. RESPECT is an interesting term. The black community picked up one version of it from cracker whites and it has gotten a number of them killed. Do you expect deference from outlawry? If so, what is the difference between a freebander and a pimp? Diana Ross notwithstanding, R-E-S-P-E-C-T (sock it to me) is no way to run things.

If you mean genuine admiration for achievement, for what might this be extended?

If the idea is 'make nice' and don't state the obvious, take it up with the chaplain.

In my football coaching days, I set as the ideal for respect having the other team lurch toward the showers beat to shit but saying something like, "And they beat the crap out of us within the rules". It is the difference between competition and thuggery, the difference between a boxer and a street brawler.

5. No discussion of 'power' is complete without pointing out that it is blessed useless in the lo-VHF frequencies. If 100 watts won't do it, fix your antenna, learn to operate, or go home. Manhood problems are no excuse for moose and dirty linears on either side of 28.

There is a basic lack of understanding: Given that a few weeks with Morse Academy http://ah0a.org and some quick bathroom reading at irregular intervals will make 28.3-28.5 legal in no time and some more reading while picking up the kid at school will make all of ten meters legal, there isn't just a lot of sense in freebanding, period, if communication is the object of the exercise. So amateurs tend to suspect that freebanding has much the same motivation as mis-aimed fog lites on a clear day, "Look at me, I'm Sandra Dee, lousy with virginity." The lamps are known as Virginity Lights in some circles; watch some dude with his 'kewl' pickup (or the ubiquitous Blazer) howl when the arresting officer notes that on the ticket.

The essence of your argument is 'prepare to be overwhelmed'. OK, I am prepared.

Dick N&#65533;BK

2233. Reconsiderations history, tech + info maintained, 5wpm extra reaffirmed

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-08 05:04:24 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <3ACFF158.186BE591@ix.netcom.com>
Source record: 6486

The FCC does provide for Technician Plus previous-license indicator
as the "P" in that data field. That statement comes from the FCC's
Memorandum Opinion and Order 01-108, 6 April 2001, page 5 (.PDF
file available on ARRL website). Incidentally, that same MO&O
states (page 18, item 48) that all further 98-143 commentary and
reconsiderations are "Hereby Terminated." :-)

That includes a WAD petition for reconsideration to restore 20wpm
for extras. FCC says no, it's gonna stay at 5wpm.

see
http://hraunfoss.fcc.gov:8888/edocs_public/attachmatch/FCC-01-108A1.txt
for the gory legalistic details.

Quoted text about the "extra lite", aka "novextra" (note that I am one):

As noted above, the Commission eliminated the twenty wpm Morse
code
proficiency examination as a federally mandated licensing
requirement
because it was not in furtherance of
the purpose of the amateur service and it did not continue
to serve a regulatory purpose. 41 WAD II has
not shown that the Commissionï¿½s conclusions were in error.
Further, we note that since the Report and
Order was released, there does not appear to be any
decline in the proper operation of amateur stations. 42

end quote.

I listened to the HF bands before April 15, 2000, and I haven't
seen any decline that wasn't because of newbie errors (which
go away as we newbies learn and correct ourselves).

2234. "Gentlemen's Agreement"

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-08 05:47:36 UTC
From: Scott McClements <yetbbwa@grove.iup.edu>
Message-ID: <3ACFFB78.B20BBD56@grove.iup.edu>
Source record: 6487

I am studying for my ticket and came across some questions refering to a "Gentlemen's Agreement".

Ex.

Which of the following frequency ranges is reserved by "gentlemen's agreement" for DX contacts during international 6-meter contests?

D. 50.100 to 50.125 MHz

--

A quick look in the ARRL Handbook and I didn't see anything about this "agreement"? Where is this written if anywhere?

Thanks,

Scott McClements

You are confused, Dick. The qualifications for the Extra class license
have NOT been reduced to approximately that of the previous Novice class.
It only seems that way to you because you are more knowledgable now than
you were when you took your Novice exam. Please get a grip on reality and
realize that, no matter what a dumb-$hit you seem to be now, you were a
lot more of a dumb-$hit in the past. And please realize that, in the 21st
century, Morse code skill has very little to do with qualifications for
an amateur radio license of any kind. You said in another posting that you
like the present. If so, why don't your quit bitching, moaning, and whinning
about the present?

I have always thought that was why the original Tech was begun, so that anyone interested would help develop VHF/UHF, which was almost unused in 1950. Virtually no gear was available and what was was exremely expensive. I don't know how much good the Tech ticket actually did, virtually all the few I ever knew in the 50's-60's were definitely not inventors or developers. Of course YMMV.

Do you get the feeling in the pit of your stomach that the ARS is being
set up
for a Humpty-Dumpty type of fall? There is a nagging feeling that all
this
dropping of qualifications that shoves the ARS ever closer to a CB-like
atmosphere is not without some goal in mind......

You are still confused, Cecil. When an applicant can pass all tests
through Extra without knowing anything significant about radio theory or
practice, and needs only 5wpm code, the de facto reduction of Amateur
Extra class licensing standards to the Novice level is fait accompli,
whatever name is attached to it.
My current level of knowledge has nothing to do with it beyond my
ability to see and understand what is there.

I have seen enough of your posts to know you usually make sense -- a lot more sense than you are making here.

"What about you, Dick? In rec.radio.cb you support freebanding and amps. Here you act snotty. Hmmm?"

1. Your tormentors have in general been Codeless Techs who seem to be in need of love. Below 28 MHz most of us old guys could not care less; I sure as hell don't.

"That's the Dick we know and love. Good boy. Don't step out of line again mister"

To some extent you are reaping the fallout of some interesting politics within the Amateur Service but we can't keep headcases from passing exams any more than you can prevent their buying radios.

"If you are an example of this you are a prime one. Enough said"

2. Beyond that, substitute 'methamphetamine' for 'freeband' and look at your post again. Lots of things exist that would not in an ideal world. Doesn't make them desirable.

"Realism is the mark of a true intellectual. Let us see if you can pass the test"

3. A gentleman, it is said, is one who ignores the trivial, is a cast-iron SOB about more important things, and has sense enough to know the difference. Lots of things exist in the 25-35 MHz range including the ten-meter ham band. Are we supposed to roll over and play dead?

"In a word, yes. The opposition is overwhelming. The old must go out and the new must come in. Your hobby is dying. If 10 and 12 meters must fall, you have no choice but to let it"

4. RESPECT is an interesting term. The black community picked up one version of it from cracker whites and it has gotten a number of them killed. Do you expect deference from outlawry?

"What about the outlawry of 3950 and 14310? Your slip is showing Dick"

If so, what is the difference between a freebander and a pimp? Diana Ross notwithstanding, R-E-S-P-E-C-T (sock it to me) is no way to run things.

"Simple. But we the enlightened do not expect you to understand. Freebanding harms no one. Pimping does. Except when it is a ham turncoat like you lurking

in rec.radio.cb waiting to rat out CBers"

If you mean genuine admiration for achievement, for what might this be extended?

"It might be extended to freebanders and those that want to operate radio transceivers without the complications of licensing. A little respect is in order to your betters"

If the idea is 'make nice' and don't state the obvious, take it up with the chaplain.

"You and your dying hobby need a prayer, not me and mine"

In my football coaching days, I set as the ideal for respect having the other team lurch toward the showers beat to shit but saying something like, "And they beat the crap out of us within the rules". It is the difference between competition and thuggery, the difference between a boxer and a street brawler.

"Following rules does not a man make. If the Constitution prevents me from talking on 24 MHz I want to see where it is written so"

5. No discussion of 'power' is complete without pointing out that it is blessed useless in the lo-VHF frequencies. If 100 watts won't do it, fix your antenna, learn to operate, or go home. Manhood problems are no excuse for moose and dirty linears on either side of 28.

"Too bad for your POV Dick. What we want we will simply take. Time you learned the rules, boy"

There is a basic lack of understanding: Given that a few weeks with Morse Academy http://ah0a.org and some quick bathroom reading at irregular intervals will make 28.3-28.5 legal in no time and some more reading while picking up the kid at school will make all of ten meters legal, there isn't just a lot of sense in freebanding, period, if communication is the object of the exercise. So amateurs tend to suspect that freebanding has much the same motivation as mis-aimed fog lites on a clear day, "Look at me, I'm Sandra Dee, lousy with virginity." The lamps are known as Virginity Lights in some circles; watch some dude with his 'kewl' pickup (or the ubiquitous Blazer) howl when the arresting officer notes that on the ticket.

"There you go again with the authority figures. They do not scare us, Dick. Take off the bogeyman costume"

The essence of your argument is 'prepare to be overwhelmed'. OK, I am prepared.

"I hope you are prepared for freebanding to prevail and spread to your precious hammie bands"

Freebanding is OK because it's lesser crime than some other crimes?
The bald-ass bottom line is that under existing federal statutes a
freebander can wind up in a federal slammer and so can the suppliers
of the equipment he uses. You have to be a complete idiot to put you
and your family at any such even remote risk. There's a guy out there
right now who just got whacked by the FCC with a $17,000 forfeiture
for operating in the ham bands without a ham license. That's a lotta
pork & beans. Another one is doing some hard time. It can't happen to
you, huh?
>
I operate in rhe low end of the 10m ham band, I'm in there with the
freebanders and they're a minor nuisance from the operational
perspective. But that's not what pisses me off, what pisses me off is
that they're a bunch of criminals, abusers of other folk's rights
under law and they're anarchists. There is no room for you people in
American society never mind 10m.

And you're still full of stinky stuff. The ARS is loaded with
clandestine
freebanders -including you, if anyone can believe what you have said.
Yeah, I know, you say when a freeebander gets a ham license he is no
longer a freebander. That's not all youv'e said that is 100% wrong.
CW will be used as long as there a few OTs who still know how to use
it. When they're gone, CW is essentially gone as a useful communications
tool.
When there is no longer any effective difference between hams and
freebanders/CBers, then there can be no rational nor effective defense
of any part of our spectrum. You are helping to bring that sky down as
much as any (other) rabid codehater.

What is the question number? Not a well worded question. The "gentlemen's agreement' are also know as "band plans", which are not a FCC regulations. These plans are developed to reduce interference among operators. A amateur radio license requires that you accept interference and to not cause interference. So indirectly, bandplans are an operating requirement. Operators use 50.100 to 50.150mhz for international contacts, which is very very weak signal work. I believe that segment is always reserved for international DX, not just during contests.

I show the international 6m DX bandplan as 50.100 to 50.125, with the American calling frequency to be 50.125. There was a movement to increase the DX segment by moving the American calling up to 50.200.

Band plans are reported in ARRL's QST magazine. Look for "The World Above 50mhz" written by Emil Pocock, W3EP. You can also pick up free bandplan charts at the hamfests.

These questions are the frequency memorization questions. They other similar questions on the tests. The band plans are extensive, and you can not remember the entire plan, so memorize the question answers. Good luck.

There was practical value in dropping the General test to 5wpm and that
was noted in my comments. The only practical reason for dumping 20wpmfor
Extra was to allow you and a number of other codebashers to get a novice
grade Extra.

I see it a little differently. Back during the Reagan years, the FCC was being nagged to open up bands for paid customers. Their only defense is that the bands are being used already. The Congressional Red Army (wanting all that commercial money) looked at the books and says "where are they?" and the FCC decided to boost the number of hams overall (thus the no-code Tech) AND boost the number on HF (thus Novice Enhancements).

Those same middle-managers are still at FCC, and they see that ham radio is almost trouble-free, compared to commercial radio enforcement.

Consider the following common scenario. Someone becomes a ham, buys a radio, and puts up an antenna on the back of his car. That is so much fun, he puts a rig in his apartment, using a mag-mount on the balcony. Then he gets into packet, and discovers that he can stick a digipeater on the top of the skyscraper where he works for a couple of day's pay. A couple of months later, he moves to the suburbs and decides that he wants HF privs, so he goes down and passes the upgrade exam. Then he puts up a mast with a cheap, used-from-the-hamfest antenna. That works okay, but he then goes from 100W to 500W, and wants a better antenna system, which consists of a 40-foot tower and a really good antenna. After a few weeks, he climbs the tower again to mount his VHF antenna, a UHF antenna and to string a wire for his daughter's SWL radio.

Total FCC investment in the entire package: Accepting 1 certification that he has passed the Tech, another for the General, and a license for the digipeater, all of which take a total of 5 minutes' work.

The same package for a commercial user? Two user licenses (each requiring coordination for EACH frequency being used), 7 footprint maps, and about 50 man-hours out of the Commission budget, to take up a very small chunk of spectrum. If there is any complaint about interference, a challenge to allocation, or addition of more radios (when cars begin to breed), the resource drain goes up in a big hurry.

Hams are big on the "self-policing" idea, meaning that there are thousands of frequencies that the Feds don't have to monitor. Commercials users demand INSTANT control of any problem, and that's expensive, too.

Trust me, they would rather have us than the commercial guys, and that's a large part of the reason that they have made it easier to get a license, made the license longer, and reduced the code.

>Subject: Freeband Export Radios
>From: "Train" cbmods@optonline.net
>Date: 4/7/01 10:25 PM Central Daylight Time

Dear "Train",

The first fallicy to your post is exeplified in the fact that you do not sign your REAL name. This is because you are engaged in an illegal act and you cannot do so with out bringing law enforcement down on your head and you know it.

That should say enough, but we shall comment anyway.....

>I have been in the CB tech repair business for years and have seen >nothing but growth and expansion among freeband people. There is no >sign this will soon abate, so it is high time SOME in the ham radio >service face the facts.

Here's some facts for you:

(1) This activity is illegal. Both by doemstic law and international treaty. That it is there does not make it any less illegal.

(2) The FCC has had quite a bit to say about criminal activity on these "bands", and I imagine it won't be long before they are at YOUR front door.

>Fact: hams should not be concerned at all about this issue. What goes >on within 27-28 Mhz is none of their business.

Fact: What goes on here IS my business. The radio spectrum is regulated (in the United States) by the FCC and numerous other radio services need this spectrum too. It is every citizen's business, regardless of licensure.

Secondly, you and other sloths of the airwaves don't know when to stay put. The "freeband" is now quite prolific in the lower part of 10 meters, ergo you and your like ARE my concern.

>Fact: most of the squawking is done by rule-obessed no-lifes who can't >stand to see other people enjoying themselves.

Fact: This is not about letting people "enjoy" themselves. It's about having something I worked hard to obtain being trashed by thieves who feel "at liberty" top do as they will, irrespective of what interference they may induce. I don't tolerate vandals who trash my property, and I don't have to tolerate lowlifes such as yourself.

>Fact: high-quality SSB export radios like the Emperor, Ranger, Galaxy, >and others that go from 25 Mhz to 32 MHz are being marketed by big >companies because the FCC has admitted it can't be bothered to >enforce trivial rules. If

it is OK by the FCC then it is no one's business >to squawk, ESPECIALLY hams who's frequencies are not part of the >equation.

Fact: Ham frequenceis ARE "a part of the equation" in as much as your freeband buddies are settling there, too.

But as for the FCC allegedly saying "it's OK", then you had better start reading a bit more of FCC enforcement actions lately. If you are selling these radios, modifying or promoting them, you are subject to search, seizure and arrest. I hope you get to "enjoy" all three.

>Fact: the same goes for RF power amps. Freebanders can responsibly >run power and are capable of using it wisely.

There is no "fact" to this. It's illegal. Period. I don't care if you have the signal strength of VOA and the signal purity of the Voice of God himself.

>Fact: many families out food on the table from businesses that operate >to serve freebanders. There are much worse crimes to go after than >those who ignore trivial and outmoded FCC rules.

Then I suggest they find something LEGAL to do. If they go hungry because you get busted, it's YOUR fault, Trainy. Not mine...Not any ham radio operators...Not the FCC's...Not anyone else...YOUR fault.

>All the bitching an moaning needs to stop and some mutual RESPECT >shown between hams and freebanders.

I have no more "repect" for freebanders than I do for the purveyors of "recreational pharmeceuticals".

You and your like are breaking the law. There are some very valid reasons for having these regulations in place. You are making it difficult for the LEGAL users of this spectrum to use it as they are allowed.

And by the way, "hams" are not the only legal users in this part of the spectrum. You do not realize the trouble and frustration you and your thieving friends cause.

I hope you wind up in jail, your "wares" confiscated and a criminal record established, "Train". How will your family feel about your "job" then? If you are so concerned about the "food on the table" for them, maybe you should think about THEM first, instead of some childish rationaliation about why YOUR form of lawbreaking is "ok".

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

I agree completely. Passing the exams is a worthy accomplishment,
but it shouldn't be taken too far. Most certainly a person should
never base his judgment of the value of ham radio on what piece of
paper he has in his pocket (the license). Nor should his judgment of
the value of another person be based on what piece of paper that
person has in his pocket.

What "forgery?" The only "crime" there was not using
conventional newsgroup formatting; i.e., the right arrow [>]
to indicate a quote from a previous message.

The cynical-chic commentary of McCollum is difficult to
forge, meandering into all sorts of "analogies" either in
error or not being on the subject of radio.

2264. Re: Reconsiderations history, tech + info maintained, 5wpm extra reaffirmed

>Memorandum Opinion and Order 01-108, 6 April 2001, page 5 (.PDF
>file available on ARRL website). Incidentally, that same MO&O
>states (page 18, item 48) that all further 98-143 commentary and
>reconsiderations are "Hereby Terminated." :-)

The above paragraph is a quote from my posting and did not
originate with Mr. Casey.

>That includes a WAD petition for reconsideration to restore 20wpm
>for extras. FCC says no, it's gonna stay at 5wpm.

It takes in several RMs, dismisses most of them, and really only
includes statements about the state/fate of Technician Plus
class licensees. A couple of items in the MO&O make a few
changes in English of the existing regulations.

>see
>http://hraunfoss.fcc.gov:8888/edocs_public/attachmatch/FCC-01-108A1.txt
>for the gory legalistic details.

That goes through the Search from FCC home page, to EDOCS
and its rather formidable fill-in search criteria page, depending on
one's ISP. Result of a successful search offers three choices of
the same document. PDF is easier to read than the TXT version
and the Adobe Reader is free. So is the MS Word Reader, many
FCC documents are in Word format.

=====

A small black helicopter can be heard. Except for a very major
R&O such as 99-412, FCC documents concerning amateur
radio appear FIRST via the ARRL website. While that is a nice
service for ARRL members and a self-boost inducement to join,
the FCC serves ALL citizens, including 3/4ths of all US amateur
licensees who are not ARRL members. Documents such as
FCC 01-108 appear only in FCC Daily Notices...they aren't in the
Headlines of the Wireless Telecommunications Bureau nor on the
WTB's sub-page for Amateur Radio (that page still carrying the
RMs which were dismissed by 01-108 as of Sunday, 8 April).

The major task of the FCC is regulating communications. It
would seem reasonable that the FCC should afford the citizen

the same timely notice of new regulatory change information
as a special interest group such as the ARRL.

Maritime service no longer uses CW. What years are you talking about?

> >Are you proficient in medical first aid, CPR, and AED use?
>
> Advanced first aid and CPR.

Excellent. While radio or wire communications (including cell phones) are important, CPR is a skill that can save lives. Technological and operational changes have made Morse code exam requirement unnecessary , and not in conformity with 5 USC706(2)(A). I submit that first aid and CPR proficiency is equally or more important then Morse code proficiency.

It long past time for the FCC to: vote for deletion of ITU rule S25.5; take exception to the rule if WRC 2003 does not delete it; and delete 47 CFR 97.503(a). It is the 21st century, let move on.

Message-ID: <I%3A6.251$uV5.293540@news.uswest.net>
Source record: 6572

On Friday (4/6/1) the FCC released an MO&R which dismissed/denied
all of the petitions (QCWA, ARRL, WAD, Teaze, Speroni, and
more) relative to restructuring

Regarding the Speroni petition (more CW bandwidth for Novices)
which I thought was a no-brainer and would easily be adopted,
there was a particularly telling comment:

"Additionally, we believe that we should allow the
amateur service community to reach a concensus
regarding a comprehensive restructuring of operating
privileges for all licensees BEFORE WE EXPEND OUR
RESOURCES in a proceeding addressing this matter."

In other words, "We don't have time to listen to your
arguments -- get your (stuff) together in one sock before
you bother us again."

Note also that in some areas, the "local bandplan" may deviate from the
national one. However, such will usually be noted on some local organization's
literature (or web site).

My ISP sends my browser directly to the txt file without passing thru
the search page, which is quite formidable. I chose the txt file as one
can cut and paste from it, and I don't have word.

And in their typical shortsightedness, a current "Technician" that also has an "N" in the previous license indicator is ALSO a "tech plus" - having upgraded from Novice instead of "downgraded" from "tech plus." ...But of course, our government is not smart enough to realize that.

Summary: Therefore, who do we KNOW is a "tech plus" when it says Technician?
1) Those who have a "P" as their prior license class.
2) Those who have an "N" as their prior license class.
3) Those who were licensed before February 14, 1991.(*)

(*) Really, due to FCC processing delays back in 1991, there is another, later date in 1991 that should be used (I think it's in April). Whatever that date was, marked when the first POST-02/14/91 test was processed. This is similar to using April 19, 2000 instead of the magic April 15, 2000 date as the periodic border....

Too bad you have gone the long way around the bend Doug. Not only are you no longer regarded seriously, but you managed to shoot any allies you had, or could have had, in the back. So if that is what you tried to do, then you succeeded well. Your on your own Doug.

If anyone has any questions about who posted what a quick check of the message headers is all that is needed.

I used to be a tech +, but I decided it would be best to upgrade
partly to avoid this issue. I'd advise such tech +'s to study up
and go for the general, or even extra (that's what I did). Also,
HF is fun!

If you have a tech + dating back from before 1987 IIRC, assuming
you kept your old expired copy of your license when you renewed,
you can cash it in for a general without taking anymore tests. I imagine
everyone who could probably already did by now, though.

My point is that an upgrade will lock your code credit in.

I said in my WT Docket #98-143 comment: "The law requires that the Commission hear the petition or to state valid legal grounds for rejection. A lack of consensus of the Amateur Radio community is not a valid legal reason. The FCC is required to decide petitions in the public interest, not by consensus of the licensees. There was no legal justification for the FCC to rely on the ARRL and QCWA positions; it was the FCC duty to make its own determination of the public interest. " This comment was made in regards to FCC staff member John Johnson's rejection of Jim Willis' petition.

Still applies today. I do agree with your conclusion; however, as we both know, it very hard, if not impossible, for this group to reach a consensus.

When a consensus can not be found it is the job of the Commissioners to lead way. It is their responsibility to make a decision.

I undestand it as being "We at the FCC don't see any reason to change
things with respect to this at this time, as we don't see a consensus from
the community (hams) for a specific change to be done". Besides, I
didn't think there were that many novices left anymore.

It's not for the FCC to make arbitrary changes for the hell of it anyway.

Separate license for the digipeater is no longer required
unless it's a "club" station.

>The same package for a commercial user? Two user licenses (each
>requiring coordination for EACH frequency being used), 7 footprint maps,
>and about 50 man-hours out of the Commission budget, to take up a very
>small chunk of spectrum.

All done by the licensee, his consultant, and the private
sector frequency coordinator. The FCC no longer does the
drudge work. If the coordinator approves the application
(submitted electronically by the applicant to the coordinator
and forwarded by the coordinator to the FCC, again
electronically) the FCC issues the license essentially
untouched by human brain unless there is a problem. Even then
the coordinator has the primary responsibility to resolve
issuance problems and disputes.

I once appealed to the FCC when I felt that the coordinator was
putting up ureasonable documentation barriers for my client to
meet when the client applied to set up a system to replace
someone else's abandoned system. Their reply was "sorry, bub,
the coordinator has the final word nowadays".

>If there is any complaint about interference,
>a challenge to allocation, or addition of more radios (when cars begin
>to breed), the resource drain goes up in a big hurry.

Done by the coordinator under a MOU with the FCC.

Doesn't surprise me. All it takes to renew is Form 605 and a stamped envelope.

>Like I should talk. I was off the
>bands for most of a quarter century, all I did during that hiatus was
>renew my ticket. It's a nobrainer. Thankew k3nl for remiding me that
>my ticket was 18 months past it's expiration date.

omigawd - I will thank him next time I work him or see him. But I can understand how it happens. Ten years is a long time, and it's easy to lose track of when the license actually runs out. Plus the renewal window is only 90 days wide out of 10 years (3 months out of 120).

> Renewing is a
>helluva easier than taking the freaking tests again,

You'd have no trouble at all. Biggest headache is getting to a VE session. Plus taking all the guff from the locals about it.

>never mind,
>certainly in my case, losing my beloved antique 1x2 if I didn't renew.

Unless somebody got it, you could get it back. For a price.

Hans,

Your comments are right on the money. I would add the following interpretations of that paragraph, though:

"We gave you hams an extra-long comment period on the restructuring NPRM to make your cases. If you didn't convince us then, you're not gonna convince us now."

"We have very limited resources here at the FCC. Last thing we want is more admin work. More license classes? More complex test procedures? Further review of this whole mess? Forget it!"

"We made our ruling. To change it now would be to admit we were wrong. Government agencies just don't do that."

It really is up to us. Just like it always has been.

Why not write them a nice long letter, Larry. Be certain to include
material about what their duty is. It would be great if you could throw
in some of your best pseudo-legal stuff.

Maybe they'll post it next to the water cooler with some of Len Anderson's gems.

Only because Reily Hollingsworth has successfully cleaned up
14.313 and much of 75 Meters. It's now too hot to conduct this kind
of stuff on ham radio as the FCC DF equipment (coupled with the DSCS
satelite system) can pinpoint an RF emitter from DC to daylight anywhere
on the planet in 5 seconds. Therefore, all the great old QRM'ers
we have come to know and love from 14.313 are now down here on the newsgroups.
Kind of a shame really as it was always more spontaneous in it's
comedic value when it was on the air instead of having to
read it in cyberspace. I sorta miss 14.313 really, it was ham radio's answer to
Comedy Central. (if anyone can say "hello" to "bathroom-man" for me, I would
appreciate it! He helped me diagnose and fix my malfunctioning toilet
on 14.313 a few years ago. He may have been an un-ID'd QRM'er but he
has sure got to me a master plumber in real life. He actually diagnosed
the problem on the air right on the nose having never seen my commode)
Stuff like this you miss from the .313 of the olden days, along with the nightly
Mike and Judy show which was no doubt the most popular soap opera on
20 for many years...

Here is what is happening. The government can do what ever it wants. It is slowly doing that. The people want one thing or tell the government one thing and the government does what ever it wants. Even if the government sides with a minority view they lose if the majority wants something else. The bottom line is all lose if the government goes with the minority view. Georgia is a great example of this! So we will probably lose ham radio in time. I would gladly trade 220 MHz for 27 MHZ and I would gladly trade 2 meters for 24 through 30 MHz

Sounds like a case of remembering all good if fact there was no good and your in denial! Good
work Riley Holingsworth. Now if we could have the FCC get Darrel Beard so all this illeagal freeband activity can stop in Madison, Clark, Oconee, Franklin, Ebert, and Banks counties here
in the great state of GA.

2298. Leland Scott Is Innocent

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-09 02:34:58 UTC
From: Anti-TwistedhedGroup <antitwisted@cotse.com>
Message-ID: <3ad111c2@news2.mibx.net>
Source record: 6603

To Whom It May Concern:

As far as we know Leland Scott has done nothing except to occasionally speak out in disapproval of illegal CB operation in this public forum. He is not now, and has not ever participated in organized Anti-KeyClown or TwistedhedTweakers actions.

To the best of our knowledge, he has posted nothing under any screen name except his own. We who opose *Twistedhed respect Leland for his views and wish to go on record as stating that he has no ties to us or any other AntiKeyclown personnel. We are soley responsible for all tweaking, baiting, and embarassing of Twistedhed.

Mr. Twistedhed has, as usual, succumbed to his own half-baked and deluded theories about who is doing what to whom. He has barked up many trees, all of them wrong. It has been a pitiable, laughable spectacle, and one that we have enjoyed immensely.

But now the time has come for Twisted to apologize to Leland Scott. Following this, we advise him to spare himself further shame and embarassment and leave this newsgroup for good.

Sincerely,

Anti-Twistedhed Group
http://www.twistedhed_pulls_his_peepee.com

*Twistedhed@webtv.net is a notorious freebander and CB outlaw who frequently posts his drivel in rec.radio.cb and other forums.

You should be. I was proud when I got mine (1970).
>
>Now the FCC has taken my Amateur Extra license and made it an almost
>worthless piece of paper.

Your accomplishment is the same as it ever was.

> It now only takes one 50 question test to get
>from General to Extra Class, and there is no code test whatsoever.

True. But the trend towards easing the requirements has been going on for 25+ years. For example, there used to be a requirement that you have at least a General for two years before they'd even let you try for the Extra. That was reduced to a year, then eliminated entirely. The question pools used to be secret - the tests used to be only given at FCC offices - you used to have to send 20 wpm to the satisfaction of the examiner (with a straight key, unless you provided a bug or paddles). No CSCEs, and a 30 day wait to retest if you failed. All gone, one by one.
>
>Forget the "code" versus "no code" debate. Shouldn't it be take the same

>never feel the sense of pride the Extra Class license use to bring.
>
Here's an analogy:

In running, a "marathon" is currently defined as a run of 26.22 miles. Almost anyone who can run a mile can complete a marathon if they are willing to do the training. (I know - I've done two of them). But it's not easy. Being able to claim the title "marathon runner" is quite an accomplishment.

Suppose the marathon distance was refined as 5 miles. Lots more people would be able to call themselves "marathon runners" if that happened. Running 5 miles is quite an accomplishment, but it's not the same thing as 26.22. The title "marathon runner" would no longer mean the same thing.

But the accomplishment of the 26.22 mile folks would not be diminished. Only the meaning of the title changes.

I got the Extra back in 1970 mainly because I wanted all license privileges. But I didn't stop at 20 wpm or the Extra theory of 1970. Those things were the beginning, not the end.

Neither am I.

>There should be some nulls off the ends of the dipole.

That all depends on things like ground conductivity, system balance, other
conductors in the area, etc., etc. That's why I said "real world" - all of that
stuff gets into the act whether we want it to or not.

>I want to see the vertical beat the dipole in *any* direction and/or
>at *any* take-off-angle.

Ahhh - good point. It probably won't be better unless we get conditons of very
low takeoff angle, and the vertical has a very good ground system. How many
radials and how long?
>
>Modeling indicates that the vertical should be about 20dB better
>than the dipole off the ends of the dipole at a take-off-angle

I wouldn't count on it unless you have really good ground conductivity and
lotsa radials.

You live a charmed life, Cecil. The classic "snake in the grass". Glad it was
the harmless kind. How's your hand now?

Reminds me of the time I bent down to pick up a piece of 37 conductor cable
(diameter: about 3 inches) and when my hand was about six inches from the
"cable" it slithered away into the weeds...

Personally, I don't trust any animal that doesn't have shoulders.

I am not arguing for or against any request in FCC01-108. A FCC decision on
a matter that its is condition on an amateur radio community consensus is an
arbitrary decision to make no decision. While I understand the FCC desire
to close WT Docket #98-143, it should be apparent that the FCC has not
completed it work.

What is there to respect about illegal operation? If you want respect, either operate on the 40 allocated cb channels using power within the legal limit for cb with equipment certified for the cb band, or get a ham license and operate legally on the ham bands. You don't get respect until you do something that deserves respect.

I didn't "get in your case", Hans. It was a bit of ribbing.
Unfortunately you didn't take it that way. A bit of childish whining on your part follows, I see. I am not surprised, in retrospect. A few weeks ago you addressed my preference to not use "eQSL", and then made a snide comment that I had responded to YOURS, and said it was a "big hairy ***** deal".

I replied that since I "knew" you I considered it a personal courtesy to respond. Of course, after your snide comment on the matter, I really didn't expect an answer to THAT, and you certainly didn't disappoint me.

It's a shame that a person of your alleged military and professional career has come to this. Too bad. You could have been a contender. Now it's just Depends.

Oh well........

No 73 for you. You'd only find a reason to insult THAT, too.

2312. "Gentlemen's Agreement" [Bis...]

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-09 14:55:17 UTC
From: awn <samuel.morse@nomail.cpod.fr>
Message-ID: <01c0c105$4c57e5c0$1d8127d4@pc1>
Source record: 6616

Hello,

73 from France.

Just a question : is there some countries where the respect of the "Gentlemen's Agreement" (Band plans, in particular) is an obligation by law ?

In France we have actually a problem : some SSB guys are doing phone contacts on 30m band (around 10.125 / 10.132 and 10.148) saying that the ART (as FCC) dont say it's an obligation to respect band plans. The ART says in fact that it's a good thing to respect the IARU recommandations ...

From now some months, 30 mtrs band is becomming a CB Band with regular chat phone QSO and QRM to perturb and perhaps some cb'ers coming on to excite peoples, hi ...

So, European hams, don't believe all french amateur stations are CB'ers ;-)

It's only some small groups.
As a french ham, i apologise for the trouble done by people who forget they get 30 m band by the work of the IARU and also that their QSL come by the IARU buro's !
They also forget they are doing trouble outside France.

Can we do something against that non-respect of the Gentlemen's agreement ? European IARU region 1 people, licensed with the CEPT/HAREC standard, can perhaps incite french administration to act for the respect of iaru recommandation ?

73,
F6AWN

to mail : remove the "no".

(sorry for my english. Hope you will understand what i wanted to explain.)

2313. Did they understand the question?

I know I can be slow sometimes, and it takes me awhile to understand some things.

Under the restructuring rules, a person who had EVER held a Novice or Tech Plus license (no matter how long expired) is given credit for 5WPM when applying for a new license.

But a person who has previously held a General, Advance, or Extra license in the past is NOT given that credit.

The ARRL petitioned the FCC to correct that obvious discrimination. The petition was denied, and the reason for denial is quoted below.

I have read the paragraph at least a dozen times, and it still doesn't "click" with me.

73, Hans, K0HB

---

17. We disagree with ARRL's claim that this rule discriminates between examinees who hold expired and non-renewable Novice and Technician Class operator licenses and examinees who hold expired and non-renewable General, Advanced, or Amateur Extra Class operator licenses. An examinee who holds an

expired and non-renewable Novice Class operator license, or an expired Technician Class operator license, may also hold a current Technician Class

operator license and therefore, must be given examination element credit for

examination elements passed for the license(s) held. An examinee who has only a non-renewable General, Advanced, or Amateur Extra Class operator license is not a licensee and, therefore, will have to pass or receive credit for the requisite examinations if he or she later decides to obtain another amateur operator license.

> licenses as Technician.

Yes, but according to the FCC's MO&O of April 6 (paragraph 9):

"Subsequent to the release of the Report and Order, the software used in
the ULS was modified so that ULS will show a 'P' (for Plus) in the field
designated for a licensee's former class of license when a Technician
Plus Class license is renewed."

So, one should be able to make the numbers more concrete if one wishes.
As of the latest public files, there were 7079 active 'T' class licenses
with 'P' in the previous-operator-class field.

In the context of the MO&O, the FCC overlooked the fact that that's of
little use since, as Jim says:

> Also, a ham who holds a Technician license and has
> passed Element 1 (5 wpm code) has Novice/Tech Plus HF privileges, even though
> the database simply shows "Technician" as the license class. There is no easy
> way to determine exactly how many Techs are actually Techs with HF, because the
> FCC does not keep that information in its database.

But even an expired Extra issued before 4/15/2000 is valid for the
commercial radiotelegraphy license requirement. So an expired Amateur
Extra conveys nothing in the Amateur Service but DOES in commercial
service. Somebody 'splain that one, please!

>How much is the
>League worth right now?

I'd say a tornado going by 225 Main Street in Newington should be able to make at least $950,000 worth of improvements *minimum*.

A lawsuit would be a very good thing for the ARRL at this time. It would reveal to the Board of Directors what they should be focused on and not the things they have been focused on of late. If you did sue them you might not even have to go all the way to court. You could drop the lawsuit if the League Board of Directors would admit and agree that:

1.) Restructuring was a mistake. Ham radio is dumbed down now.

2.) Restructuring isn't producing knowledgable operators.

3.) They were wrong in proposing their restructuring proposal.

4.) That their restructuring plan was only meant to increase membership not improve ham radio.

5.) Their restructuring plan ignored the wishes of the membership.

6.) They made a mistake in not opposing the FCC restructuring plan.

7.) That they agree ham bands are now worse since April 15th 2000.

8.) That they will work to promote better licensing standards and exams.

9.) That they will stop acting like bunch blithering idiots.

10.) That they'll listen to their members and not ignore them.

If the League would agree to these I might even rejoin and start supporting them again.

I follow the logic - if there is a mis-type in the section
dealing with expired/non-renewable Technician Class licenses.

My gut feeling is that they meant to say that credit is being
given only for current or expired-but-renewable licenses, and
that the holder of an expired-not-renewable Novice license may
somehow hold a valid or expired-but-renewable Tech license,
thereby conveying 5 wpm credit.

Is clear English so hard to write nowadays? The Commish' (or
more accurately Johnny "Bald Eagle" Johnson) was burned
severely by the attempt 25 years ago to rewrite the amateur
rules in comic-book language (remember that one?) so he gave up
entirely.

For months now a group of do-gooders have been invading rec.radio.cb and trying
to discredit freebanders and other alternative cbers by posting trivial legalities
and FCC rules. We who are serious about the CB hobby are sick and tired of
this flak. We know what we do is illegal. We simply don't care. Furthermore,
we have the right to do what we want WITHOUT anyone acting all high and mighty
and telling us we are breaking "laws". There are differences between rules
and laws. The FCC does not care about CB anymore and these do-gooders need
to get this fact through their thick skulls. I am not saying exactly what
action to take heh heh, but if you support our cause please do your part
to stop this malicious muckraking and disrespect of our hobby.

law?

In the US, band plans and gentlemen's agreements do not carry the force of regulation or law. However, cases of continued disruptive behaviour in conflict with these accepted plans have been dealt with under rules with deal with "Operation Standards" and "good amateur practice" as quoted below.

73, Hans, K0HB

----------FCC RULES QUOTED----------

Subpart B--Station Operation Standards

§97.101 General standards.
(a) In all respects not specifically covered by FCC Rules each amateur station must be operated in accordance with good engineering and good amateur practice.

(b) Each station licensee and each control operator must cooperate in selecting transmitting channels and in making the most effective use of the amateur service frequencies. No frequency will be assigned for the exclusive use of any station.

(c) At all times and on all frequencies, each control operator must give priority to stations providing emergency communications, except to stations transmitting communications for training drills and tests in RACES.

(d) No amateur operator shall willfully or maliciously interfere with or cause interference to any radio communication or signal.

You already kno why it isn't true. A former freebander who grabbed a
cheap and all-too-easy ham license while retaining his freebanding ways
for his usual forays outside the ham bands hasn't contributed anything
positive to the ARS.
Now tell us that rulebreakers outside the ham bands will be model
citizens inside them.

That's freakin' fact Dick. My take is that whenever the FCC decides
it's time to futz with the ham regs again they'll expect to the ARRL
to come up with some politically palatable (read: marginally
defensible) "consensus", pass cursory judgement on it and forthwith
twist the resulting R&O into something even more convenient for them.
In retrospect that's exactly what happened in this last maneuver. All
the flood of comments they got on that abominable NPRM did was to
demonstrate that we don't have our collective shit together. Which of
course gave them a ticket to ride.

Based on the original newsgroup post, you can not sue the ARRL. If you not a member, you can not sue them, because you have no standing. If you member, you can not sue because you are required to sue, in the name of organization, those directors that violated there fiduciary duty. See below.

Well you are live proof, but I do not think we can blame the ARRL directors for your stupidity.

> 2.) Restructuring isn't producing knowledgable operators.

Tell that to the 30,000 operators that upgraded.

> 3.) They were wrong in proposing their restructuring proposal.

The FCC proposed the Restructuring as a part of their Biannual review. The ARRL just filed a comment likre the rest of us.

> 4.) That their restructuring plan was only meant to increase membership
> not improve ham radio.

Does seem to be working.

> 5.) Their restructuring plan ignored the wishes of the membership.

Yep, they did not make the procoder or nocoder happy. Can not win them all.

> 6.) They made a mistake in not opposing the FCC restructuring plan.

Yes, that should have demand an immediate end to Morse code exams.

> 7.) That they agree ham bands are now worse since April 15th 2000.

Sun spots Vince, wait it will improve.

> 8.) That they will work to promote better licensing standards and exams.

That has always been their goal.

> 9.) That they will stop acting like bunch blithering idiots.

Right Vince and you model of blithing intelligence.

> 10.) That they'll listen to their members and not ignore them.

I might be nice if you would listner to what they have been trying to tell
for last couple of years. The code test can not longer be supported and
subsidized by the government.

No, but they are still responsible for it being properly done and
certified. Even when someone else does the work, it's still a pain and
it still sucks up resources. I can't think of a single government
agency chief who thinks that it's properly funded for the workload.

Well Michael let me ask you some simple questions. What is more important to YOU? The personal achievement of passing the above battery of exams? Or is the little square of paper from the FCC that you want to wave under other people's noses to show how much better you are compared to them?

Nothing you accomplished, nor the skill you used to do it, changed one tiny bit when the licensing requirements changed. You can still send code at your 20 wpm speed. You still know what you did to pass the written exams. So what's your problem? Worried about your "status" as represented by that little bit of paper from the FCC? Forget it, get on the bands, and have fun. It that not why you passed those exams in the first place?

The only reason that he likes the present is that it gives him something
to whine about. He thinks that if he does it enough, all the real
comunicators who know his true value will suddenly take him in as a
"real Extra," just because he was able to do 20 WPM and remember enough
of the answers from the Bash book.

Cecil:

First you disagree with me, then you prove my point. You really need
to get together with a psychologist.

>Any citizen who meets the
>requirements, whatever they happen to be at the time, is qualified
>by definition.

Not exactly. Post April 2000 radio amateurs with a General or Extra
class license are NOT as qualified as Pre- April 2000 hams of General,
Advanced, or Extra class. End of story.

>One person may already be qualified. Another person
>may have to study/practice for a year. They both get the same license.
>Dedication is irrelevant. Effort is irrelevant.

The "effort" is irrelevant only to those who never made it.

>In the past, it was very difficult to qualify for a concealed weapons permit
>in Texas. Then Bush signed the concealed carry law and now it is relatively
>easy for a citizen of Texas to qualify for concealed carry. If you were
>one of the earlier concealed weapons carriers, would you feel disappointed
>that there are now lots more concealed weapons carriers? Qualifications

Another Cecil Moore classic apples-to-oranges comparison. Also not
worthy of any further comment.

>Incidentally, the murder rate in Texas has dropped 45% since Bush signed
>the concealed carry law.

Good. If I ever feel in danger of being murdered, I'll move to Texas, and
be safe.

Phil and the group:

We all know that the FCC never reads or even cares about the comments they solicit in NPRM's. The whole deal is a sham from start to finish. Memorable shams include the theft of the 220 MHz band, which garnered something like 20,000 comments against, but only two in favor...one from the proposed user, United Parcel Service, and the other from the equipment manufacturer, Motorola. Of course it was passed, since the decision was cast in stone even before the NPRM was issued. Another was the LPFM scam, but I'll save that for another thread!

The radials are elevated at about 20ft and there are presently four of
them 34ft long. I plan to add radials while taking FS measurements
until I get to an optimum level.

> You live a charmed life, Cecil. The classic "snake in the grass". Glad it was

Exactly what rules do you think they would break? They have their choice
of modes, frequencies, and power. It is analogous to someone driving
without a driver's license for awhile and then getting a license.

We all know you have to delude yourself into believing that to
prop up your self-esteem, Larry, but the truth is all people holding
the same license class are equally qualified for that license class.
If they were not qualified, they wouldn't hold the license. The best
thing you can say is that you are over qualified for your license
class. That is as it should be for someone licensed as long as you.

> The "effort" is irrelevant only to those who never made it.

My Advanced exam was absolutely effortless. I stumbled in drunk and
stumbled out an Advanced ham. The only effort I expended toward my
Extra license was driving through a thunderstorm.

Of course it is. The R&O was the result of more convenience and easing
things for the FCC than for improving the ARS.

> How can you like a present that is screwed up?

I'm supposed to just withdraw from life because I don't like some
bureacratic decisions? You can do that, as so many codehaters have if
you wish. Not me.

I am presently an Extra.
> I know you don't like that.

You're just a grain of sand in the sea. So long as you refrain from the
freeband I don't concern myself with you.

My gut feeling, after the first release of the restructuring NPRM, was
that there exists at the staff level of the Comish essentially no one
who knows what the hell ham radio even is. That evidently would include
the "one and only licensed ham" working there. The rewrite they released
did almost nothing to reverse the impression.
The latest missive only serves to reinforce that feeling.

Hope you have a lot of wire, Cecil.

For a long time I had a quarter wave 20 meter vertical with the base 12 feet off the ground. Six quarter-wave radials. Worked really well - but it was no better on 20 than my 80/40 trap inverted V with the center at 35 feet and the ends at 12 feet. In ANY direction.

With lotsa radials, the picture may be different.

Nope. I know lots of hams and some VEs, that's all. Plus I read the amateur radio news of that time.

>>No, that's NOT what I wrote. And it's NOT correct. You are ignoring the
>>effect of upgrades. Why?
>
>I'm NOT ignoring "upgrades." They aren't included in what I am
>saying because of a lack of definitive, quantitative data on the
>number of "upgrades," who went from one class to another class.

The license totals are affected by uogrades even if they are not separately tabulated in the AH0A data. You are ignoring that fact.
>
>If Miccolis wants to argue about the NUMBER of "upgrades," he
>needs a quantitative value of that NUMBER that is available for
>reference by anyone.

If Len Anderson wants to ignore the presence and effect of "upgrades," he needs a quantitative value of that NUMBER that is available for reference by anyone.

>Any other argument about "upgrade"
>numbers is mere subjective opinion and not factual.

The existence of such upgrades and their effect on the totals IS factual.

SO? The effect is still there.

Can you PROVE that ALL pre-April-15-2000 applications had been processed by
June 1, 2000?
>
>>>You are attempting discrediting by a false statement of omission.
>>
>>No. I am pointing out your errors, Len.
>
>All that Miccolis has said is that "I made errors."

No. I have said that Len Anderson has made errors. Mistakes. Statements that
are not true representations of the facts.

>Were those "errors"
>arithmetic?

Maybe - I don't check all of your calculations. Maybe I should.

>Were those "errors" from using the "wrong" data?

Yes - and from misinterpreting what it means.

>The
>discussion on "Restructuring - did it make a difference" started out on
>the effects of US amateur radio license class privileges FOLLOWING
>the restructuring date.

Your errors are mostly ones of faulty logic and faulty processing of data. The
quantitative doesn't matter if the qualitative is faulty.

Here are some examples of your errors, Len. All of the following statements in
quotes were posted by you in the past few days in this thread. All of them are
not correct. Do you want to retract or correct them? Or do you insist they are
all vaild statements of fact?

(begin quotes)

"For Technician-Plus license class the renewals can only be between 10 and 8
1/3 percent of all Technician-Plus licensees."

"For the Technician class licensee, the number of renewals will be small
compared to all other classes because their initial
numbers were small."

"There is a more sure to determine the number of Technician-Plus renewals that
were made Technician or to separate the

originally-Technician-Plus from Techician by going to the NEW license, RENEWED, and RENEWED WITHIN GRACE
PERIOD tabulations. Since there are no new Technician-Plus license class grants, one can simply subtract the new
Technician license number from the Technician class total to see the number of Technician-Plus renewals transferred to
Technician class."

"In the 10-month period the number of total Extra-Advanced-General-TechPlus-Novice licensees DECLINED by 10,943
while the Technician INCREASED by 16,029. The net gain was 5,086. It is still growth. Of the Technician class increase
15,970 were new licensees exclusive of any TechPlus renewal reclassification. That leaves the Technician class total change
"off" by only 59 "others," presumably from the TechPlus renewal reclassification."

"Those 15,970 new Technicians still don't have any HF access with/without CSCEs."

"In the period between the end of June 2000 and end of March 2001 there was a difference of 59 between the NEW licenses
(exclusive of renewals or other changes) and the change of Technician class license totals over the same period. I never
discounted anything."

(end quotes)
>
>>The only "bad form" is your denial of the obvious.
>
>Which time frame is Miccolis using? Two of us in this thread were
>discussing the POST-restructuring effects. That period cannot be
>made valid by including data prior to the restructuring date.

I'm not talking about time frames. I'm talking about your logical errors. See above.
>
>>No, yiu haven't. But from the renewal rates, it's clear that the death of
>>hams is the main cause of attrition.
>>
>>>Quit lying.
>>>
>>Did I write that you wished for hams to die? No. I asked a question. If the
>>answer is "no", all you have to do is say so.
>
>Upset?

Not me. You obviously are, though.

>Miccolis made a loaded statement and it went off in his
>face.

What "loaded statement"?? I simply asked if you wish for hams to die. What's the big deal about answering that question?

What "lie" have I written? I just asked a simple question. If the honest answer is "no", what's the problem?

> Wounds are not healed by trying to shift blame.

Then why are you trying to blame me for something I have not done? You tell me to "quit lying" and talk about "loaded statements" when all I did was ask a simple question.

>>>The code-tested classes are, as a total, reducing
>>>in numbers...by dropping out one way or another.
>>
>>And the most common reason is....?
>
>...whatever someone wants it to be, subjectively. There is NO
>reference point for the reasons behind dropping out. I gave NO
>opinion on reasons for dropping out.

Nobody said you did. It is common knowledge that the death of hams is a primary reason for nonrenewal and cancellation of licenses.
>
>Why do you continue to imply "wrongness" by manufacturing
>conditions which did not exist?

I have no idea what that is supposed to mean.
>
>>In other words, I've pointed out that Emperor Anderson has no logical
>>clothes.
>
>...only because Miccolis has tailored his response.

Nonsense. You can answer the question. But I notice that you don't answer questions here.

> [he made
>the pants too long...with no buttons...]
>
Nope.

>I used publicly-available data over a time-period that is logical,
>the FCC's processing time included, on post-restructuring.

Your time period is based on subjective speculation of the FCC's processing time.

> My
>only subjective opinion statement was on the TREND of future
>US amateur radio licensing and license classes.

Nobody denies the trend.
>
>>Try reading and understanding Part 97 and the explanations on the Speroni

>>site.
>>Your denial of the obvious is boring, Len/
>
>The reading and understanding has been done here some while
>ago.

Your understanding is still faulty.

> Miccolis should try to employ some logic to his own
>statements rather than a lot of subjective (and imperious) remarks.

Emperor Anderson has spoken.
>
>The only BORING part of this is attempting to establish conditions
>and time-frames which have been WRONGLY applied by another.

Nope. The use of any timeframe in a nonvalid process yields nonvalid data. You use nonvalid processes - bad logic - mistakes - errors - call 'em what you will.

You can call me names but that won't make your faulty logic any more valid.

>
>So, one should be able to make the numbers more concrete if one wishes.
>As of the latest public files, there were 7079 active 'T' class licenses
>with 'P' in the previous-operator-class field.

Thanks, Jon! I saw the MO&O, but I wasn't sure how it would apply to those already renewed.

This means that of the date you looked there were at least 7079 "Technicians" who are renewed Tech Pluses. And they have Novice HF privileges.

In addition to the above, an exiting Novice who passes Element 2 (Tech written) upgrades to Technician, but does not lose Novice HF privileges.

>In the context of the MO&O, the FCC overlooked the fact that that's of
>little use since, as Jim says:
>
>> Also, a ham who holds a Technician license and has
>> passed Element 1 (5 wpm code) has Novice/Tech Plus HF privileges, even
>though
>> the database simply shows "Technician" as the license class. There is no
>easy
>> way to determine exactly how many Techs are actually Techs with HF, because
>the
>> FCC does not keep that information in its database.

Yup. So the database number represents a worst-case minimum number.

To make the situation even stranger, consider the following:

- An individual who held a Novice class license at any time in the past (and can prove it) gets credit for Element 1 (5 wpm), even if the license has long expired, and/or if the licensee subsequently upgraded. However, holders of

other license classes who let their licenses expire beyond the grace period get no such credit. The only rationale I can think of for this ruling is the fact that for the first ~23 years of its existence, the Novice was nonrenewable and "nonretakeable".
>
- A "Tech with HF" (Tech with Element 1 CSCE) has Novice HF privileges as long as he/she keeps the license current. But the CSCE is only valid for upgrade credit for 365 days after it is issued. After that, the holder must pass Element 1 again to upgrade to General or Extra.

Thanks again for the info.

l. You got caught spoofing, live with it.

2. The discussion in question is whether to recommend a Tech ticket to a newbie -- given that the code requirement is going to be with us for some years. I would not, any more than I would lead him to an open elevator shaft. What Techs do is not of giant interest so long as it does not have an effect on me. Do not overestimate your importance in the giant scheme of things.

3. I will admit to confusion but I am my usual cynical-chic (thank you, Len) self overflowing with calmnity and dignitude. Most of the confusion comes from your spoofing.

FYI. Here is the sequence of events:

1. Twistedhed got tweaked unmercifully in rec.radio.cb
2. Twistedhed decided it was Leland doing the Tweaking
3. Twistedhed spread his belief all over the net.
4. Unfortunate saps like Richard believed Twistedhed

5. The real Tweakers admitted they had done the tweaking and not Leland
6. Twistedhed refuses to give up the idea it was all Leland's fault
7. The whole world is laughing at Twistedhed

>A lawsuit would be a very good thing for the ARRL at this time.

As if they haven't got enough to deal with, you'd add a frivolous law suit. One that would have NO chance of winning ANYTHING.

>You could drop the lawsuit if the League Board of Directors would admit and agree that:

>1.) Restructuring was a mistake. Ham radio is dumbed down now.

Restructuring was NOT a League initiative. It was an FCC initiative. Sue them. Better yet, find Dick Bash and his ilk and sue them. Thier "test gudes" are what "dumbed down" Amatuer Radio.

>2.) Restructuring isn't producing knowledgable operators.

We have not been doing that for at least 20 years...since we allowed the Carter-era cowards to allow "open pools"

>3.) They were wrong in proposing their restructuring proposal.

Again...the FCC, not the League, initiated Restructuring. The FCC's final draft was not what the league proposed.

>4.) That their restructuring plan was only meant to increase membership not improve ham >radio.

How? This is a ludicrous statement. And in any case, MORE Hams would mean (ultimately) more League members. The former does not follow without the latter.

>5.) Their restructuring plan ignored the wishes of the membership.

How? In what definitive poll have you come to this conclusion? YOU are upset therefore ALL ARRL members were ignored?

>6.) They made a mistake in not opposing the FCC restructuring plan.

The FCC did not initially have a "plan". Thier final draft was the work of post-comment planning. The specified topics on which they wanted comment, but had no "plan".

>7.) That they agree ham bands are now worse since April 15th 2000.

Any "worsening" of the Ham bands is NOT coming from Amateurs. It's coming from unlicensed truck drivers and hobbyists on the bottom end of 10 meters.

Any other "admission" would be a lie. The "bands" have not changed one iota since 15 April 2000. There has been no major flood of new callsigns on the air, bandplan "violations", etc etc.

>8.) That they will work to promote better licensing standards and exams.

They are already doing that. That they are the largest retailer of licensing materials and the largest VEC is evidence of that.

>9.) That they will stop acting like bunch blithering idiots

I hope they sue YOU for that remark. They won't, since they have a bit more class than that, but they could. And you'd deserve it.

>10.) That they'll listen to their members and not ignore them.

If they ignored them as you assert they do, they wouldn't be "in business" very long. It IS a membership organization and not everyone is going to be pleased all the time.

>If the League would agree to these I might even rejoin and start supporting them again.

I am sure they will rush right out and immediately stop everything they are doing and kowtow to YOUR ideas to get YOUR dues.....yeah...right.

Again...it's a "membership organization"...More than one person has an opinion on how things should be run. Some of those opinions are probably contrary to yours, but are nonetheless just as valid.

If you want it "Your Way, Right Away", stop at the drive through at Burger King, Vince. They will be glad to take your order.....

Hey Vince.. restructuring is a fact. Get over it.

A multiple choice 20 WPM Morse code test doesn't teach anyone much.
It's no loss.

Actually, it is one of the fastest growing hobbies that
radio enthusiasts are discovering. Boats respond to your
calls quickly and it is possible to make many new friends.

AES and Radio Shack sell some really affordable marine
radios too. Judging from the growing number of people coming
into this new hobby, there are probably thousands already
having fun on the marine bands.

Listen for "Robbie 782, the juggler."

Great hobby! Pleasure boats haven't used call signs in years. They use
the name of their boat as a call sign. I recommend the UNIDEN MC-1010
from AES or other outlets. It's $129 and your're on the marine band
having fun talking to pleasure boats around the world. Add a linear if
you want. Make up a name of a boat, like Lilly B, or Sally J, and
you are on the air. I talked to a guy last night near Tahiti from
here at my home in Oklahoma City. A guy in Radio Shack told me they're
selling dozens of marine radios a week to radio hobbyists. He said it's
the latest thing in radio fun.

Any such radio operation would be a federal offense with potentially
serious consequences. The only way you can legally operate two-way HF
radios for recreational purposes is via the Citizens Radio Service (no
license required) or the Amateur Radio Service (ham license required).

Steven,

IF I read FCC's logic in this refusal, it seems that their refusal is based on the fact that IF a person held a General, Advanced, or Extra ticket in the past, then at some point PRIOR, that same person held a Novice ticket, right? So, to their thinking, there is nothing to correct. That is....if I see this issue correctly. The point is only 5WPM. So that person passed that to get a Novice ticket. If I am wrong, please correct.

Hello All,

Here we have the perfect example of why some people thrive in the domain of the Internet but are essentially social outcasts no matter what thier socioeconomic background.

I received this via private e mail. Of course this cretin cannot successfully argue thier point in a public forum. No matter how you look at it, it really is a "no win" situation. There are now and shall continue to be, for the forseeable future, an application for Morse Code. It's a fact. Some commercial ships still use it, the Armed Forces of most countries still teach it, and of course it is still the "least common denominator" of Amatuer Radio.

Not to mention this "post" came from comments made some time ago...NOT April 10th as quoted and NOT in context, therefore, as ususal, hardly timely nor applicable.

Does it need to be a mandatory requirement for Amatuer licensure? Probably not. But the United States is NOT the only natioon in the world with a say in this matter, and even when we do get to voice our opinion, it still only counts ONE vote like any other soverign nation of the world.

I think we can safely narrow the field down to about four people who generated this letter. My first guess is of course Leonard H. Anderson. He has already demonstrated that his "position" is indefensible, and he must resort to profanity and the "help" of "anonymous" friends to make the point. Furthermore, it follows the pattern. "W2DNE's" posts always follow a "lull" in Lennie-isms.

My second choice is Hans Brakob. "W2DNE" usually posts in response to comments made by, for or in deference to Hans or Lennie. Not always, but often enough to have made a pattern obvious.

In either or any case, it matters not. Anyone who cannot put their name to thier comments in a public forum is probably having sex with a deceased parent or underaged neighbor, and their reward shall come soon enough.

Not that AOL will do anything about it, but the letter was TOS'ed, and the rest is on it's way to the trashcan with the rest of the refuse.

Steve, K4YZ

There is no country, 3rd world or otherwise, which has any use for Morse Code telecommunications infrastructure. Technology is the cheapest thing in the world these days, and Morse ain't gonna cut it.

You're a dumb sumabitch, and you're really good at it!

What does that statement have to do with the topic? People who operate
without a license (for an operation requiring a license) are breaking
the rules. After they get the license they are no longer breaking the rules.

Well, my dipole is not an inv-V and it is one wavelength on 40m. That is
supposed to leave some severe holes in the radiation pattern. I'm hoping
that the vertical will be better than the dipole in some direction at
some distance.

> oh mama. Hope it wasn't your sendin'/shootin' hand.

Actually, it is right where the grip safety fits on my Colt-45.

How do they know what the bulk of their membership thinks? I'll bet
90% of ARRL members have never let their thoughts be known to the BOD.
With so few members who ever actually make their thoughts known to
the BOD, the BOD can rationalize almost any philosophy.

Well my shack includes my ts570s, ts-440sat, crappy little htx242 for packet (along with a AEA PK-88 I bought at a ham fest out here), my ic-821 for satelitte. A mast mounted preamp from DEM for 440, a homebrew 12.2m parabolic and homebrew az, el rotor for it. I have 2 phased 13-b2's on my 30' mast with a cheesy little radio shack tv antenna rotor I found in the garage when we moved in. My computer is a AMD k7 1200MHz on an ASUS a7-v motherboard. 768mb ram, 42gb of hd space, a guillemot 5.1 sound card, a wintv theatre pro card, 19" flat screen lcd monitor and cable modem connection to the net via the @home network. My mobile station includes a ic-706 (fun toy), tecra 8100 (from toshiba if yare looking it up) laptop, athlon k7 500Mhz in the trunk (for my mp3's and dvd).

So before you denounce this job I have ... I would consider just where you stand first.

Maybe he should get negative commissions. I am less likely to buy a
W9INN antenna now that he's advertising them.

73, doug

who does need a restricted space 160M antenna that will also do 80M.

Actually Security Officer St.Denis EYE EYE was correct. I equate your
little security position to the guys sitting outside the local NYC Grren
grocers making sure no one rips off the mangos.

They stand there with their shiny tin badges and official MagLights and
go EYE EYE, you no touch da fruit hokay??? EYE EYE, youse need to pay
fo dat fruit hokay???

ANd I never said anything about the military now did EYE Security
Officer St.Denis?? Tsk tsk. canuck education can't read, can't
comprehend. BTW, isn't AYE AYE a naval term? Did Canada have a navy??
Must have had many major sea battles on the Great Lakes wow

And I don;t drink any of the Canuck crud, so you're right, I wouldn't
know how to spell Molson, as if it really mattered.

Security Officer St.Denis..report to Aisle 5. Possible
shoplifter.....bring your can of Dr Pepper spray.

Not bad. My computer is a 486 33 with 48meg of ram and 2 430meg hard
drives. Runs the 1000d and control the hamIV rotor. Runs DX4WIN,
Pakterm99 and CT. Have an Aplha 89 that I picked up used, and is rarely
used since the tower sits 20' of LI Sound and the salt water, although
killer on the equipment makes for a excellent ground.

>
> So before you denounce this job I have ... I would consider just where you

I stand 6'3 in my stocking feet. I was a corporate pilot flying out of
McArthur or MacArthur Airport (spelling varies according to different map
makers). I retired just last year at 55.

ANd I usually stand first when I stand

So a snappy salute to you Security Officer St.Denis and a mighty EYE EYE.
Don;t take any rotten fruit.

Aye Aye is a naval term ... and yes Canada does have a navy, although we have evolved to the point where defence is irrelevant (notice noone comes and bombs our harbours, office building etc) because we aren't savages who's only way of getting respect is to shoot, bomb, pilige or rape it out of them.

My job is strictly to get some pocket money while I'm in school since a full time employment would be impossible. Since I am training to become a police officer a security officer's job seemed right to me. Occasionally we do do static security, but a majority of our services comes from patroling neighbourhoods who hire us to do so.

When we do static security, the most part of our work is just checking on the building (i.e. alarms, and thefts ... sure its dull but someone needs to do it)

As for the beer comment, quite frankly alcohol is of no use to me. I am not a weak willed inDUHvidual (sorry S.A. for using your term but it fits) such as yourself who requires alcohol to dull his senses and escape reality.

And my pepper spray is 10% o/c. My baton isn't plastic its a 21" asp expandable baton. I don't carry a badge, no need to. That is typical american clout, after all a pfc should have a chest full of awards eh?

Gee I bet you are damn proud of those plastic propellers you had on that 100$ suit you wore day in day out flying people around in your fancy taxi there bub ... any idiot with 35k can get a commercial pilots licence. Heck, since you believe I'm such a boob, I got my ppl with IFR, MER, NFR's when I was 18 ...

I got a degree in physics at Ottawa U after transferring there from Windsor U. I worked as a telecommunications technician for a short time (until I realised how boring it was to sit at a desk doing meaningless work in telecomms). I decided in january that forensics would be more interesting and a very adequate use of my physics knowledge. To do so I need to become a police officer first. So here I am, in school again and working as an officer.

So again before you insult other people, mister plastic wings wearing cab driver guy, I'd consider where you stand in relation first.

> June 1, 2000?

Actually, that introduces another problem:

Some post-April-14-2000 applications were processed by April 19, 2000.

That's why I have gone with an April 18, 2000 date as the only authoritative date to cut off the FCC database at for purposes of comparison. Also, some groups had regular, full-blown, NOT upgrade-only sessions on April 15, 2000 because that fell on their REGULAR session day for that month. If you choose a later date, you will miss some upgrade actions....

Source record: 6776

I think everyone is reading more into it, and the ARRL is not thinking straigh on this.

The "credit" is given to those that have a CURRENT license, not an expired one. If someone once had a conditional, general, or advanced license and they kept current then they would not need this credit because they would still be a general, advanced, or whatever. I don't think the credit should be given to anyone who has let anything higher than a novice or tech plus license expire. I think the ARRL is confused on this one, in thinking it discriminates anyone. The only people this affects are those that for some reason let their licenses expire. I personally don't see any logic in the ARRL's thinking on this. Some person walks into a VE session and says "I used to be a general, but I let my license expire 13 years ago, can I get credit for the 5 wpm test?" The FCC is correct on this one, the answer should be no.

> Order."

I follow the logic - if there is a mis-type in the section dealing with expired/non-renewable Technician Class licenses.

My gut feeling is that they meant to say that credit is being given only for current or expired-but-renewable licenses, and that the holder of an expired-not-renewable Novice license may somehow hold a valid or expired-but-renewable Tech license, thereby conveying 5 wpm credit.

Is clear English so hard to write nowadays? The Commish' (or more accurately Johnny "Bald Eagle" Johnson) was burned

severely by the attempt 25 years ago to rewrite the amateur rules in comic-book language (remember that one?) so he gave up entirely.

Well it sure beats being an overweight overpaid taxi driver in the skies.
And it sure beats the alternative I have while in school, being a cashier or
who knows what.

We pretty much all carry them ... especially when you have to deal with some
drunk who is being an ass ... couple quick snaps make him no longer a

problem. And who cares about the price. I get it here for $45 canadian ..
thats about $30us (since I can assume you can't multiply)

when someone is wearing a uniform and comes out of a car marked "securworks"
for the most part people around here can put 2 and 2 together and determine
we are security. So why wear a badge?

I doubt that spitting on the sidewalk would get you that punishment there either, stuff like that, or failing to flush a public toilet, or improperly disposing of your chewing gum, merits a fine at best. The famous caning was for graffiti on a public building, and I doubt if it was for the first offense at that. Of course all of this does make Singapore a rather pleasant, unscary, place to visit (if you are into places that remind one of suburban malls), with little danger that you'll get gum stuck to the bottom of your shoe. The regulations should be of little consequence to a visitor since it is always prudent to be on your very best behaviour when in other peoples' countries in any case.

In Thailand (which I like a lot) I doubt spitting on the sidewalk is illegal, in fact many things appear to be legal, or at least common, in Thailand which are illegal here except for maybe Nevada. I'm not sure about that, however, since it is always prudent to be on your very best behaviour when in other peoples' countries in any case.

It's a living and I got to travel and I got personal use of some mighty
fine machinery. Nothing like flying out to see Ohio State play in the
Rose Bowl and going in your own plane.

... any idiot with 35k can get a commercial pilots licence. Heck,
> since you believe I'm such a boob, I got my ppl with IFR, MER, NFR's when I
> was 18 ...

Oh really?? Funny how it wasn't listed on your website (P.S. you're
right, it does suck) All I found was this

Designing Radio Contreolled Aircraft

note the spelling of the words here....Canuck education at its finest.

As to any idiot..you got me. First I had to have the money and then the
training and then the flight time. AND THEN someone had to hire me, so
Mr. I am looking for employment in the security and protection field,
guess you won't be hitting a other planes in the near future. I am sure
the Royal Canadian Air Force is breathing easier.

>
> I got a degree in physics at Ottawa U after transferring there from Windsor
> U.

Wow!!!! A Physics degree in just 2 years and yet you want to be a COP??

Was that A BeeESS in Physics from the BillNye School of Mr Wizardry??
Wanna create some atom bombs?? Maybe we can put together some nuclear
subs out of pipe cleaners?

Funny, if you look up the work physic..you'll see it also refers to an
enema, which you must be in need of as you are so full of merde (shit to
those who don;t speak French)

I worked as a telecommunications technician for a short time (until I
> realised how boring it was to sit at a desk doing meaningless work in
> telecomms). I decided in january that forensics would be more interesting
> and a very adequate use of my physics knowledge. To do so I need to become

AYE AYE Officer Tackleberry. Maybe you and Lt Nordberg can work the waterfronts of Toronto.

>
> So again before you insult other people, mister plastic wings wearing cab
> driver guy, I'd consider where you stand in relation first.

Lemme see. Driving around in a Yugo with a revolving yellow light on the roof in some rich neighborhoods playing rent a cop at $5.50US an hour or flying some rich people around in multimillion dollar planes, both prop and jet, getting major bucks, getting lots of time off..remember, I'm on call but that doesn't mean I fly all the time, so I get paid if I'm in the air or not. I get personal use of a 10 passenger turbo at least once a month AND THEY PAY ALL. In addition, there maintenance crew looks after my "lowly" Cherokee Twin and all I pay is insurance and parking fees.

I get to retire at 55 and will get all the bennies (except the turbo) and will receive 85% off my final salary for life. HMMMM

Yep..go ahead tout that great rent a cop job. You stand tall girl. You hold those shoulders back, chest puffed out and remember

That's alright, that's OK
You'll be pumping gas someday

Please, no more..you're 1 upmanship is killing me.

Ta ta Security Officer St.Denis.....better answer that call coming in

"Dog crapping on lawn.....talk to owner's. Don;t forget you 10% Dr.Pepper spray and your inflatable plastic baton. Maybe your clown shoes and a funny red nose????>

HHHAAAAA you're killing me. No wonder...all the funny comedians come from Canada. It's a natural; thing

Personally I prefer to fly a Diamond Da-20 (katana) to any other aircraft
... oas out here rents em cheaper than a cesna 172

> Oh really?? Funny how it wasn't listed on your website (P.S. you're
> right, it does suck) All I found was this
> Designing Radio Contreolled Aircraft

The resume on the page is old ... not to mention it is not the one I use
when I go for a job ...

> As to any idiot..you got me. First I had to have the money and then the
> training and then the flight time. AND THEN someone had to hire me, so
> Mr. I am looking for employment in the security and protection field,
> guess you won't be hitting a other planes in the near future. I am sure
> the Royal Canadian Air Force is breathing easier.

ANY college will train someone to be a commercial pilot if they have the
cash ... ground school is a joke ... and flying a plane isn't the hardest
thing in the world neither.

As for the RCAF ... there isn't any here in Ottawa ...

> Wow!!!! A Physics degree in just 2 years and yet you want to be a COP??

That is the minimum amount of time required to get a degree (30 credits).
It's not honours ... but I wasn't interested in spending the extra year
doing it. And as for being a cop ... Physics will help a great deal in
forensics.

> Funny, if you look up the work physic..you'll see it also refers to an
> enema, which you must be in need of as you are so full of merde (shit to
> those who don;t speak French)

Spooky an american who realised that Canada's second language is french

> AYE AYE Officer Tackleberry. Maybe you and Lt Nordberg can work the
> waterfronts of Toronto.

You haven't the foggiest idea of how far Ottawa is from Toronto eh?

> Lemme see. Driving around in a Yugo with a revolving yellow light on the

> after my "lowly" Cherokee Twin and all I pay is insurance and parking
> fees.

Well the car is a lumina, the light bar is from code3 (same as what the
police use). And again this still beats the alternative ... Because for the
most part ... no ... all of it ... working retail or other such service is
horrid work ...

> I get to retire at 55 and will get all the bennies (except the turbo) and
> will receive 85% off my final salary for life. HMMMM

This job is temporary ... 2 yrs while I'm in school. After which time,
seeing as how I am studying as a recruit I will be hired on to what will be
a good career. And, I might add, not solely driven by the almighty buck
that you americans are so fond of.

> Yep..go ahead tout that great rent a cop job. You stand tall girl. You
> hold those shoulders back, chest puffed out and remember
>
> That's alright, that's OK
> You'll be pumping gas someday

Please, if all else fails there is always that degree on my wall to back me
up ...

> HHHAAAAA you're killing me. No wonder...all the funny comedians come
> from Canada. It's a natural; thing

There's a reason for that, americans are too busy "not" spying on any
country they deem necessary, getting their harbours bombed by an out of date
air force, having their federal buildings bombed by a crazy guy named tim,
having universities bombed by another loon from the middle of nowhere,
dealing crack to 10 year olds, beating your wives, and raping your kids.

ok here are one of his posts from rec.radio.cb, using the moniker of rec.radio.amatuer.policy, There are many of them, he complains of cbers ruining the band but yet he does the same and ruins a NG. Is this not hypocrytical. Perhaps Riley disapproves of this type of vigilantism. Is it an eye for an eye? Sounds like lots of inoccent people are affected.

2441. Re: Can we sue the ARRL? Yes we can.

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-10 23:27:09 UTC
From: David Reinhart <wa6ilt@bellatlantic.net>
Message-ID: <3AD396CE.5F685017@bellatlantic.net>
Source record: 6791
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

How many hams out there (including the ARRL BOD) have ever stopped to think just *why* less that 25% of the hams licensed by the FCC belong to the ARRL? The Aircraft Owners and Pilots Assocation (AOPA) is in many ways a similar organization. It's members tend to be older, male, and have a certain amount of technical savvy; both groups face regulatory, legal, and economic pressures to regulate or eliminate their activities. It can be argued that it is in fact harder to become a pilot than a ham because the FAA actually requires people to demonstrate that they can fly while the FCC doesn't require any demonstration that you know how to operate! Certainly learning how to fly and being an active pilot (unless Uncle picks up the tab) can easily cost more than being a ham (though some hams do spend more on radios, towers, etc., than some pilots do for airplanes).

Despite the fact that becoming and remaining an active pilot takes more money and effort than becoming a ham, AOPA boasts a membership of *over 50%* of the active pilots in the US.

Why? I wish the heck I knew. Since I belong to both organizations my feeling is that AOPA really *listens* to its members and what they want. My experiece with the ARRL over the last 24 years has been that the Board decides what's good for ham radio and the rest of us had better let them run things. Good grief, the Amateur's Code makes it quite plain that disagreeing with the League constitutes disloyalty to ham radio!

Why is the average age of hams going up? Well, the population as a whole is getting older. We Baby Boomers are the largest population co-hort in the history of the planet and we're getting older. The average age of pilots is going up, too, but AOPA isn't advocating that standards be lowered as a means of bringing in the younger crowd.

The president of the AOPA, Phil Boyer, has dozens of "town meetings"all over the country every year with AOPA members. He always has other members of the top staff along that people can talk to. The AOPA open house in Maryland draws thousands of people and over a thousand airplanes for a *one day event*. Yes, there are vendors with goodies and airplanes to look at, but there's also the chance to meet the people who run the show. The New England Division director didn't even make it to the AMSAT Symposium in Portland, Maine this year.

AOPA *gives away an airplane every year*! We're not talking junk, either. Every plane is either new or refurbished down to the last rivet and loaded with goodies. The latest one is going to be worth over $200,000. Just pay your dues and you have a chance. If you bring more people into aviation, you get more chances. How many hams might pay dues to the ARRL just to have the chance of winning a dream station? Even a *really* fancy ham station is going to cost a lot less than two hundred grand! Oh, and AOPA dues are only $35/year.

Maybe aviators are more passionate about flying than hams are about radio. Maybe they still feel that there's something special about what they do. Maybe the organization is more responsive to the membership. On this last point, AOPA has a *much* broader range of "certified services" than does the ARRL. Credit card rebates, aircraft loans, other banking products, some niche insurance products, car rental discounts, etc. But honestly I feel the biggest difference is that the management doesn't believe they are the font of all aviation wisdom and they *listen* to the people who pay the bills.

Check the cb NG His moniker is AntiKeyclown, twistietweaker, punisherof keyclowns, and many others he changes in an effort to evade Filters, majority of his postd are from mbix.net, or cotse all anon newsreaders but he forgets sometimes and psots from concentric. For double security he also uses Aol then goes to anon sites and posts. I give him credit he must be a wealthy man because he posts at least 500 messages a week .

While I hate to interrupt the endless argument you both love so both;
however
The above clips show a lack of logic. Just because an extra ham took
the exam after April 2000 says nothing at all about their qualification.
All it shows is what test they took. Neither of you have any idea
whether that ham barely made 5 WPM by guessing at the answers or could
sail along at 35 WPM+. Neither of you know if they passed with one
question to spare having memorized the question pool or could write a
textbook on radio communications.

Isn't it about time to bury this old rehash? I know I would rather
spend what little spare time I have on the air.
John

Probably 10 pounds could be lost..as to overpaid..YOU BET YOUR SWEET ASS
I WAS OVERPAID.

Leesssseeee

Salary...between 140 and 160k (annual and in US $$$, not that Canadian
crap you use to wipe spills up with)

Annual Retirement pension of 85% so for you of the Canadian educational
system that's between $114 and 136k annually..for not working. Plus I
still get it if I decide to go back to work. Ya know Mark..err Rob (wink
wink) I think a 2nd career as a Security Officer might be just the
thing. $7 bucks an hour. Get to wave a big baton (obviously to you a
great deal in light of your short comings..if you get my drift) Walk
around ordering people around...HEY YOU THERE..GET OFF THAT LAWN. LEAVE
THAT LAWN GNOME ALONE. Yes sir reybob..a Security officer that's for me.

Full health....maintained in my retirement for life

Full Maintenance on my personal plane. THAT'S FULL. That means annual
inspections...oil, tune ups, and engine rebuilds HHHMMMM last year that
came to $15kUS.

As of 2 years ago..plenty o'stock and this cosmetics company is making
money..

I guess I'll have to hide my shame at being an overpaid taxi flyguy

HA HA HA HA HA HA HA HA HA HA HA HA

Gee, in your country that gets YOU arrested for assault. YOU the
security officer have no legal rights like a policeman to assault anyone.
According to YOUR laws, you may detain till legitimate authorities
arrive. You may not use force. Guess you didn't read that in your
official Police Squad coloring book. ANd you call me a putz scheeesss

kids.

OH my...oh my the US has been insulted by a Canadian. Let's bomb the
shit out of them and steal the CN Tower.

I wish I had a copy of that recording done by a Canadian about the US.
It was back in the 70's I think.

I'd have it laminated at stuck on Mark...Rob's Expandable baton.

Poor Mark...doesn't realize that 70% of the Canadian economy is US
driven. If it weren't for US Rob, you'd be stuck as a French
possession..diddling the moose for you kicks.

Stay up North there dude...they need you more than we ever could. Canada
can't have enough rent a cops with honors degree in physics who dream of
being RCMP.

I never once said that the security thing is a good job ... it is simply
better than the alternative ... and even at 14.50 an hour ... its better
than the 26.09 I was getting on contracts ...

> Full health....maintained in my retirement for life

OHIP covers me ... and thats out of my taxes ...

> Full Maintenance on my personal plane. THAT'S FULL. That means annual
> inspections...oil, tune ups, and engine rebuilds HHHMMMM last year that
> came to $15kUS.

I rent ... much simpler around here. Especially since I don't fly too often
...

> As of 2 years ago..plenty o'stock and this cosmetics company is making
> money..
```

I jsut stick with the basics, acatel, nortel, mitel, cognos and cisco ... a wee bit in each just to play around ...

> I guess I'll have to hide my shame at being an overpaid taxi flyguy

Making money isn't everything ... just think that well ... when you retire you would have done nothing but cater to a bunch of rich guys ... you never helped a soul and all you did was feed your greed ... what a lovely person to be ...

> Lightening strikes are a hazard and we do have static eliminators
> trailing off the wings.

as I mentioned before ya most likely had to look it up

> what?? normal??? bright??? conscience? Human???

Be a drunken hill billy like 2/3's of the states

> Gee, in your country that gets YOU arrested for assault. YOU the

Actually if I beat someone with my baton it would be in self defence ... would be nice to use it on any vagrant but ahh well ... and just to let you know I have read the ccc .... all 810 pages of it ... I have the right to use force to stop someone from commiting an indictable offence as well as to use force to detain someone who I have witnessed commiting one

> Your privates are first class?? Then why even bother with a expanding
> baton?? Sorry...just too easy
>
> I think you are PFG pretty frigging gullible

right ....

you mean shriners ...

> I am sure you have all the people shaking and a quaking in their boots
> there Mark.

For the most part ... you dont need to do anything to get people to leave a property or detain them ... people up here simply know when they are caught ... unlike the drunken hill billies you see on COPS every week who have the dilusion they can get away

> HALT..IN THE NAME OF SECURWORKS.....STOP OR I'LL SLAP YOU WITH MY
> $45CDN..$30US EXPANABLE BATON
^^^^^^^^^^^^ expandable you yutz

I have yet to use it ... and again ... we dont need to threaten people to get them to do what we want them to

The FCC refers to such marine band "pirate station" as "kitchen
coastals" from the days when the usual such installation was in
the home of a commercial fishing vessel owner and used by
family to contact the vessel without benefit of license as a
Private Coast Station or the services of the various Marine
Operators (Public Cost Stations).

When the US Coast Guard or the commercial marine users (ATT and
Globe Wireless, for instance) feel that they've had enough
competition or complaints, they get the FCC to do "make an
example" sweeps.

Like catching fish in a barrel, BTW...

Look up the case of Arthur W. W. Brothers who set up two of his land-locked "clients" - two brothels in Nevada - with marine radios, got them licenses as the vessels "Sherry" and "Betty", and provided them with radiotelephone service through his Lake Powell Marine Operator.

When all the dust settled, he lost every FCC license that he had - his Marine Operator services (a printing press for money in those days) in several parts of the country, the licenses for all the Mobile Operator and link channels for the telephone company which he owned, the license for his private plane, his commercial operator license, and his ham radio license. In the process he wound up "donating" a goodly chunk of his cash to his lawyers.

Had he not been a licensee, he would have been hit with a hefty fine and possibly jail time in a criminal prosecution.

Nowadays the FCC can get you both ways - monetary penalties AND loss of license.

Oh, I forgot -- one of his Marine Operator stations was found installed at the top of Navajo Mountain without the necessary permit from the Navajo Nation. The equipment was seized by the Chief of the Tribal Police - in real life the Navajo Nation is part of the United States only when it wants to be part of the United States - converted to 2-meters, and has run for several decades as a 2-m repeater under the ham license of said chief.

> Leland lies and so does n8wwm.

The one who likes me so much that he forges posts in my name does. As far as N8WWM goes, you will have to ask him because I'm not a mind reader. On the other hand I do make an effort to keep my language clean, no potty mouth words from me. Then finally I don't have a problem putting my real name to what I write. I don't need to hide behind fake screen names like some do. I will continue to post my views, using my real name, and I don't really care if anybody agrees with them or not. These news groups are a public forum. So whatever agenda, and behind the scenes skullduggery, that is employed by the truly responsible party(s) will in no way alter my postings, nor the views they contain within.

Then again, if you sue and lose, the ARRL could file a countersuit because you filed a frivolous lawsuit. I wonder how much that would cost the individual filing the original suit and I wonder how much money they would have to pony up. One reaps what one sows.

> you would have done nothing but cater to a bunch of rich guys ... you never
> helped a soul and all you did was feed your greed ... what a lovely person
> to be ...

Nope, I feed my family. I put my children through school so that they'd
be able to start off life without huge debts. I bought a nice house here
in Eastern LI to raise them and then was able to buy a condo on Sanibel
Island so we'd have a nice place to relax in the summer. I have a small
house in Sherburne Center, VT on the slope of Killington Ski Resort.

As to catering to rich guys....I catered to the owners of a highly
successful cosmetics firm who preferred flying in private as opposed to
commercial cattle transport.

As to helping...I'd check out the Angels of Mercy website. I'm there
Rob. My company allowed me enough free time to do more than you'll ever
do in your pathetic little life in that regard. And even though I am
retired, the still sponsor my flights, which average 2 per
month..anywhere anytime, so fuck you very much.

Must suck being you knowing you'll amount to nothing living off the
Canadain governments teats. KNowing when you retire you'll have been
nothing more than a hired thug beating innocent people with your
expendable baton. BTW

this coming from someone who spells controlled as
C O N T R E O L L ED????

>
> I have yet to use it ... and again ... we dont need to threaten people to
> get them to do what we want them to
>

gee..another slap at the US. Better stay up in Ottawa where's there's no
crime...just little baton carrying security officers like you and Tasha
Yar on the Star Ship Enterprise

Royal Canadian Mounted Police starring Rob St.Denis as the horses ass.

You go girl See you in the friendly skies. Try not to hit the mountains
as you use your little GPS to get from one place to another.

How can you tell some pilot has been using a GPS to fly with???

The splatter he makes after crashing is in a direct line with his
departure and his destination.

Oh that's right..you am the pilots pilot.. ha ha ha

I gotta go now. I'm off to Florida for the Easter week. They serve a
great Sunday Brunch at the South Seas Plantation on Captiva Island.
Hopefully Ft Myers International won;t be too back up this time of week.
All those frigging Canadians flying into Florida. Must be a shame they
waste all that money that they earned..the greedy bastards

Take care Rob St.Denis SECURITY OFFICES driving the mighty SECUWORKS
Chevy Lumina with real action light bars.

You must be the Inspector Clouseau of the Province what a buffoon

You are MarK Morgan...aren't you?? If not you sure act like him. Tell
me...did you're wife beat you and did you run off and change your name to
keep her from finding you?? Bet ya did

Much later....if ever.

this was way too easy

Well considering people are selling ohip cards and other health cards at
5-6000 a pop to americans ...

I needed reconstructive surgery on my hand when I damaged a nerve. I had
exploratory surgery after a week and reconstructive another week after that
... not bad considering it was not an emergency

> If ever.

It's been a year and a bit ...

> As to helping...I'd check out the Angels of Mercy website. I'm there

I am in Red Cross ... I have ran shelters in several emergencies and
disasters in the time I have been with them ... Through some simple emt
training I learned skills that allowed me to save a total of three lives in
the passed two years ... After I got my "wings" I flew with the young eagles
to allow kids time in the sky (at my own expense) ... I have been a leader
with the scouts and an instructor with the cadets ...

> Must suck being you knowing you'll amount to nothing living off the

That's it all cops do is beat innocent people ... remember that the next
time you need one

> nope. knew that. And I wasn't an honours physics major.

well 12yr olds know about it ... you dont need a degree for it ...

> As opposed to 80% of Ontario Provenice??

its province ...

> Nice try. I'd go back and re-read that section again. You have zero
> rights as a security officer in that regard. You are nothing more than a
> glorified citizen on patrol.

essentially ya ... but even a citizen has the right to use force to detain a subject ... considering force (or assault) is any force (even a hand on a shoulder) to which the subject did not give you permission ...

> The ride the little motorcycles.

up here they ride go carts

> this coming from someone who spells controlled as
> C O N T R E O L L ED????

exactly ... typos are typos .. who cares ... its pety to bring them up ...

> gee..another slap at the US. Better stay up in Ottawa where's there's no
> crime...just little baton carrying security officers like you and Tasha
> Yar on the Star Ship Enterprise

Well when I spend my summers in the hamptons I don't get much hassle from the cops out there ... must be just a mainland thing ...

>
> Royal Canadian Mounted Police starring Rob St.Denis as the horses ass.

Actually I was thinking of going opp so I wouldn't have to go too far ... tired of moving ...

Actually, he reports reception of his own echoes. With just a 10 foot TVRO
dish, that's really impressive. Frequency used is 10.368 GHz.

Also on that site is a 5 watt 1296 MHz QSO with W7SZ using 5 watts of power.
The mode used requires 15 to 30 minutes to transfer the 28 character message,
though.

Neat stuff - makes EME possible for those of us without the real estate for big
arrays.

Aw, hell, we had a VHF HT at the summer place per an old post of mine.
Used it to talk at the boat on rare occasions. I doubt it was on the
air for three-four minutes per year. The fruitcake who strarted this
thread is talking using one of the 150 watt HF ssb marine rigs for
jollies.

Thanks for defending the marine frequencies, Phil. Let me add a few details that might interest anyone else reading this thread (I'm sure you know all this, Phil, but others may not). The FCC is responsible for marine radio licensing and for all enforcement of regulations. However, when it comes to interference with navigation, or interference with distress communications, the United State Coast Guard (Department of Transportation) is the primary enforcement authority. And these situations are often dealt with in criminal court, not through fines or other similar methods.

Both the Coast Guard and Navy maintain a round the clock watch on all marine distress frequencies from over a hundred fixed stations around the country (in addition to water and air assets). Likewise, both the Coast Guard and Navy maintain a number of RDF facilities to monitor all marine frequencies (not just distress frequencies - all marine frequencies are secondary distress). This also includes RDF equipment that can be carried by hand or in a vehicle (CGAUXCOM personnel receive training in this).

The penalties associated with these laws are very severe. In fact, if the interference results in loss of property or life, the illegal

operator can look forward to spending a significant portion of his remaining life in prison.

In certain situations, if the person is operating illegally, criminal prosecution can occur even if the person is not aware that he is interfering with navigation or distress communications (it is miles away and cannot be heard from his location). The premise behind this is that the interference, and therefore the resulting loss of property or life, was a direct result of the person's reckless disregard for proper operation and procedure (in these situations, the loss would not have occurred if proper operation and procedure was followed).

And, finally, I'll add one more point (since it is occasionally mentioned in these discussions). Marine communications is used throughout the country (lakes, rivers, etc), not just around coastal areas. Therefore, you're not free to use a marine radio just because you live miles from the ocean.

>And the only remedy is to vote them out at the next election.

That's no remedy at all! By that time, the damage is done,
usually irreparably. The only solution would be binding referenda
by membership on every major issue. Unfortunately, when it comes
down to that, membership scares itself away from that option as
well, even after complaining 'no one listens to us.' Either way,
then, 'the voters get what they deserve.'

> ticket in the past, then at some point PRIOR, that same person held
> a Novice ticket, right?

Not necessarily. Many, many folks have never taken a Novice test, nor
held a Novice license, nor taken a 5WPM Morse test.

The only two written tests I ever took were the Conditional and the Extra,
and 13 & 20 WPM Morse tests. (No, you didn't need to take all the other
tests, only the test of the class you applied for -- you did need 2 years
time-in-grade as C/G/A before you could take the Extra exam.)

Under the rules, if I were to let my license lapse for over two years, I
would need to take a 5WPM test to get a General or Extra license.

Under the rules, my cousin who held a Novice license for 1 year and let it
lapse in 1954, has credit for 5WPM and can become an Extra without taking
another Morse exam.

The ARRL pointed this out to FCC, but they apparently didn't understand
the question, and the gobbledygook in paragraph 17 is their response.

So long as they stay within the rules! When a freebander, newly
licensed as a ham, reverts back to his old ways - or a licensed ham
decides to "talk to those buys" with his ham rig, according to you he's
legal. Not so.

"Greg Elsbernd" <ki8jc@arrl.net> wrote:

> The "credit" is given to those that have a CURRENT license, not
> an expired one.

Not so fast! Go read the rules (97.505 Element credit). You will find the following categories of persons can get credit for Element 1 (the 5WPM test.)

--An unexpired (or expired but within the grace period for renewal) FCC-granted General or Advanced Class operator license.

--An unexpired (or expired but within the grace period for renewal) FCC-granted Technician Plus Class operator license.

--An unexpired (or expired) FCC-granted Novice Class operator license.

--An expired or unexpired FCC-issued Technician Class operator license document granted before February 14, 1991.

Read those all *VERY* carefully. (I copied the words exactly from the rules.)

Now look at the last two again. Note that there is no mention of the grace period. The rules specifically allow those two categories (but no others) basically a lifetime "free-pass" for the 5WPM test. My cousin whose Novice license has been expired for almost a HALF CENTURY can come back into ham radio, advance all the way to Extra, and will never need to take a Morse test.

> Some person walks into a VE session and says "I used to be a general,
> but I let my license expire 13 years ago, can I get credit for the
> 5 wpm test?"

The answer is "No".

But if his 13-year lapsed license was "Novice" or "Technician", the answer is "Yes".

The FCC is seriously out to lunch on this one!

Whew! At that frequency the gain of a 10 ft dish is more than 37 dB.
I'd have to get the books out again to figure it. (A ham pal and I once
built a few C-band TVRO dishes to use, and for a few friends. He made up
a jig in his metalworking shop to form the parabola in segments.)

The very best thing you can do is to totally ignore him, and them. He did go away for a long time when everyone stopped responding to his drivel. I haven't read a psoting from him other than what someone else quoted in a few years. There is so little he ever said that was worth reading that absolutely no loss was involved. Henceforth the Physicist/Security Guard from the tundra gets the same treatment here, for the exact same reason.

You have to understand the bureaucrat/lawyer mindset to see the logic.
It's basically that presenting evidence of passing a 13wpm or 20wpm
code test is just that. It is not evidence of passing a 5wpm code
test. The requirement for a new license is evidence of passing a
5wpm code test. An expired technician-plus or novice license is
such evidence. Anything else is irrelevant.

This flies in the face of the commonly held belief (and practice)
that competency at higher code speeds implies competency at lower ones.

Or maybe they did it just to piss off the older, already licensed
hams.

Perhaps this should give the amateur radio community pause before it
consigns its microwave allocations to commercial interests who would
"make better use of them by turning a profit".

I suppose you'll never know personally, but that's not pertinent. It's
really
just another example of how 'logic' falls flat on it's face. Slow code
cna be a real drag that tends to put a practiced operator to sleep, or
at least into some level of boredom, but it's grossly inaccurate to say
that a fast operator can't do it at 5wpm. Not so.

>
> Or maybe they did it just to piss off the older, already licensed

If so, it was a dismal failure which translated instead more into
perceived
contempt of their abilities to understand the factors that are their
responsibility.

They are not 'ours' to consign. Not that long ago hams were allotted
all frequencies above UHF. That was because there was no commercial or
govrenmental use for them in those (and earlier) times. That changed,
and naturally so did our amateur allocations. That process is just
getting well under way. We can expect it to continue, whatever we do or
do not.
Conversly, we can expect some expansion of our HF spectrum - as we have
had beginning in 1969, because of lessened commercial and governmental
demand -so long as no new and extensive uses are found to reoccupy HF.

If he is freebanding in the ham bands and gets a license, he is
no longer freebanding. If he is freebanding outside the ham bands,
he has little incentive to continue to do so after he gets a ham
license. Just as getting married makes an honest woman, getting a
ham license tends to mellow out freebanders. Otherwise, they wouldn't
spend the time and energy to get a ham license.

Did you hear that a bill has been introduced into the Texas Legislature
that will allow illegal aliens to obtain driver's licenses? The theory
is the same. If one drives a car, it is better for one to possess a
driver's license.

> - or a licensed ham
> decides to "talk to those buys" with his ham rig, according to you he's
> legal. Not so.

"Those guys" quoted from a posting long ago, referred to me talking to
CBers using my legal Radio Shack CB radio. Nothing illegal about that.
And emergency communications are legal using almost any equipment on
almost any frequency. I'm surprised an Extra class licensee is ignorant
of such things.

I do not think there is any "real policy' on this subject , but I would like to inquire as to what common practice might be.

Ever since I started in thsi hobby I have alwatys logged the "start time" of a QSO in UTC as the official time. Howevere.. I sure receive a awful lot of cards that obviously log the "end time" as the officila entry.

I don't think there is any question that UTC should be used but... I was wondering about the the "beginning or end" question.

Bill..

>>publicly-available databases to determine "quickness?"
>
>Nope. I know lots of hams and some VEs, that's all. Plus I read the amateur
>radio news of that time.

If you personally knew a thousand hams (and some VEs), that would
still be less than 0.2% of all US licensees. How many
Technician-Plusses did you say you "knew?" :-)

>The license totals are affected by uogrades even if they are not separately
>tabulated in the AH0A data. You are ignoring that fact.

Not ignoring anything...only working with another's tabulations.
If that is displeasing you, contact AH0A about his methods.

>If Len Anderson wants to ignore the presence and effect of "upgrades," he
>needs a quantitative value of that NUMBER that is available for reference by
>anyone.

The FCC database, in two files, is about 72 MB. If Miccolis has
the ISP time and a search-and-tabulate computer program, he
can do everyone a favor and show his work. Everyone else can
make do with what others provide free of charge.

>>Any other argument about "upgrade"
>>numbers is mere subjective opinion and not factual.
>
>The existence of such upgrades and their effect on the totals IS factual.

Your explanation is insufficient to resolve the subjectivity of
trying to say that upgrades "have an effect."

In the ten months from the end of June 2000 to the end of March
2001 the number of Technician class licensees increased by
16,029 but of that, 15,970 were new licensees exclusive of any
upgrading or modification or anything else except being new.
That leaves a difference of 59 which can be attributed to anything
other than a new license. Those 59 MAY include all those
Tech-Plusses who were automatically "renewed" as Techs, but
that group only represents 0.37% of the total change.

>SO? The effect is still there.

How BIG of an "effect" did you say it was? :-)

<"quotes" from past messages omitted for brevity...>

>Your understanding is still faulty.

OK, so 0.37% of all those added Technician licensees represent
something "significant" in showing that "many" Tech-Plusses
were "renewed" as Technician?!? 59 out of 16,029? I don't think
so...

>Emperor Anderson has spoken.

Now, now, you are getting testy... :-)

>Nope. The use of any timeframe in a nonvalid process yields nonvalid data.
>You use nonvalid processes - bad logic - mistakes - errors - call 'em what you
>will.

Tsk, tsk, you don't accept what I said so that means it is a
"mistake, bad logic, errors?" Of course you won't accept it
since that means acknowledging mistakes and bad logic on
Micollis' part. :-)

>You can call me names but that won't make your faulty logic any more valid.

Using another Extra's own sorting-and-tabulating values,
available free of charge to anyone, is somehow "faulty?"

Of course it is "faulty" because the data tabulations go
against the True Faith of what many think that US amateur
radio "should have." :-)

If the data shows trends away from what "should be" or
what is urban myth, then the data and everything about it
is "faulty." :-)

If the data is presented by someone not licensed in the US
amateur radio service, it must be "heresy" and considered
"faulty." :-)

>Why do they use the letter 'E' to stand for the word 'Analysis'?

A slip of the concept. The acronym "ALE" stands for
Automatic Link Establishment. My error in typing.

I was thinking of a previous job wherein the ALE controller did
the effect of Analysis by determining the desired path MUF.
That's not the task of ALE but rather a byproduct of the
initial test-exchange protocol.

Are amateur radio licensees experimenting with ALE? There
are, or at least were, two of them. Do you know who they
are?

Tom Frenaye recently told me that I am among a handful of people that regularly gives him my input on various Amateur Radio matters. Without input, it is not even a question of rationalization; the Board does the best it can with less data than it wishes it has.

The BOD publish their names, addresses, telephone numbers and email address in QST and on the ARRL Web. They go to conventions, hamfests and club meetings and ask for input. That is the "official" philosophy that I see.

On 10 GHz, the 12-foot dish would have approximately 48 dBi of gain. Total loss on 10 GHz, pathloss and reflection loss, is about 288 dB.

Here are the particulars:

RESULTS
Frequency = 10000 MHz
Total transmit power = 1.2 watts
Total transmit power = 30.79181 dBm
Transmit antenna gain = 48 dBi
Receive antenna gain = 48 dBi
Distance to receiver = 720000 km
Free-space pathloss = -229.5966 db
Moon-bounce loss = -58.7 dB
Total loss (+- antenna gains) = -240.2966
Receive system Noise Figure = 6 dB (includes external noise)
Calculated receive system sensitivity in 500 Hz bandwidth = -141.0103 dBm
Received signal = -161.5048 dBm
Needed processing gain = 20.49454 dB

Unfortunately, the same feeling of lawlessness that drives people to operate
between 27 and 28 MHz also drives them to operate about 28 MHz. I feel it
is very much my concern.

The ARRL Board is virtually a closed society. The current New England Division director is on his "second time around" on the board. The first time he was elected was a number of years ago. He was the young go-getter who wanted to shake up the establishment and try to change things. His efforts were in vain. The "Old Boy" network of the BOD would have none of it. It would take a massive turn-over to have any effect on the BOD and the votes will never be there. Why? I happen to believe it's because many hams (me included) are tired of beating their heads against the castle wall.

In case you haven't noticed, the vast majority of hams don't even belong to the ARRL (and there will be one less this summer: me). Have you ever stopped to think about why? I opted out ot the League in the early seventies over the incentive licensing issue. I joined up again during the last solar cycle because I was working lots of DX and needed to use the outgoing QSL Buro...and that was the *only* reason. I'm not a "lurker", either. I've held offices in local radio clubs, done disaster work, handled traffic, run a major packet node, done contesting, DX'ing and OSCAR. But I don't like what ham radio has turned into and I place a large share of the blame squarely on the League's doorstep.

I've long felt that the League needs to have a professional public opinion firm do a major study of *all* hams, not just members, and one of the objectives should be to find out *why* more hams don't join the ARRL. I think the results would be interesting, to say the least.

Will somebody please point out to me one instance where experience has proven the BOD's vision of ham radio's future to be accurate? In that same vein, one of the things that bugs me no end about the League and it's leadership is that they will *never* admit a mistake. The incentive licensing program was a huge blow to ham radio at the time but I've never heard anybody say it was a bad idea.

Canadian/British Spelling lesson in order:

Centre = Center
Licence = License
Honour = Honor
Cheque = Check

Got the idea, just regional differences, but some folks should have to
apply for a permit to enter Canada and then be clearly labeled.

BTW, Most of these guys couldn't even find Possum Lodge much less use
Ductape in a constructive manner.

This is true. In all the years I was a League member I never imagined they would do such a thing. I would faithfully read my QST every month as a good member should and never seen anything that said they were changing their position on licensing requirements. In fact, every QST seemed to indicate that the membership didn't want change.
Then one day, they hit us with the restructuring proposal. That was a sucker-punch if I ever felt one.

Commercial fishing vessels have been using the
Aeronautical HF freqs. for years as "private" freqs. to
avoid interference and toll charges. They've been doing it
with impunity and still are to this day, a situation far more
serious than what you describe here, as it could cause
potential interference to airborne aircraft. Any day or any
night one can tune across HF aero freqs. and hear dozens of
fishing vessels chatting away. There was token enforcement
when the FCC had monitoring stations open across the
country. Those stations and the ex-military intelligence types
who manned them are gone. ergo, enforcement is gone.
Use of aero HF freqs. by commercial fishing vessels continues
and has even increased. There has been no enforcement for
the last six years when the last monitoring station was closed
and monitoring personnel fired. Pull your head out of your ass,
wipe the brown off, and get a fucking reality check! You people
spew your shit here like you know something. FUCK YOU!
Go kiss some fucking Washington bureaucrat's ass. That's the
make believe world you better understand. PISS ON YOU!

I missed your stupid fucking assinine remarks about
the Coast Guard and Navy the first time I read your rant.

Get real asswipe, the U.S. Coast Guard devotes
nearly all its assets to stopping the flood of illegal drugs coming
into this country. What time they have left, goes to rescuing
drunken pleasure boaters. Your fucking full of shit, if they do
get involved in any "radio enforcement," it is a very high
priority situation and not a common every day duty like you
bullshit away here. Navy? Get real you fuckhead. Yes,
the navy will assist if asked in a distress situation. The navy
does not under any circumstances use their national intelligence
assets to routinely monitor marine freqs. The navy rdf and
intelligence assets are just for that, national intelligence collection
and in support of fleet operations and not for the routine domestic
shit you describe in your stupid rant. Repeat, FUCK YOU, go
spew your bullshit some where else! Get a reality check and
a life!

Exactly what percentage of the membership lets the ARRL know that they
feel that they have been screwed? You and three others? How would you
feel if you found out that 99% of the ARRL membership agrees with the
ARRL positions?

Yanks, Brits and Canucks were the ones outta date on that one. My Uncle
was
in North Africa on 7 dec with CF eating Lend Lease Beans, using a WWI
rifle,
and being supplied by Lend Lease Floating Stock. We lucked out on that
one,
Canada supplied the free fighting world for over 18 months waiting on
the
US to join (Individually, many fine yanks fought and died under the
Canadian Ensign).

Jap Zeros were the best planes made, if more had been produced,
hell, we be taking Japanese and German Language lessons right now.

How do you know the ARRL proposal wasn't the majority opinion
of the ARRL membership? You are about 0.0005% of the ARRL membership.

They were no match for the F14 in that Kirk Douglas movie. :-)

Actually, the Flying Tigers kill ratio was much better than 1:1. I can't remember exactly what it was, but it was rather impressive. It ranks right up there with The Alamo where 150 or so Texans crippled the Mexican army so badly that Santa Ana had no chance at the later Battle of San Jacinto.

"Best" is a relative term. The Flying Tigers were faster so they just strafed the Zeros, knocking some down, and simply outran the rest. A handful of US civilian pilots essentially stymied the Japanese invasion of China before the US entered WWII. The Zero pilots avoided any Chinese city protected by the Flying Tigers.

As a former flyer and AOPA member I agree with your basic sentiments.
But there are some very basic differences between the membership of
AOPA and the U.S. ham population and it's inclination to join the
ARRL. Right off the top a large percenatage of members of AOPA are
professional aviators of one flavor or another which is a no-counter
wrt the League. Why would a ham join ARRL to glom the AOPA car rental
discounts?? (the League does have a Visa card "deal". Zzzz.)

Nor can some pimply noclue nitwit truck on down to his local Radio
Slack and pick up a Skyhawk for $149.95 and put it "on the air" and
become an instant "ham bands pilot" after only checking a few boxes in
a lame multiple guess written ham exams. We should live long enough to
see one of them pass a "checkride" on the ham bands with an FCC
"examiner" like pilots do with the FAA counterparts in their spheres
of operations.

Don't ya'll just love these jerks? You know the ones that bitch about the
League and are not even a member. What a bunch of goofs.

You think that was bad...you shuda seen it when 'incentive licensing' was dumped on us...back around 68 or so.

I understand that most (all?) VEs use the Farnsworth method of
sending code for the test. IE, characters sent at some high speed
like 13wpm spaced at 5wpm rate. Guess the idea is if you train
for it this way, that you'll find yourself at high speed quickly once
you spend a few hours/days on the air.

Excuse me, I *am* a member. The point I and many other hams are trying to make is that we feel alienated by the League and have decided to not support it. Personally, I'm so upset about ham radio in general that I've given serious consideration to selling all my gear and getting out of the hobby all together. The one thing that's been keeping me from doing that is AMSAT, not the ARRL. I could have bought some nice gear with the money that went to AMSAT over the last few years for the P3D/AO-40 campaign. The ARRL hasn't gotten a dime other than my dues. I believe in AMSAT's goals. I don't believe in the ARRL's.

> >radio

What restrictions bother you? No business communications? That rule is to protect us from our bands getting invaded by commercial users and taken over. No dirty words? Not on any band. Broadcasting? Who's gonna listen on your frequency in a wrong band anyway? frequency restrictions, ie, no HF for no-code

techs? Well, you gotta hang a carrot to get upgrades.

But that doesn't cover anyone who did NOT enter via the Novice class. A
former maritime CW operator who started with a General doesn't count!
Hard to believe they can't get something so simple right.

Again to ask my question,

If they have Extra, Conditional or General, why do they need a credit?

I am really confused on that point.

> ticket in the past, then at some point PRIOR, that same person held
> a Novice ticket, right?

Not necessarily. Many, many folks have never taken a Novice test, nor
held a Novice license, nor taken a 5WPM Morse test.

The only two written tests I ever took were the Conditional and the Extra,
and 13 & 20 WPM Morse tests. (No, you didn't need to take all the other
tests, only the test of the class you applied for -- you did need 2 years
time-in-grade as C/G/A before you could take the Extra exam.)

Under the rules, if I were to let my license lapse for over two years, I
would need to take a 5WPM test to get a General or Extra license.

Under the rules, my cousin who held a Novice license for 1 year and let it
lapse in 1954, has credit for 5WPM and can become an Extra without taking
another Morse exam.

The ARRL pointed this out to FCC, but they apparently didn't understand
the question, and the gobbledygook in paragraph 17 is their response.

Referring to a ham who let his license expire and is getting back into
it.
If he was formerly a Novice(o ever took the Novice code test and can
prove it) he gets to skip taking a code test again. If he started as a
General first time he doesn't. Silly.

Have you seen this with your OWN eyes? I am in and out of the
Maricopa County jails regularly and can dispute some of your
allegations. As to others, I am not sure.

e.g., to say these people are guilty of nothing supposes trials have
been held. Is that a fact? If so, why are they in there at all?

Poor baby. Unable to coexist with differing opinons?

Why would it be "tolerable and constructive?!?

Is that so she can stifle dissent and impose rerself as the
"lead enforcer" by calling everyone who disagrees with her
names and to make false charges of others' conduct?

Hello? Can anyone pronounce Waffen SS?

Poor sensitive Hurt ex-marine. Tsk, tsk.

"Professionals" by definition get paid for their services. I've gotten paid for my electronics engineering for a long while and now enjoy a comfortable retirement. Some, who haven't enjoyed such careers or made much money out of their careers so far are sorely vexed that they haven't done as well.

How much do ex-marines get in pension benefits?

Source record: 6859

I personally think that anyone who has let their license expire past the grace period should have to start over if they ever want to get back into it. I don't think the FCC offered any kind of "credit" for any kind of past license. What I mean is if I had a general license 13 years ago and had let it expire, and came back before the restructuring, I would have had to start from scratch.

With that bit of clarification that you have given, I think both the FCC and the ARRL are wrong. The law should state:

"Any amateur with a CURRENT, or an EXPIRED LICENSE WITHIN THE GRACE PERIOD, can be given credit for the 5wpm code test by showing a CSCE or previous license.....yada yada yada."

I say that if they want to get back in, they take the tests. If they are already in, then give them the credit.

One thing that I personally want to see is people dedicated to the amateur radio service. Someone who let their license lapse, obviously didn't have that dedication, if they feel they can be dedicated to the hobby now then they got to prove it.

Referring to a ham who let his license expire and is getting back into it.
If he was formerly a Novice(o ever took the Novice code test and can prove it) he gets to skip taking a code test again. If he started as a General first time he doesn't. Silly.

>> Tell that to Al Haynes.

>Who is Al Haynes?

My point exactly.

Al Haynes was the PIC of a DC-10 which suffered the catastrophic failure of the hydraulics systems, and with the help of his FO and a deadheading Captain, made an unceremonious arrival in St.Louis, MO. This occured in July of 1989.

Although many people died, Captain Haynes' superior skills as an Aviator saved (I believe) about 120 people from what whould have been certain death otherwise.

Many say there are no heros anymore. There are, but in a nation that insists on repeating the names of the villians over and over, who can remember the real heros...???

>Who says you need to make 140k a year to be secure.

Homes that would otherwise be classified as "average" in the local metro Atlanta area (where I am at the moment) are STARTING at $180,000.

You think you are going to qualify for a mortgage for a home on your "security officer" salary, Rob?

>When I was working on contract I made about half that .. and I was in fine shape.

Congratulations. And your other obligations are...??? (kids, mortgage, medical bills...?!?!)

>Albeit this
>security thing doesnt pay nearly as good it does have the luxury of offering
>me part time employment and fairly easy shifts at which I pick dates and
>times I am available

You sacrifice one benefit for the other. I love the job I am presently doing and it pays well, but the enviroment and community suck. If I decide to shuck this and go back to living strictly where I want to live, I will take a significant salary cut OR have to travel somewhere ELSE (and deal with other enviromental concern) to make it up.

"Youse pays your money ands takes yor chances...."

Keep the code!!! Hell, anyone will be able to get a license if that is dropped. Anyone can study the written test and memorize what is in there. They actually have to work at the code. Yes people, I said work!

Perhaps they should all be made to cross their hearts and promise to be good and then get released. Face it, they are there for a reason, and it is not because they are particularly fine citizens I would guess. If you watch the video, you will see that the rooms are cleared frequently (like every hour or so) and thoroughly cleaned. Not having a chair or bed is not inhumane in my opinion. Neither I or anyone I have ever known has been put in one of those cells. Surely it is not just pure chance or bad luck that those who have, have been. I bet there is a good reason. The court system is there to figure out when, or if, someone has gotten themselves there in error. It works pretty well.

I maintain an e mail reflector called "ER-Nurses" and many of my "subscribers" are Canadian nurses. They are suffering "burn-out" well in excess of the numbers of similar US nurses except for the highest acuity shock-trauma units in NY, LA, etc.

There are many benefits to socialized medicine, and it looks real good on paper, but the realities and practicalities don't measure up to the expectations.

Well first off ... This job (which I have stated repeatedly) is only a
temporary measure while I am studying to be a peace officer. Second off ...
the house accross the way from mine went for 204k just a month ago. My
folks picked this one up with a gross income of around 80k (at the time they
were fresh out of school) and had no problem getting theline of credit to
purchase (not mortgage) the house.

School ($15k a year), Housing ($1500 a month for the condo), insurance
($3k), car (bout a $1000 for gas and such a month), then there is food, fun,
etc etc etc ...

As I had mentioned the security thing is a part time job while I'm in school
... it is a decent job for that ... fairly easy work, nice hours ... police
pay far better, better hrs and much more interesting work ... this is a nice
step to take before I get there

Excuse me, but you stated that you are fixing to drop the membership.

You remind me of the American voting public. You know the ones that spew they hate the system, or they dislike the two party system, etc. etc. They you find they didn't even vote.

See my point? If you want to change things GET INVOLVED.

If it didn't work the way you tried it before, try again and again. Thats what I do. Im a lifer pig of the league, but I dang sure don't support it all the time.

Maybe you should PFC Security Officer St.Denis. Maybe you should Jane's Book of Aircraft instead of See Dick and Jane Run.

At the onset of WWII, the Zero was by far the better plane than anything the US had at that time..which was The Grumman Wildcat.

It was faster, more maneuverable and had double the range than the F4F. Other than the Wildcat had better durability, the Zero was a far better piece of equipment until the arrival of the Hellcat and the Corsair.

Their carrier forces were fair and away more advanced than the Lexington or the Hornet. Their submarine forces were on par with the Germans, at that time, they were copies of the successful U-boats. Our subs were lumbering giants, nor the mass produced Fleet boats that would come 2 years later.

So tell us Mark...what were the status of the Canadian Air and Navy units at the onset of the war? I sure they were on par with everything that the mighty Canadian military had to invest??

Wx here's great and having wonderful time. Glad you aren't here. Flight was uneventful and we are flying into Orlando this afternoon to go to Epcot. Ohhh, I forgot...I'm showing my greed by spending money I earned. BTW..you are so full of shit is you think anyone believes you earn 70K as a part time rent a cop. Good luck on the bread lines. Keep climbing that welfare ladder

Another instance of the inadequate educational system in Canada which offers 2 years honors degrees in Physics.

Get a clue Rob. Never let it be said that facts ever got in your way

Paranoia prevails at Len's house again. All citizens, including those in California, can subscribe (free) to the same FCC Daily Digest email which provides the "timely notice" to ARRL and others interested in FCC news.

Last time I dropped my membership (for a couple years) was a number of years ago when *the BOD sued the FCC in Federal court* over something so trivial that today I can't recall what the reason was. Now, talk about alienating your supervisors.. how can ya beat that? No wonder the FCC holds them at arms length these days.

Do you think they 'followed the will of the membership' in that move? I sure don't. Of course, it's not possible to prove it, as they almost never poll the membership about anything, or on the very rare occasions they do, such as the "Do you use CW?" poll, they design a poll that is so screwed up it confuses far more than it reveals. Makes it easy to interpret it any way anyone wishes.

A couple years ago the BOD floated the silly idea to let all licensees "self-test" for CW, with the fact that an operator was on the air attempting to operate CW would stand as evidence of his ability to send and receive, as required under the Treaty. For a while it looked like that was a serious proposal, but finally it died. I'm as much aware as anyone that CW no longer hods the importance it did but it is still a basic primary mode and should be supported better than that.

Mind you, now, I'm an active League member, and just re-upped for two years last month, after a long personal review of the overall situation following the Restructuring. Long ago I declined the cheap Life membership because I decided it was important to be able to leave when they got too far out of line-which they sometimes have. But it might as well be understood, I'm gonna keep a CLOSE eye on them and their proceedings. I perceive that there is considerable improvement in more recent years as compared to some years ago. The staff is mostly quite competant if a little arrogant in places.

I have been a active ham continuously for 44 years, monitoring ARRL the entire time, mostly as a member, and have seen a lot of garbage eminate from Newington, right along with all the good.
I am not a critic of Incentive Licensing, we needed that, and I met the challenge as did so many others.
I don't like the idea that the League needs to have critics, but it is

clear to me that it is necessary to closely monitor their actions, just as it is with government.

Dick

No change of story. The time I used my IC706 running 3 watts AM on CB
CH19 was for an emergency which is perfectly legal. I'm surprised an
Extra class licensee is ignorant of such things.

> that welfare ladder

Never said I made 70k as a rent a cop ... did it on contract ...since you read my cv ... you would have noticed:

Radio Communication Technician - RCMP MCB A/B/O Division - Contract #7016723
But apparently you have troubles reading ... too much time staring into the sun as a taxi driver?

Welfare? that's rich ... hehe ... I have never used social assistance in my life ... heck I dont even know where to go to get it!

> Another instance of the inadequate educational system in Canada which
> offers 2 years honors degrees in Physics.

Its a 3yr general degree ... Try 6 classes a semester for 5 semesters ...its easy to do when you drop the work part ... a 4yr or honours would require another 10 credits ...

Check out what you ass??. You were the one that had our harbors being
bombed by outdated aircraft. When did the RAF bomb Pearl Harbor. For
that matter...mentally challenged doofus, when did the RAF participate in
the Pacific theater of WWII IN THEIR OWN AIRCRAFT.

Here's your own typed wordlets...

There's a reason for that, americans are too busy "not" spying on any
country they deem necessary, getting their harbours bombed by an out of
date air force

So what...other than Pearl Harbor, was there something else you were
referring to?? hmmmmmm...

Don't show your stupidity by making a statement and then answering it incorrectly.

The Mustang came out in 1943-44...well after 1941. But hey, that's that Canuck educational system shining brightly..yes sir.

So tell me Mr Wizard..how did the Spitfire land on aircraft carriers? What did they have...Velcro on their tyres??

Must have great on the airframes, them being made of wood with cloth wings and all. All that salt air keeping the fabric nice and tight.

Get a clue, better yet, get a box full. You are a treat.

2601. Hollingsworth Demands Space Shuttle

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-12 19:02:25 UTC
From: Keith <nospamssdf@home.com>
Message-ID: <3ad5fb16_1@spamkiller.newsfeeds.com>
Source record: 6899

FCC ham enforcement man Hollingsworth has demanded a
space shuttle to inspect the International Space Station
ham radio packet station. Apparently it has been using a
fake call sign of N0CALL for the last several days and
he would like to inspect the station for defects and
to make sure the ham radio license is properly displayed
on the wall.

Developing.....

Gee, I wish I had seen the whole thread. How much do ex-marines get in pension? Poor ol' marines? I recently heard from an old buddy of mine by e-mail. We served together in the Navy. I did my Vietnam stint (served 4 years) and got out. He was a radioman 2nd class at the time and went back to school. Then he joined another branch of the military. Hmmm ... he retired a chief warrant officer. Of course, he was a teenager when he joined the military (yeah, Vietnam needed bodies) - which meant he was able to retire - and start receiving his pension some years ago. Looked at a military pay scale recently? I'm not sure which grade WO he retired as, but I can see a $2000 to $3000 per month pension, plus lifetime medical care. Of course, he was too young to want to just quit, so he is teaching electronics at a college in California. Sooo .... I guess you'd best pass back to Lennie that the military ain't half a bad deal at all - it's just what you want to make of it! BTW, my dentist is retired from the military - and he's knocking down a good buck in civilian life on top of his pension. Then there is a good friend, Bud. He's a retired O-6 and ran an appliance store for a number of years. Heck, he keeps busy just tracking his various investments nowadays.

Again, the military may not be for everyone, but it, like anything in life, is what you make it. Treat it well and it will treat you VERY well.

From those friendly folks in Gettysburg.....

"Two petitions have been filed by Stewart Teaze...(snip)"

"Because these petitions were filed later than thirty days after the public notice of the Commission's action, we dismiss them as untimely. We note, moreover, that Mr. Teaze's request appears to be moot in light of the recently announce project to encourage more young individuals to enter the amateur service."

I pause here so as to make emphasis on the next sentence.

"While we applaud the amatuer service community's commitment to involve more young people in amatuer radio, we also do not believe this goal is advanced by adding additional license classes to the amatuer service license structure. Rather, we believe a streamlined and simplified license structure in which operating priviledges are related to examination requirements will encourage individuals to join the amatuer service."

A lot of windage for "KISS" it.

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

Absolutely wrong. Read below:

[Code of Federal Regulations]
[Title 47, Volume 5, Parts 80 to End]
[Revised as of October 1, 2000]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR95.409]

[Page 536]

TITLE 47--TELECOMMUNICATION

COMMISSION (CONTINUED)

PART 95--PERSONAL RADIO SERVICES--Table of Contents

Subpart D--Citizens Band (CB) Radio Service

Sec. 95.409 (CB Rule 9) What equipment may I use at my CB station?

(a) You must use an FCC certificated CB transmitter at your CB
station. You can identify an FCC certificated transmitter by the
certification label placed on it by the manufacturer. You may examine a
list of certificated equipment at any FCC Field Office or at FCC
Headquarters. Use of a transmitter which is not FCC certificated voids
your authority to operate the station.
(b) You must not make, or have made, any internal modification to a
certificated CB transmitter. (See CB Rule 25, Sec. 95.425). Any internal
modification to a certificated CB transmitter cancels the certification,
and use of such a transmitter voids your authority to operate the
station.

[48 FR 24894, June 3, 1983, as amended at 63 FR 36610, July 7, 1998]

Absolutely wrong. What is it about emergency communications that you
do not understand? Read below.

ï¿½97.403 Safety of life and protection of property.

No provision of these rules prevents the use by an amateur station of any
means of radiocommunication at its disposal to provide essential communication
needs in connection with the immediate safety of human life and immediate
protection of property when normal communication systems are not available.

That's alright. Just proving the simple rule that thems that ain't gots
is jealous of them that gots.

Supposedly Rob St.Doofus has a pilots license (doubtful)

He seems very upset with the fact that I get paid for the fun of flying
and not just paid..but to toot my own horn PAID. I have a house (paid
for)..a place to take my family on vacation (paid for), as opposed to

Secutity Officer St.Doofus having to rent and what's up with $1500 a month in Ottawa?? and I own a fairly new ..1997 airplane, which, after negotiating with the rich slobs who built up the company up and decided private aviation was better for them than commercial aviation, thought enough of my skills to not only hire me as their "taxi driver", but paid me and paid for my own plane, except gas and insurance. And he has to rent POOR BABY

The green eyed rears its Canuck ugly head and sez after getting hit between his close placed eyes and sloping brow....thank you sir, may I have another.

Suckie wx here on the gulf coast. no Orlando..no golf just TV and the writing of......ROB ST.DENIS SECURITY OFFICER ta da dummmmmmmm

>>>numbers is mere subjective opinion and not factual.
>>
>>The existence of such upgrades and their effect on the totals IS factual.
>
>Your explanation is insufficient to resolve the subjectivity of
>trying to say that upgrades "have an effect."

Nope. Your ignoring them is a process error. You need to show that the numbers
of upgrades are small enough to be ignored. You have not done that.
>
>In the ten months from the end of June 2000 to the end of March
>2001 the number of Technician class licensees increased by
>16,029

Let's check that out. AH0A says 208,838 at the end of June 00 and 224,867 at
the end of Mar 01. Difference is 16,029. That part you got right.

> but of that, 15,970 were new licensees

No. That's NOT correct.

First off, the number of new Techncian licenses in the period you mentioned is
13,494, not 15,970. This is because the new license total for the period is
figured by adding up the monthly new licenses of July 2000 to March 2001. The
new licenses issued in June 2000 are already included in the 208,838 total,
because those are end of month totals. So you are already off by 2,476.

Second, the situation is more complex than you present. Here's how it works:

There were 208,838 Technician licenses in the database at the end of June 2000.
At the end of March 2001 there were 224,867. This increase is equal to the
following sum:

(new Techncian licenses)
+ (Technician and Technician Plus licenses renewed in the grace period)
+ (upgrades from Novice)
+ (Technician Plus renewals before expiration)
- (expired Technician licenses)
- (cancelled Technician licenses)
- (upgrades to General or Extra)

You ignore most of those factors and just ASSUME that every new Technician did
not upgrade in the ten month period.

> exclusive of any
>upgrading or modification or anything else except being new.

Wrong. See above.

>That leaves a difference of 59 which can be attributed to anything
>other than a new license.

Wrong. See above. You presume that none of the new licensees upgraded in ten months.

> Those 59 MAY include all those
>Tech-Plusses who were automatically "renewed" as Techs, but
>that group only represents 0.37% of the total change.

Nope.

A few days ago it was posted here by Jon Bloom that, in the current database, there were 7079 currently active "T" (Technician) licenses with "P" (Technician Plus) in the "previous license class" field. That's straight data from the FCC database. 7079, not 59. That number is a minimum, because the FCC continues to renew Tech Pluses as Technicians every day.
>
>>SO? The effect is still there.
>
>How BIG of an "effect" did you say it was? :-)

7079 out of 13,494 is a bit more than half.
>
> <"quotes" from past messages omitted for brevity...>

You mean your MISTAKES. Do you deny that you wrote them? They are all in Google. Here are the ones you edited out that don't involve the above mistaken calculations. Are they accurate or not? Do you agree with them or not? If they are true facts, explain them. If they are false, say so.

(BEGIN QUOTES):

"For Technician-Plus license class the renewals can only be between 10 and 8 1/3 percent of all Technician-Plus licensees."

"For the Technician class licensee, the number of renewals will be small compared to all other classes because their initial numbers were small."

"Those 15,970 new Technicians still don't have any HF access with/without CSCEs."

(END QUOTES)

Not a true fact in that bunch. Yet you wrote all of them, Len. I think you edited them out because you are beginning to realize how wrong they are.

And they are just a small sample of your mistakes in postings here. You provide us with an embarassment of riches. ;-)

>>Your understanding is still faulty.
>
>OK, so 0.37% of all those added Technician licensees represent
>something "significant" in showing that "many" Tech-Plusses
>were "renewed" as Technician?!? 59 out of 16,029? I don't think
>so...

The correct numbers are at least 7,079 out of 13,494. 52%. Pretty significant, I'd say.

>
>>Emperor Anderson has spoken.
>
>Now, now, you are getting testy... :-)

Me? Not at all. I'm just pointing out your errors, Len. Your mistakes in logical processes and the handling of these numbers. Real engineers welcome having their work checked. Wannabes are afraid of having their faulty methods exposed.
>
>>Nope. The use of any timeframe in a nonvalid process yields nonvalid data.
>>You use nonvalid processes - bad logic - mistakes - errors - call 'em what
>you
>>will.
>
>Tsk, tsk, you don't accept what I said so that means it is a
>"mistake, bad logic, errors?"

No. Your method of using the data is faulty. Your understanding of the AH0A information, and some of the current FCC rules, is defective, faulty, incorrect, invalid. In other words, just plain wrong. As I have shown repeatedly.

>Of course you won't accept it
>since that means acknowledging mistakes and bad logic on
>Micollis' part. :-)

What mistakes have I made? What bad logic have I shown? The only mistakes and bad logic here are YOURS, Len. As I have shown.
>
>>You can call me names but that won't make your faulty logic any more valid.
>
>Using another Extra's own sorting-and-tabulating values,
>available free of charge to anyone, is somehow "faulty?"

Nope. It's the WAY you use them that is faulty. As I have shown, and which you refuse to accept for some reason.
>
>Of course it is "faulty" because the data tabulations go
>against the True Faith of what many think that US amateur
>radio "should have." :-)

Nope. It is faulty because you ignore what is really going on with the data. You use inaccurate, oversimplified processes and then declare the results to be valid.

Explain the 7079 Technicians with "P" as prior license, Len. Explain why, in the AH0A data, there are almost no Technician renewals prior to April 2000 and the all of a sudden there are almost no Tech Plus renewals and thousands of Tech renewals, yet you claim that "only 59" Tech Pluses have been reclassed as Technicians.
>

>If the data shows trends away from what "should be" or
>what is urban myth, then the data and everything about it
>is "faulty." :-)

That is YOUR philosophy, Len, not mine.

I'm an engineer. Engineers deal with facts and reality, not myths. Real engineers don't just shuffle numbers - we know what those numbers mean, their accuracy, and how they were derived.

If you like the AH0A data so much, take a look at the "differenced data" page...
>
>If the data is presented by someone not licensed in the US
>amateur radio service, it must be "heresy" and considered
>"faulty." :-)

Nope. It's the faulty method that gives faulty answers.

>How many hams out there (including the ARRL BOD) have ever stopped to think
>just *why* less that 25% of the hams licensed by the FCC belong to the ARRL?

What is your estimate of the percentages of the totals for each of the
following reasons that hams may not belong to ARRL?

o The ham became deceased during his or her license term

o The ham is not active

o The ham is suffering financial difficulties and is choosing to buy groceries
instead

o The ham does not know much about the ARRL so doesn't know if it is a good
value

o The ham is active only on a local repeater so does not believe he or she
needs to belong to a national organization

o The ham is late in renewing

o The ham feels very strongly about an ARRL policy matter and so cannot support
the organization

>AOPA boasts a membership of *over 50%* of the
>active pilots in the US.

What percentage of amateurs whose licenses are current with the FCC do you
believe are active?

>Since I belong to both organizations my feeling
>is that AOPA really *listens* to its members and what they want. My
>experiece
>with the ARRL over the last 24 years has been that the Board decides what's
>good for ham radio and the rest of us had better let them run things.

ARRL Directors publish their names, addresses, telephone numbers and email
addressses in QST. They attend club meetings and hamfests and go out of their
ways to ask for membership input. I don't know much about AOPA; do their
Directors do the same?

>The president of the AOPA, Phil Boyer, has dozens of "town meetings"all over
>the country every year with AOPA members. He always has other members of the
>top staff along that people can talk to.

In what way is this different than what Jim Haynie and the ARRL BOD members do?

>AOPA *gives away an airplane every year*!

Hmmm, that might explain some of your enthusiasm for the organization. :-)

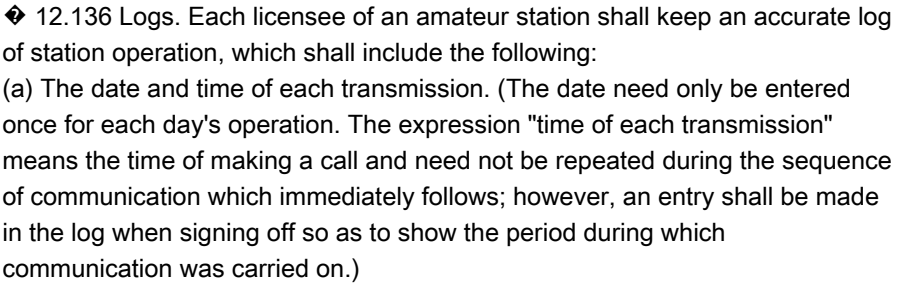
Back when we "had to" keep a log here's what the FCC Part 12 (long before Part 97) said.



12.136 Logs. Each licensee of an amateur station shall keep an accurate log of station operation, which shall include the following:
(a) The date and time of each transmission. (The date need only be entered once for each day's operation. The expression "time of each transmission" means the time of making a call and need not be repeated during the sequence of communication which immediately follows; however, an entry shall be made in the log when signing off so as to show the period during which communication was carried on.)

Based on that early requirement, I still have the habit of logging both the start and end times of the contact. I have, however, quit logging "CQ" transmissions. (Some of my early logs show "CQ" more often than call signs in the "Station Called" column!).

In article <20010409125200.02398.00001978@ng-ch1.aol.com>, Steven J Robeson K4YZ <stevenrobeson@aol.com> writes:

> That's an understatement.

Once there was a Guppy-named-K4YZ, and he wanted to grow up and become a fish. He told all of the other fish that he was going to be a big fish, but they just laughed and said "Guppies are Guppies, that's all they are." But this Guppy-named-K4YZ thought he was special. He thought if you could yell loud enough, insult others, and generally be a jerk, then people would think he was a big fish. But they only thought he was a loud-mouthed guppy.

So the Guppy-named-K4YZ decided to get even with the other fish. He would be loud and rude and butt in where he wasn't wanted and had no reason to butt in except to make a nuisance of himself. He thought by commanding all of the attention, he could be the biggest fish in the pond. The other fish soon tired of Guppy's obnoxious and boorish behavior. So they got together and told the Guppy-named-K4YZ what a great fish he was, and that he should have the water closest to the sun, where more creatures could enjoy his magnificence and splendor. Soon the Guppy-named-K4YZ was exploring the world at the surface of the water. He was telling insects how to fly and frogs how to croak. He thought his opinion was in demand by the other creatures and shared it whenver he got the chance. The other creatures didn't listen. They weren't in the least interested in the tyrannical rantings of a guppy. Even a self-centered, loud-mouth, egotistical Guppy-named-K4YZ. Then one fine day, the Guppy-named-K4YZ was laying back against a lily pad, telling dragon fly larvae how to swim, when a passing Kingfisher, not knowing his reputation or stature, swooped down and swallowed the Guppy-named-K4YZ whole. Days later the Guppy-named-K4YZ by coincidence was deposited generously back into the very water he was snatched from, and showed up here. Welcome back to the rrap pond, Steve.

>that dedication, if they feel they can be dedicated to the hobby now then
>they got to prove it.

The concept of "hobby dedication" is not in the FCC's declarations
or definitions of amateur radio. "Dedication" is a fine rousing-point
for fraternal orders, commonly used elsewhere in such groups. The
FCC licenses amateurs for the purpose of regulating US civil radio
but has not yet declared that "dedication" is a necessary part of
such licensing.

Is "dedication" a necessity to "prove" someone "worthy" of being in
the amateur radio community by members of such a group? Why
is that? The "amateur radio community" does not license anyone.

> What? It was "created" in the 50's and I can't "see" what has happened
>to CB "NOW" in 2001..???

Trying to bring up CB as some sort of bogeyman is false under the subject thread. If CB is some cause for alarum and the ARRL is somehow "at fault," then there should have been some explanation of how the ARRL did not help its membership because of the CB creation. Nursie did not bring this up, just inferred that the ARRL and the FCC was "wrong." No explanations, nothing but the extension of personal pejoratives to organizations. No thinking.

> Lennie, you really are an idiot. I thought it was just a "summer thing".

Showing fond regards will get nursie nowhere. :-)

I've never pretended to be an "officer" in some militia group. Nursie got a waiver to wear another uniform in some NON-federal, NON-National Guard outfit without having to attend OCS, West Point, ROTC, or any military academy?

How was the "brigade" meeting on the 15th of March? :-)

> You really are a very pitiful, sorry person, Lennie. I truly do pity
>you Moreso, I pity your wife who is going to have to care for you.

Whatever strikes your pejorative personality. :-)

My wife takes care of me just fine...just as I take care of her just fine. [tsk, tsk, nursie missed out on the big chance at charging "impotence" again! ;-)]

Is nursie going to bother with AMATEUR RADIO TOPICS or is she going to continue insulting individuals she doesn't like?

Nursie is reminded that each posting of hers reflects on the US amateur radio service as a role model for others.

>provides the "timely notice" to ARRL and others interested in FCC news.

Point taken. I do not subscribe to that daily digest any more...

That still doesn't explain why the FCC doesn't update their own
WTB amateur radio page to reflect new rulings. [a minor oversight
but the FCC doesn't seem to consider amateur radio that
important to keep that page timely]

Considering the daily digest supplies all that news, why does the
ARRL bother to maintain news from the FCC as if the ARRL was
the major supplier of such news? [see "full story," etc., and other
little journalistic phrases]

Just a few questions... :-)

There is an ongoing, irrelevant gang-machismo insult from nursie on IMPOTENCE. Sorry, little girl, I do not have that or even expect that. However, considering the number of times nursie has written it, she is probably post-menopausal.

>When was the last time you took an Amatuer Radio examination?

I have not taken any amatuer radio examination.

> And Lennie...YOU said you let your COMMERCIAL license "expire" October
>12th.

No. I said "virtually expire." For all intents and purposes, a commercial radiotelephone license has little need in US commercial radio. It is not a necessity for me being retired.

> Ergo ANY license that you procured at ANY age is irrelevant.
>
> Just like you.

False. Nursie will come on again with the "necessity" to take an amatuer radio examination in order to "appreciate it" or show "dedication" and personal resolve. Neither appreciation, dedication, or resolve is a necessity to show the FCC any license worthiness.

Nursie wants to roll around in the mud of personal pejoratives yet cannot bring herself to consider that a First Phone was a license examination at an FCC office in Chicago, March 1955.

Nursie can only mud-wrestle.

Nursie is a prime example of a US Extra class amateur radio licensee.

entity >unto itself.

Amateur radio is an interesting, fascinating avocation. To fully engage in that hobby there is a necessity to license those who emit RF.

Unfortunately, some of the licensed hobbyists emit more than RF in seeking to force all newcomers to do just as they did for their license. That emission results in false, misleading charges of "hatred, lies, and abuse" as if the emitter represents ALL of US amateur radio. Such emitters seek to rule, to be the authorities even though all they have are loud noises.

From 1940 through 1945. You don't know WW2 in any detail.

Before mouthing off ANONYMOUSLY it would be better to confirm
that the United Kingdom was at war with the Axis powers of WW2
before the United States. Canada was on the side of the Allied
Forces and actively fighting the war before the USA.

>Don't show your stupidity by making a statement and then answering it
>incorrectly.
>
>The Mustang came out in 1943-44...well after 1941. But hey, that's that
>Canuck educational system shining brightly..yes sir.

The first North American Aircraft "Mustang" flew on October 26, 1940.
The North American Model Number was NA-73X and was required
to have the civil aircraft registration NX-19998. [source: Rockwell
International public relations (Rockwell bought NAA some time ago)]

>So tell me Mr Wizard..how did the Spitfire land on aircraft carriers?
>What did they have...Velcro on their tyres??

A cursory check of older aviation literature will turn up a few
Supermarine Spitfires of more advanced mark being used
on carriers, called the "Seafire." Velcro had not been
invented yet so the Royal Navy used conventional arresting
gear.

>Must have great on the airframes, them being made of wood with cloth
>wings and all. All that salt air keeping the fabric nice and tight.

See Grumman, Vultee, and Douglas Aircraft models of WW2:
Wildcat, Dauntless, Avenger, and other good names (including
the "Vultee Vibrator"). Fabric and dope on tails and control
surfaces. Those were the victors at the Battle of Midway,

carrier borne all.

Brewster Aircraft Company, makers of that wonder of the fighter-plane skies, the Buffalo, went bankrupt DURING WW2. It was a US company.

>Get a clue, better yet, get a box full. You are a treat.

Get a truckload of civility, anonymous one, get a mountain of knowledge. You are NOT a treat.

Go join big steebie fighting the Battle of the Flippin Sleeze.

>His methods are fully explained on his website. It's your methods that are
>faulty.

Miccolis wishes to debate beyond the "fly speck in pepper" stage
stating constantly "errors, mistakes, fault!" :-)

I believe my math was close enough to be accurate in assessment
of the classes of licenses both before and after April 15, 2000,
namely that the New licensees' trend to Technician continues and
that there is no signs of any exodus to increase users on
amateur HF bands.

That trend is visible to all...except those who do not want to see it.

>Why? Your work is faulty. That is the issue. I'm not going to do your work
>for you.

Ooooo! :-)

>If someone makes mistakes in how they analyze that data, is it somehow
>"wrong" to point out those mistakes? If so, why?

Sorry, old fly speck, but my analysis is no more "mistaken" after
restructuring any more than it was "mistaken" before. You
DON'T LIKE THE ANALYSIS, therefore you brand the analysis
"mistaken, faulty, error, etc."

What YOU WANT is to keep the status quo as much as possible,
to keep the Faith in what all Good and Real hams "should" think,
"must keep" as a "moral" and (even) way of life. I'm not going to
do that since the environment is changing, the paradigms are
changing and evolving. I don't give you twenty cents for your
paradigms of the olden times.

<snip of fly-speckiness...>

>Me? Not at all. I'm just pointing out your errors, Len. Your mistakes in
>logical processes and the handling of these numbers. Real engineers welcome
>having their work checked. Wannabes are afraid of having their faulty methods
>exposed.

Bullshit. You are trying to act like Management. You WANT
certain conclusions and, by Hiram, you are going to get it. :-)

The trend of newcomers going to Technician was there before
restructuring. It continues. Further, against the grain of the
established ham conservatives, Techs are renewing as Techs.
Such is heresy against Conventional Wisdom (CW) of the
long-time ham conservatives.

REAL engineers challenge bad decisions in "open court" of
design review meetings or by going to other companies. REAL
engineers don't sit around complacent with state-of-the-art of
three decades ago or outdated methods. Avocations are NOT
engineering. Amateur radio is an avocation.

>No. Your method of using the data is faulty. Your understanding of the AH0A
>information, and some of the current FCC rules, is defective, faulty,
>incorrect, invalid. In other words, just plain wrong. As I have shown
>repeatedly.

All Miccolis has "shown" is a desperation to keep the status quo,
including keeping all the old myths alive. The status is not quo
and newcomers are not appreciating the standards and practices
of three, four, or five decades ago. Miccolis is in denial of the
obvious.

<snip>

>>If the data shows trends away from what "should be" or
>>what is urban myth, then the data and everything about it
>>is "faulty." :-)
>
>That is YOUR philosophy, Len, not mine.

The hell it isn't. :-)

>I'm an engineer. Engineers deal with facts and reality, not myths. Real
>engineers don't just shuffle numbers - we know what those numbers mean, their
>accuracy, and how they were derived.

Geez. A rather pompous way of trying to say Miccolis is the only
one correct. :-)

REAL engineers deal with facts, reality, environment, social climates,
public opinion, quality, and, certainly, some numbers. Lots of the
things that begin an engineering project developement aren't Divine
or cast in everlasting cement. Even the goals can change between
start and finish of a product. REAL engineers stay flexible, adaptable,

able to deal with change and changes.

The amateur radio Beliefs that you subscribed to three decades ago have changed, are changing. Right about now one out of three US radio amateurs are Technician class. The vast majority of that class has not taken any morse code test and it doesn't appear likely that they wish to do so. The FCC said 11 years ago that it did not consider morse code testing to be useful to them as indicating anything useful for licensing. It repeated that one and a half years ago. Long-time conservative hams are still stuck in their time-warp of "knowing what is best for newcomers" when all they are doing is making newcomers do the same as they did...for no reason other than making them go through a Hazing Ritual.

Newcomers aren't buying the old Belief set. They shouldn't.

Sheesh! Who cares? I let my license expire in 1981 and decided to get back into amateur radio in 1993. So what if I didn't pass the 5 WPM test, nor the 13 WPM test either? The way these tests are set up, anyone with a halfway decent high school education shouldn't have a problem testing out. Heck, if I had known that I could have credit for my license WN2CJV, I could have simply waited 8 years instead of spending a few minutes taking that simple code test.

Really?? And they first actually flown in combat didn't appear in the
skies till 1943.

The first B17 flew in 1936, but they weren't available in combat till
1940. The point made was that the aforementioned aircraft did not exist
during the attack and therefore the fact that Security officer St.Denis
even mentioned it was WRONG. There were NO Mustangs available to take on
the Japanese flights at Pearl Harbor. So, no pints for you, although you

can obviously cut and paste from reference materials very well, and for that you get a gold star

That's odd...all the Grumman planes for WWII in the Grumman museum here in Bethpage NY that flew for the navy have all metal control surfaces. According to them, it's because the constant humidity and water due to being at sea would allow any fabrics to stretch.

> Brewster Aircraft Company, makers of that wonder of the
> fighter-plane skies, the Buffalo, went bankrupt DURING
> WW2. It was a US company.

Oh Kay. And that was the "state of the art" aircraft at Pearl Harbor and Midway. Something far below the horizon compared to the Zero, which was the original discussion at hand.

Date: 2001-04-13 21:58:27 UTC
From: funguy@hotjuno.com
Message-ID: <MPG.15414103bbdc2cec9896b4@news.earthlink.net>
Source record: 6947

Just got an e-mail from a friend and this Lennie person is partially correct. The early production models of the Navy's Grumman planes did use fabric and doped control surfaces, however, in the Pacific theater due to the constant damp conditions of heat and humidity, the went to all metal control surfaces in early 1944. Although the fabric was initially more rugged, the damp conditions caused the fabric to stretch under stress and was deemed unsafe.

The planes exhibited at the Grumman museum are later models

So 1/2 a gold star to Lennie.

>>work!

>Why is "work" necessary?

I know of no radio Service where the rules require one to "work" to get a license; the rules set the necessary qualifications and require only that the applicant meet them. I see no difference in the licenses, or in the operating habits, of those for whom passing the test was relatively easy and those for whom it was hard.

Having said that, the premise that memorizing over 1000 questions is easy and memorizing 26 characters, 10 numbers and a few punctuations and prosigns is work is flawed.

As I have posted on many occasions, the pizzing contest starts on whether it was (a) a real safety-of-life-or-property emergency and (b) whether other communication methods and channels were available.

I'm sorry you are so ignorant of World War 2 and who was on
which side. While this is supposed to be a newsgroup on
amateur radio policy, it often becomes a forum on denigrating
our geographic neighbors. If not the southeast US against
everyone else, then some trying to show their "strength" about
a time when they weren't alive yet.

Anonymous one, you can go to another newsgroup to gather
information on who built what aircraft and when. Of 297,199
military aircraft built by US manufacturers in WW2, NAA
built 40,068 or almost 14%.

>> The first North American Aircraft "Mustang" flew on October 26, 1940.
>> The North American Model Number was NA-73X and was required
>> to have the civil aircraft registration NX-19998. [source: Rockwell
>> International public relations (Rockwell bought NAA some time ago)]
>
>Really?? And they first actually flown in combat didn't appear in the
>skies till 1943.

1941, not 1943. North American Aviation did the initial development
on the Mustang under a British contract. The first Mustangs in
combat were either Mustang II or Mustang III models. It wasn't
until 1943 that the US 8th AF made a transition from P-47s to
P-51s in the 4th Fighter Group (among others).

I left an opening for correction to make you feel good. Note the
second A in "NAA" stands for Aviation, not Aircraft. You didn't

correct on that, preferring to bluster on. No matter.

>The first B17 flew in 1936, but they weren't available in combat till
>1940. The point made was that the aforementioned aircraft did not exist
>during the attack and therefore the fact that Security officer St.Denis
>even mentioned it was WRONG.

No. Your only effort in here is NOT "correction" but simply
intimidation, bluster, and hot air.

>. So, no pints for you, although you
>can obviously cut and paste from reference materials very well, and for
>that you get a gold star

In this case, I did not "cut and paste" but rather consulted a PR
packet obtained at NAA some time ago by an acquaintence who
actually flew 51 doggies (that's the P-51D to civilians). In the
Pacific Theater of Operations. He's still around, BTW.

There are no "gold stars" desired or needed from anyone who
will wantonly pile up ##### on someone from an allied country
and neighbor during a time when it is doubtful they existed.

>That's odd...all the Grumman planes for WWII in the Grumman museum here
>in Bethpage NY that flew for the navy have all metal control surfaces.
>According to them, it's because the constant humidity and water due to
>being at sea would allow any fabrics to stretch.

That's wrong which you will admit in another post. [there's some
rather optimistic hope for education, misplaced though it might
seem]

Those old Battle of Midway and Battle of the Philippine Sea
aircraft such as the Douglas Dauntless (SBD) and Grumman
Avenger (TBD) carried radio operator - gunners who had CW
and voice radios. There was no conformal coating used on
those radios, either (long-timers would know that as MFP or
Moisture-Fungus Proofing). OOK CW has also disappeared
from USN aircraft some time ago.

>Oh Kay. And that was the "state of the art" aircraft at Pearl Harbor and
>Midway. Something far below the horizon compared to the Zero, which was
>the original discussion at hand.

Aviation newsgroups are far down the hall to the right. Go there
to "argue" about aviation that you don't know much about...

>Ahhh but I have a lot of tricks up my sleeves. Just curious?? What is
>you problem? You seem to have a redwood size chip on your shoulders. I
>have yet to see one civil post come under your moniker. So would this be
>a case of do as I say and not as I do??

No "chip." I've designed in chips in electronics and radios and
cut my first HF communications teeth in the Big Leagues of

military radio back in 1953. No OOK CW used then over
trans-Pacific fixed-point to fixed-point long-haul circuits. My
only advocacy in here is to talk about eliminating the amateur
radio telegraphy exam...and to prod a few "credentialists" who
don't act nice.

>As to who I am, amongst my friends, my name is Jonathan. As to my
>knowledge, it's more than adequate.

Not yet. Not adequate.

>I don;t require a handful of days to
>sit in front of a computer just to cut and paste out of a CDRom book.

Neither do I.

>Aren't you the guy who is infatuated with Nazi Germany?? You seem to
>refer to them a lot.

My first wife was a Jew. Nice troll. Now, go take a shower...

>Well, no use for you that's for sure.

Pizz off, Jonnie Whoeveryuare.

I've noticed that you rarely if ever contribute to amateur radio policy.
I've noticed that you like to post the same resume as to your
achievements on a regular basis. I've noticed that none of those
achievements are related to amateur radio in the least bit.

I also noticed that YOU failed to notice the I did not start, but that
the Security Officier began the assault in terms of geographic
bombastically (sic)

The original discussion was that the Mustang was available during Pearl Harbor as compared to the Japanese Zero. Thanks for verifying my statement.

You forgot the part about the British refusing to use the Mustang until they put a Rolls Royce Merlin engine in..until the Allison V-12 became better.

>

Better yet Lenn. I have found that people are oh so brave when they can hide like cowards behind a keyboard and a screen, so I tell ya what I'd like to do.

I am flying out to Dayton for the Hamvention in May and then some friends of mine and I are going to Vega for a week for golf and gambling. Here's the deal..I'll fly in LAX and meet you for coffee and bagels and you can tell me all your great exploits to my face. You can even pick the spot for breakfast. Whadda ya think? I think you're a coward and will most likely come back here with some brave typed words and you'll waffle and do anything not to have this come off. Cowards of your ilk usually turn

tail and run when confronted.

SOme Leonard H. Anderson..put up or shut up.

OK ladies and gents..here come the brave words....whine mode on....stage
is all yours LHA.

The point is that while the NRA represents all gun owners only NRA members get to vote for their BOD. Everyone else may comment on the NRA and it's policies and procedures but that is all. The NRA BOD like the ARRL BOD can pretty much ignore the nonmemberes.(and members to at their reelection risk)...

Ed I can't believe you'd risk stirrimg me up again. :~}

Hey, it's the premise that's flawed, OB. Learning 26 CW characters, 10
numerals and a few punctuations do not a CW operator make, maybe a Cub
Scout badge it will earn (or would have 40 years ago). All that plus
much, much, much working practice is needed, as you well know.

On the other hand, one does NOT memorize any ~1K of questions and
answers. One commits to memory the associations needed to pair questions
and answers on ONE test element of the pool, and repeats as necessary
untill that element is satisfactory scored at the 70th percentile. At
which time he begins anew with the next higher element's portion of the
pool, etc, etc, etc until all tests have been satisfactorily completed,
and he or she is now a freshly minted Extra clueless.
Got it?

Appears Leland and Doug are up to some tricks again. A peek into the cb room will see what they have been up to lately. Please check headers carefully when it looks like a troll, as it is probably forged. The numbert of phony posts in rec.cb that are traceable back to these two are astronomical. Below is a post from Leland under one of his alias names he was using at the time. He was having a bit of trouble ending his posts through the remailer. This post exposed who was behind much of the pornographical and obscene language on the cb group. He finally got careless and didn't delete his sig. about, "Morse Code." Doug continues to post daily, obsessed with policing our group for so much as a clipped clarifier or a mod, then accusing the poster of being homosexual. A careful archive search will reveal his nature and alignment with Doug, and their preoccupation with porn and graphic posts. In this very forum, Leland, a computer science major, (Accoding to QRZ) was told by 2 separate amateurs that a post meant to look like it came from me was forged. Leland was adamant in claiming it was posted by me, but why, I have no idea. You would think a computer college grad would be able to tell a forged post from a webtver, no? I have asked him to explain this on many occassions, and when I do, well, just take a glance at the cb room. There are many questions for which Leland will not answer, but the only answer I want, is why? These two folks are the poorest examples of amateursI have ever come across. Hundreds of forgeries and pornographical posts are logged, and they are now attempting to cross post in order to further escalate their trolling. I do not post in amateur radio, so if you ever see a post from me, please check the headers, as it is a forgery. Have a good day.

>like to do.

That's what you would "like" to do? No. You are writing that
because you want to get even over some negative criticsm
about trying to defame and denigrate a Canadian radio amateur.

Immature "challenge."

>I am flying out to Dayton for the Hamvention in May and then some friends
>of mine and I are going to Vega for a week for golf and gambling.

Of course you are. Can an Aeronca C-3 carry passengers?

...and it's "Las Vegas."

>Here's
>the deal..I'll fly in LAX and meet you for coffee and bagels and you can
>tell me all your great exploits to my face. You can even pick the spot
>for breakfast. Whadda ya think?

I think the above is below-average creative bullshit.

The above, more or less expressed as if by one Steve Adell in
here, has been tried before, didn't work then, is meaningless now.

In order to make any real point there should have been a
"challenge" made to participate in some amateur radio net
or at an amateur radio club or association meeting, talking
about radio or amateur radio. That way the anonymous one
could have shown her "expertise" over mere mortals,
achieved "fame" and "glory" at being oh so much "better,"
had a Real Audience who could verify everything...and
reported it over the Internet.

>I think you're a coward and will most
>likely come back here with some brave typed words and you'll waffle and
>do anything not to have this come off.

Grow up. This is not a schoolyard.

>Cowards of your ilk usually turn tail and run when confronted.

Grow up. Address the subject.

Anonymous jonnie tried to throw dirt on a particular radio amateur, then threw #### on Canadians in general over the second world war, not using recorded factual information or civility. jonnie was corrected but still insists she was "wounded" and demands a personal confrontation. Idiot.

Try learning something about our geographic neighbors, including their history. Canadian radio amateurs have done some good things in and of amateur radio...and for their nation. Far better things than the blustery babble of braggart boneheads.

>SOme Leonard H. Anderson..put up or shut up.

The anonymous one wishes a personal confrontation? Fine, she can then drop by my QTH and do just that. :-)

For someone as wise as you..well. The comment was made that we were
bombed at Pearl Harbor by an out of date airforce. Data and facts prove
otherwise. At that point the poor denigrated Canadian amateur radio
operator opted to try and change directions, ala Anderson and point out
that the Mustang and Spitfire were superior. The fact that one was not
yet in the air and the other was in the European theater didn't make one
difference to either you or Security Officer St.Denis. BTW, did he hire
you as his personal PR man? Or couldn't he handle the heat by himself?
One will never know.

What for..YOU COULDN;T PARTICIAPTE now could you? What would be the point if you couldn't stick your nose in and throw out some of your BS. Or am I wrong?? Maybe you do have a license? In that case, I'd be more than happy to set up a schedule for you to participate. I liken you words to be along the lines of that other wizard of the airwaves Art Bell.

Thanks for proving my point. Why not use OH YEA!!! So's your old man.

ANd the subject before you stuck your nose in was proving that St.Denis didn't have a clue as to Pearl Harbor. and the state of the US armed forces at that time. I notice you didn't bother to research his erroneous information. I thought you were in that war Len? You seem to know so much 1st hand. Then again you seem to know so much 1st hand about everything.

>
> Anonymous jonnie tried to throw dirt on a particular radio amateur,

DEAL!!! I'll let you know the time. I'm willing to make book you won;t be there or if you are, probably pretending you aren't home. Let's set the date, shall we.

Dayton end on Sunday, May 20th. Figure a day or two to fly out to LAS VEGAS (happy now Mr. Anal Retentive?). A day to settle into the rooms and a round or two of golf and gambling.....and since LAX really discourages private aircraft and it's cheaper to fly commercial from Las Vegas to Los Angeles... let's set the date as Wednesday May 23. Time to be determined. SO what say little fuhrer?? OK with you??

OK Lenny. Here's the original statement that caused you to stick that big nose you yours into the discussion..

There's a reason for that, Americans are too busy "not" spying on any country they deem necessary, getting their harbours bombed by an out of date air force, having their federal buildings bombed by a crazy guy named tim, having universities bombed by another loon from the middle of nowhere, dealing crack to 10 year olds, beating your wives, and raping your kids.

Since you chose to defend the Secutiry Officer, I guess we can safely say that you AGREE with him, out neighbor to the North 100%.

Feel free to refute the first slander, since that was what started it all.

The response was that the Zero was a better plane than the US had at the time of the attack.

St.Denis came back and dropped the Mustang and Spitfire into the mix as his proof the Zero was inferior.

GO ahead Lenny....dazzle us with your cut and paste prowess.

Still, your expertise is in things Nazi. Maybe you can provide 1st hand knowledge of the ME109 or better yet the ME262. Obvioulsy they were better planes than the zero and were probably active participants in the attack of Pearl Harbor.

Thanks for making our day. So go do that Voodoo you doodoo so well.

Gee, I don;t know. You seem to be the Mr. Wizard of cut and paste so I
am sure you already know the answer. Can a Piper Seneca 3 carry
passengers? Probably not. It was Aeronca's answer to the Piper Cub
which couldn't carry passengers, just a right seat and some baggage, but
since they stopped making them in the late 40's, early 50's, I leave the
answer to you, someone who amongst his many accomplishments probably not
only flew one, but designed it as well, or at least the radio circuits,
purposely avoiding those that use OOK Morse.

Here's one for you Lenny. What is the airspeed velocity of a laden
swallow?

Dick, you may think that the demeaning and abusive behaviour you exhibit on this forum is appropriate. I think it is no more than mean-spirited and destructive.

Fortunately, most of us who love and enjoy Morse code are able to point out that such conduct is not a result of the "hard work" that you put into learning the code; it is a personal choice that, fortunately, most hams do not take.

It doesn't change the fact that ham radio is dying on
the vine. With 67 yrs being the average age of ham
op's, it won't be long before the whole thing is a memory
confined to the obsolete heap of technology along with 1200
baud modems and code keys. Hamfests have all but
dried up. People ain't buying radios except for VHF stuff.
What young person, except for geeks, want's to go thru
the trouble of stringing up aerials around the house when they
can use the internet with T1 lines and get streaming 2-way video?
FRS radios outsell ham rigs by 3000%

Source record: 6984
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I don't think that handling emergancy traffic with your ham gear on 11 meters was such a legal transmission. Your Icom 706 isn't type accepted equipment to be transmitting on 27.185MHz. I really don't think you will get into trouble for handling emergency traffic on CB with your ham rig as long as you don't make a habit of it. I would sujest setting up a type accepted CB station (they are very inexpensive) if you are going to handle emergency traffic on the CB band.
All though, I honestly don't think that the FCC is not going to do anything about freebanders and the technicians that set their radios up for them. Freebanders are all over the place here in Madison County GA. The hams that are in this area aren't much help. They use their ham equipment on 11 meters too. All this does is sets a bad example for future possible hams. Just like you they think or just don't care about what is legal and what is not. Why should somebody get their ham ticket? I mean if they can get on CB radio and "shoot skip"(work DX) without worry of repercussions. Why work to get the ticket? That is why it is important to follow those pain in the rear part 95 rules and regulations. That example we must set is just to important to let go of.
In my honest opinion I think that the FCC and ARRL should form a ticket for those 4 million CBers and allow true hams General and above run 1500 watts pep on 11 meters. tech. and novices 250 watts and the no license CB ticket 4 watts just like it is now. You can bet that this would get more people involved in ham radio. I think that it was a mistake for the FCC to take that band from us in the first place. Thats just my opinion!

when normal communication systems are not available.
I find it hard to believe that there was no normal communication systems
available. Cell phones are everywhere.

Probably not as curious as some of the virtual porn being served up by a few hams on the newsgroups. I assume the hams in question had good training on certain frequencies on 75 or 20 meters. And we thought W2OY was bad back in the 60s! He was a prince next to some folks today!

2690. Re: Questions on Marine radio

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-15 20:21:31 UTC
From: "Public <Anonymous_Account>" <remailer@xganon.com>
Message-ID: <c06e2acdcaa1cbc25235662408c9b327@anon.xg.nu>
Source record: 6991

I laughed my ass off when a couple guys in this thread spouted off about all the government enforcement if someone unauthorized uses the marine bands. One guy even boasted BIG federal penalties. I got news for you. I'm in commercial radio. We find people all the time using cheap marine radios for CB style communication, both local and long distance, even kids using it as a hobby, like CB, just to screw around with. THERE IS NO FEDERAL ENFORCEMENT. We've turned in the exact location, names, and other operating information to the FCC and other feds. They don't care. They have NEVER EVER done anything to stop this illegal operation on marine frequencies. and like one guy here said, it is a growing hobby. Crap, I've seen do gooder hams in Chicago, Detroit, and other cities turn in these illegal ops. Nothng, absolutely nothing has ever come of these complaints. I even turned in a couple guys who were operating on calling and distress frequencies, and nothing was ever done. The illegal ops continue, even now and have continued for years.

Yup. Most of them flew P-40s.

>I
>can't remember exactly what it was, but it was rather impressive.

Agreed - particlularly considering their limited numbers and long supply lines.

>It ranks right up there with The Alamo where 150 or so Texans
>crippled the Mexican army so badly that Santa Ana had no chance
>at the later Battle of San Jacinto.

I thought the biggest factor was the delay. The Alamo held out for so long that
Santa Ana's opposition had more than enough time to prepare for San Jacinto.

What has always puzzled me is why Santa Ana did not simply bypass the Alamo. He
could have left a small force behind to keep it surrounded and cut off while
the rest of his army went on to San Jacinto. Focusing on a tiny fort with only
150 defenders was just plain dumb.

But if you want to talk about being hopelessly outnumbered, the prize must go
to the battle of Rourke's Drift, where 104 British soldiers (many of them sick
or wounded) held off more than 4000 Zulu warriors in a three-day battle. The
officer in charge, by the way, had never been in battle before. He was an
engineer, sent to build bridges.

>"Best" is a relative term.

Absolutely agree.

> The Flying Tigers were faster so they
>just strafed the Zeros, knocking some down, and simply outran the
>rest.

The P-40s could dive faster, and were more heavily armored. The Zero was a
state-of-the-art aircraft at the time, but that does not mean that all Japanes
pilots knew how to use it to best advantage.

> A handful of US civilian pilots essentially stymied the
>Japanese invasion of China before the US entered WWII.

Technically they were "volunteers" - another word for "mercenaries".
Considering what the Japanese were doing in China from 1937 on, it's clear that
their cause was morally justified.

> The Zero
>pilots avoided any Chinese city protected by the Flying Tigers.

Only problem was that there were far too few Flying Tigers.

The aircraft know as the "Zero" was actually a whole family of aircraft, used
for a variety of purposes.

--

The Japanese had world-class military technology at the start of WW2, and they
had plenty of it. The Zero was in no way "outdated" at Pearl Harbor. But Japan
did not have the ability to keep up with rapidly changing technology as the war
progressed. Worse, many Japanese military policies and bad decisions reduced
the effectiveness of the Japanese military, and helped them to snatch defeat
from the jaws of victory.

For example, it was standard US Navy policy to rotate combat personnel. Sub
crews and carrier air squadrons were made up of a mixture of experienced and
new people, and many of the most experienced were sent back to the States to
teach in the training schools. End results were that things learned in combat
were taught to newcomers, no combat unit was made up of all new or all
experienced people, and losses did not wipe out large numbers of experienced
people.

The Japanese did not rotate their people - they thought a combat pilot should
just keep flying until killed or incapacitated. End result was that their
experienced people were all concentrated in a few groups. Japan's biggest loss
at Midway was not the four aircraft carriers and associated airplanes, but the
hundreds of experienced pilots and support personnel who went down with them.
The ships and planes could be quickly replaced, but not the people and their
experience.

>--
Nonsense, Cecil. Apples and oranges.

The ARRL BOD is not a united, homogeneous group with only one opinion. Their views on various issues vary all over the map. On the code test issue, the views of the various directors range from "absolutely no change" to "get rid of it ASAP".

Until recently, the majority view was "keep code testing" and "don't change S25.5". Directors who ran on nocodetest platforms were usually not elected. Many directors do not have a cast-in-stone codetest policy.

Recent events (input from members, FCC statements concerning restructuring and the IARU Region 3 meeting last year) eroded that majority view to the point that the official policy changed.

By not telling the membership how the various directors voted, the membership cannot hold the directors responsible for their actions. This works both ways, for and against. Yet such actions are clearly allowed in the bylaws.

I am pleased to say, however, that my director moved for a roll-call vote. His motion was defeated, though.

If the directors are the representatives of the membership, then the membership has the right to know how the directors voted. We are not three-year-old children who need to have the truth hidden from us "for our own good".

In article <3acee883@news.sierratel.com>, "Bryant" <signet@cnetech.com> writes:

>
>Dear Dick and Larry,
>
>I've got to hand it to you two Nobel laureates.

Bryant:

Sorry, no takers. Dick and I aren't looking for handouts -- and we're tired of giving them out to people who are perfectly capable of learning a few simple things about ham radio all by themselves. The person who made the original posting has a computer and obviously enough knowledge of it to post a message on a Usenet newsgroup. He must have an internet connection and a browser, so why couldn't he have done a simple search? Name any topic whatsoever, and I will find you some kind of information on it, without having to post a message to a topic-related newsgroup asking for a handout.

>You guys must also have
>psychic abilities and knew I was downloading an amateur radio newsgroup for
>the first time. Who do you think you are to attack this man and insult him
>for no reason. You know nothing about him and his life and yet you respond
>back to him with insults. What you two did flies right in the face of
>everything that Ham radio stands for.

Yada, yada, yada. Dick and I don't think ham radio stands for hopeless technical ignorance. And anyone who would have to post such a question to a Usenet newsgroup would be quite well within that definition.

>First and foremost with all Hams is
>the ideal of the dissemintation of information. It is how we inform and
>teach ourselves and others about our hobby which in turns causes us to gain
>new members that strengthens our hobby and enrichens not only our lives but
>others as well. It is the same for all hobbies whether it is model
>rocketry, radio control cars and planes, Civil War re-enactments or any
>other hobby you can think of.

I don't disagree with any of that, and I'm pretty sure Dick wouldn't either. However, there are way too many "hams" these days, even a lot of them with Extra-class licenses, who seem to be technically uninvolved to an embarrassing degree. These days, "Elmering" isn't just providing guidance and encouragement, it's showing the guy which button to push, and then pushing it for him! The problem is, there is a wealth of information out there, most of it free for the taking, which goes by the wayside because the new "consumer-oriented" hams couldn't be bothered. Some hobby.

>Did either of you two ever think that maybe
>some people are happy just working the VHF/UHF bands?

Sure, but that's also a very readily available excuse to never learn any practical communications skills. It's the same attitude which, in my area at least, has kept ham radio locked in the Dark Ages.

>Maybe RG had a period
>in his life where he had to put his his hobby on the backburner and is just
>now getting back to it. I was going to reframe from attacking you two but
>since I took your comments personally you two are now fair game.

Is that anything like "refarming?" You seem to be singing a very sad refrain.

>Everyday
>I'm out there trying to convince kids and adults alike to realize that there
>are other things in life to do other than drugs, the television, and
>celebrity idealization.

And, of course, you think Ham Radio is the obvious answer. Well, isn't that just so Newington-ish of you. I think smallbore rifle shooting is the answer myself. Ham radio is nothing I'd get kids involved in anymore because it's been dumbed down to the point where it really doesn't hold any useful educational value. And, considering the fact that the average 13-year old can communicate globally on his/her own computer, where is the incentive?

>And in case your pea-size brains didn't think of
>it, children do have access to computers and may watching what you post.

I see. They're seeing you accuse me and Dick of having "pea-size brains" at the moment. How charming. It seems to me that if you really cared, you would have been a bit more polite, in spite of how we may have offended you.

>I
>know guys like you...I can time my watch to the way you act...No doubt you
>two probably have at least $50,000.00 apiece worth of ham radio equipment
>with huge towers and yet your front yards look like they could have been
>used as sets for the movie "DELIVERANCE".

That's where you'd be wrong, at least in my case. I've been a ham for almost 20 years, and my lifetime expenditure in ham gear has probably yet to reach the $5,000 level. This includes two complete HF stations, 3 2-meter mobile rigs, 2 UHF mobile rigs, a couple of HT's, lots of tools, parts, two PC's dedicated to amateur data modes, and other incidentals. I operate from a 3rd floor apartment using indoor dipole antennas on 30 thru 10 meters, never exceeding a power output level of 25 watts on HF CW, RTTY, PSK31 and other data modes. I use no HF SSB whatsoever due to my setting and the higher power requirement SSB imposes, and the TVI that goes with it. The outside of my apartment building is, admittedly, not in the greatest of shape, but that's more a reflection on the poor management of the property than anything

myself or my fellow tenants have done -- inspite of paying the highest rents in our city (Dover, Delaware).

>By way, your tickets are a
>privilege and not a right and thus can be revoked at any time!!!

Only if we do something to *cause* them to be revoked. Telling the truth on a Usenet newsgroup doesn't jeapordize our licenses one iota. What was your point, anyway?

>Oh yeah,
>one more thing -- my license is expiring this summer. I'm a no-code tech
>and would like to know how to renew my license////////

My advice is -- Don't let the door hit you in the ass on your way out!

73 de Larry, K3LT
Anxiously waiting for the FCC to "revoke" my license at Bryant's request!
Are you shaking in your boots yet, Dick?

People who grab advanced (not Advanced) class ham licenses without
learning anything meaningful, which is clearly allowed and regularly
done, can fairly be characterized as I have done, and denial of the
facts doesn't change them. Telling it like it is, is neither demeaning
nor abusive.

> I think it is no more than mean-spirited and
> destructive.

How about instructive? Many of those folks don't know that they are
without knowledge, after all, they have passed the Extra class test.
Shouldn't that prove something? Yes it should, but in fact it does not.

>
> Fortunately, most of us who love and enjoy Morse code are able to point out

The siege took a lot of time but the actual battle lasted less than one day.
There were a lot of demands for surrender. All the Alma defenders knew they
were sacrificing their lives in nothing but a delaying action and their kill
ratio was quite high.

> What has always puzzled me is why Santa Ana did not simply bypass the Alamo. He

Yep, one of his officers congratulated him after the victory at the Alamo.
Santa Ana replied that one more victory like that one and he wouldn't
have an army left.

I'm glad you weren't Santa Ana's advisor. If he had listened to you, I
might be speaking Spanish right now.

> The North American Model Number was NA-73X and was required
> to have the civil aircraft registration NX-19998. [source: Rockwell
> International public relations (Rockwell bought NAA some time ago)]

The Curtiss P40, developed from the P36, was America's foremost fighter in service when WW II began. P-40's engaged Japanese aircraft during the attack on Peal Harbor and the invasion of the Philippines in December 1941. They also were flown in China early in 1942 by the famed Flying Tigers and in North Africa.

The P-40 served in numerous combat areas - the Aleutian Islands, Italy, the Middle East, the Far East, and in the South pacific, and some were sent to Russia. though often outclassed by its adversaries in speed, maneuverability, and rate of climb, the P-40 earned a reputation in battle for extreme ruggedness.

By early 1944, the P40 had been replaced largely replaced by faster and more powerful fighter airplanes, and in July 1945 only one P-40 group remained operational in the AAF. At the end of the P-40's brilliant career, more than 14,000 had been produced for service in the air force of 28 nations.

P-40 Specifications
Size: span 37'4"; length 31'9", height 12'4"
Weight: 9,100 lbs max
Armament: six 50 cal. machine guns; 700 lbs of bombs externally
Engine: Allison V-1710 of 1,150hp
Cost: $45,000
Maximum speed: 362 mph
Cruising speed: 235 mph
Range: 850 miles
Service ceiling: 30,000 feet

The North American P-51, designed and built at the request of England in 1940, initially was not too impressive to the Air Corps because of its limited high-altitude performance. In 1942, however, the British tested a mustang in which a Rolls-Royce "Merlin" engine had been installed. results were most promising.

The AAF decide to purchase Merlin-powered Mustangs and use them for high altitude escort of the B-17s and B-24s. In December 1943, the P-51B flew its first comet mission from England. Meeting Luftwaffe interceptors deep inside Germany territory, the Mustang repeatedly scored heavily over the

enemy
planes.

By the end of WW II, the P-51 had been in practically every active combat zone, including the pacific where it escorted B-29s to Japan from Iwo Jima. With the advent of the Korean Conflict, it was again put into combat primarily
for close support of ground troops.

Approximately 14,000 P-51 were built for the AAF. It was the last UAAF propeller fighter in operation.

P-40 Specifications
Size: span 37", length 32'3", height 13'8"
Weight 13'8"
Armament: six .50 cal machine guns and ten 5" rockets or 1,000 lbs of bombs
Engine: Packard Merlin V-1650 of 1,695 hp
Cost: $45,000
Maximum speed: 443 mph
Cursing speed: 275 mph
Range 1,675 miles
Service ceiling: 41,900 feet

They were great airplanes in their day, but now they are retired.

It is said that with the entry of USA into WW II more then half of all USA licensed hams entered the service to provide vital radio communications, much by Morse code. Even thought 30,000 or more entered the service, it was not enough, and radio teletype was invented to provide major communication circuits.

Morse code was great in its day, now its time to retire it as amateur radio license exam requirement. Technology changes both the design of aircraft and
radio communications.

Pretty neat the way you cribbed the info about the aircraft and
presented it without attribution, Larry. Did you do the same with the
information regarding morse code? Since you are one who doesn't use it,
I'd suspect your information may not be based on first hand knowledge.

I wish to debate the methods used to derive conclusions. You don't want to debate. All you want to do, Len, is call names and repeat the same mistakes over and over.
>
>I believe my math was close enough to be accurate in assessment
>of the classes of licenses both before and after April 15, 2000,
>namely that the New licensees' trend to Technician continues

Your "belief" in something does not make it a fact. I know people who believe in the Easter Bunny, but their belief does not mean I must agree with them.

Everyone knows that most new hams start out as Technicians. Been that way for a long time. I've said it many times. It's a nonissue.

> and that there is no signs of any exodus to increase users on
>amateur HF bands.

Another example of faulty process on your part, Len. You lump together all classes of amateur license with any HF privileges at all, EXCEPT Techncians with HF. But there is a BIG difference between the minimal Novice HF privileges (tiny slices of four HF bands, and only one mode on three of those bands) granted and those of the General and higher classes. (Generals have all privileges on 5 of the 9 HF/MF amateur bands, and the majority of the spectrum in the other 4 bands. And they have all mode privileges. The other classes are even better).

Since the end of March, 2000, the number of US hams with General and higher licenses has jumped by 30,561 - that's 10.5%. Thirty thousand plus new hams on bands/modes they could not use before. That's significant.
>
>That trend is visible to all...except those who do not want to see it.

Nobody denies the first trend. Only you see the second.
>
>>Why? Your work is faulty. That is the issue. I'm not going to do your work

>>"wrong" to point out those mistakes? If so, why?
>
>Sorry, old fly speck, but my analysis is no more "mistaken" after
>restructuring any more than it was "mistaken" before.

It was mistaken before and it is even more mistaken after. Do you still think that all Technicians have no HF privileges, with or without CSCEs? Yes or no?

>You
>DON'T LIKE THE ANALYSIS, therefore you brand the analysis
>"mistaken, faulty, error, etc."

I don't like analysis METHODS that are faulty. Such as counting months twice, which you did. Or ignoring the reclassification of Tech Pluses as Techs upon renewal, which you also did. Or assuming that NO new Technicians upgraded in ten months, which you also did.
>
>What YOU WANT is to keep the status quo as much as possible,
>to keep the Faith in what all Good and Real hams "should" think,
>"must keep" as a "moral" and (even) way of life.

How do you know what I think? Can you read minds? Are you God? I don't think so.

What is really going on is that I have repeatedly shown that your analysis methods are faulty. So rather than correct them, or admit your mistake, or even try to defend them, you attack the messenger.

Textbook ad hominem. Which is faulty logic, too.

>I'm not going to
>do that since the environment is changing, the paradigms are
>changing and evolving.

Buzzwords and bafflegab. Heck, those aren't even current buzzwords and bafflegab. Get with it, Len - "paradigms" is an '80s management buzzword.

>I don't give you twenty cents for your
>paradigms of the olden times.

I didn't ask for it. All I want is answers to simple questions, but you don't give those. Because they are too embarrasing for you.
>
>>Me? Not at all. I'm just pointing out your errors, Len. Your mistakes in
>>logical processes and the handling of these numbers. Real engineers welcome
>>having their work checked. Wannabes are afraid of having their faulty
>methods
>>exposed.
>
>Bullshit.

How? If your numbers and methods are valid, explain and defend them against my critique. Show where MY analysis is faulty. You haven't done that - all you do is edit out my proof of your errors and attack the messenger. Then you toss in some dirty words for some reason or other.

>You are trying to act like Management.

Nope. I'm acting like a real engineer, who wants to see how the conclusions are derived, and who won't accept sloppy thinking and faulty handwaving processes.

Worse yet, I won't be bullied into accepting something because somebody calls me names or uses scatalogical terms.

>You WANT
>certain conclusions and, by Hiram, you are going to get it. :-)

How do you know what I want? Are you God?
>
>The trend of newcomers going to Technician was there before
>restructuring. It continues.

And as I have said dozens of times: NOBODY DENIES THAT!

> Further, against the grain of the
>established ham conservatives, Techs are renewing as Techs.

Most of them. Same as every other class. I've been renewing in the same license class for three decades.

>Such is heresy against Conventional Wisdom (CW) of the
>long-time ham conservatives.

You said that - not me. Why do you deny that ANY of them upgrade?
>
>REAL engineers challenge bad decisions in "open court" of
>design review meetings or by going to other companies.

Not just there. Ever hear of a "checker" in a design office? Or do you think your work is always without error, and does not need to be checked?

This forum serves exactly the purpose of an engineering review. Faulty arguments and processes are exposed for what they are. You can try to shout me

down, but it doesn;t work that way. Reality is absolute. A is A, whether you like it or not. Whether you believe it or not.

> REAL
>engineers don't sit around complacent with state-of-the-art of
>three decades ago or outdated methods.

You mean like SSB?

Real engineers don't fix what ain't broke. Real engineers don't reinvent the wheel. Real engineers don't accept things because somebody else says they "believe" those things.

Real engineers are not bullied.

> Avocations are NOT engineering.

Many of them require engineering. When a ham puts up a tower, it better be engineered correctly, because if it falls down and causes damage, the fact that it's "avocational" doesn't mean a thing.

Same for RF exposure, spurious emissions, compliance with the rules, etc.

> Amateur radio is an avocation.

So? Your attempted diversion does not hide your mistakes or change my arguments against those mistakes.
>
>>No. Your method of using the data is faulty. Your understanding of the AH0A

>>incorrect, invalid. In other words, just plain wrong. As I have shown
>>repeatedly.
>
>All Miccolis has "shown" is a desperation to keep the status quo,
>including keeping all the old myths alive.

Where do you get a nonsequtir like that?

The status quo is now one code test and three written tests. The status quo is now that support for code testing is only kept alive by the treaty requirement. The status quo is that support for that treaty requirement is decreasing. The status quo is that the code test will disappear shortly after the ITU meeting in 2003.

> The status is not quo
>and newcomers are not appreciating the standards and practices
>of three, four, or five decades ago.

They aren't? How many "newcomers" do YOU know? How do you derive such a sweeping statement? From your "beliefs"?

> Miccolis is in denial of the obvious.

Not me. You're the one denying the obvious, like 7079 Tech Pluses renewed as Techs since April 15, 2000.

>
>>>If the data shows trends away from what "should be" or
>>>what is urban myth, then the data and everything about it
>>>is "faulty." :-)
>>
>>That is YOUR philosophy, Len, not mine.
>
>The hell it isn't. :-)

Exactly. "The hell it isn't" means "IT SURE IS!" Thanks for confirming what I said.

(Proof: If A says "X is a good brand of widget" and B says "the hell it is!" then B is disagreeing with A. Common English usage.
So if B says "the hell it isn't!", B is AGREEING with A.
QED)

>>I'm an engineer. Engineers deal with facts and reality, not myths. Real
>>engineers don't just shuffle numbers - we know what those numbers mean,
>their
>>accuracy, and how they were derived.
>
>Geez. A rather pompous way of trying to say Miccolis is the only
>one correct. :-)

No. A simple way of saying you don't know what you're talking about. Pomposity I leave to the experts in that field - like you, Len.
>
>REAL engineers deal with facts, reality, environment, social climates,
>public opinion, quality, and, certainly, some numbers. Lots of the
>things that begin an engineering project developement aren't Divine

>able to deal with change and changes.

I know. That's what I do every working day. You just described me to a T.
>
>The amateur radio Beliefs that you subscribed to three decades ago
>have changed, are changing.

Nobody denies that, least of all me. Why do you spend so much bandwidth repeating the obvious, Len?

>Right about now one out of three US
>radio amateurs are Technician class. The vast majority of that
>class has not taken any morse code test

Ahhhh - BUT SOME OF THEM HAVE! At least 7079 of them, and probaly many more. Which means they are NOT all "noncodetested" or "non-HF licensees".

>and it doesn't appear likely that they wish to do so.

Pure wish-fulfillment and speculation on your part, Len. Nothing else. You don't know how many have taken the code test, so you ASSUME nobody has. You deny the stated proof that thousands have taken the test.

If all someone wants from amateur radio is VHF/UHF, there is absolutely NO reason to upgrade beyond Technician. Nothing wrong with that. If someone is willing to wait until 2004 or so, there's no reason to take the test, either.

> The FCC said 11 years ago that it
>did not consider morse code testing to be useful to them as
>indicating anything useful for licensing. It repeated that one and
>a half years ago.

Of course. That's what they said. So? They said that 4 license classes was the best thing for ham radio in the NPRM, then dropped it to 3 in the R&O. They had to issue an errata to the NPRM, and the errata had mistakes in it. They say all kinds of things.

> Long-time conservative hams are still stuck in
>their time-warp of "knowing what is best for newcomers" when all
>they are doing is making newcomers do the same as they did...for
>no reason other than making them go through a Hazing Ritual.

What the heck are you babbling about?

Is it wrongthink to disagree with The Commission? Are they infallible?
>
>Newcomers aren't buying the old Belief set. They shouldn't.

Uh huh. Instead, they should buy YOUR "belief set", founded on hate of anything that you don't like.

Who are you to tell newcomers what to believe? You can't even defend your own analysis processes here.

Try admitting your mistakes instead of attacking the messenger.

Dick was only pointing out the truth that you fail to accept because you prefer to live with your head stuck in a hole in the ground... or up your ass.

I just found out the league is going to push to remove all code requirements at the next international meeting. It's just the next step in their continuing efforts to dumb things down.

Soon, the only difference between a ham and a CB'er will be a piece of paper. Our bands sound more like 11 meters everyday.

Don't buy a League membership people if you value this radio service, that's possibly a better idea than sueing them.

> a hobby, like CB, just to screw around with.
> [snip] I even turned in a couple guys who were
> operating on calling and distress frequencies,
> and nothing was ever done. [snip]

You're right, it does happen all the time. And its costing taxpayers, such as yourself, millions of dollars each year. In just one Coast Guard district (District 13, Pacific NW), there were over 400 false distress calls in 1999 alone, each resulting in a response from the Coast Guard (at a average cost of $2800 each incident). And there are 13 other districts with nearly the same number of false distress calls. Do the math. That is what all those illegal operators are costing taxpayers.

But that is just the financial cost. Even more important is the potential human cost. Any one of those false distress calls could result in young men and women putting their lives on the line in dangerous weather conditions (our Coast Guard must respond to all distress calls - even those which eventually turn out to be false). And each word uttered by those marine radio "CB'ers" has the potential to interfere with critical communications involving navigation or distress.

And, you're also right, there is not enough enforcement. But why should it require government enforcement for people to understand what they're doing is not wise? Why do people care so little about the welfare of others - so little it requires government enforcement before they're willing to do the right thing?

And, while there certainly is not enough enforcement, that is not to say there is no enforcement. Like I said earlier, if the actions of these people result in the loss of life or property, they will find out very quickly that enforcement does indeed exist. It is just sad that it often takes the loss of life or property before these people realize the consequences of their actions.

I get very angry when I'm out on my boat and hear someone using a marine radio illegally. Not because I'm some do-gooder out to control others. But because I know that my safety, and the safety of my family or anyone else on that boat, depends on that radio when something goes wrong. I simply cannot understand why these people would be willing to risk the safety of my others just so they can play on the radio.

Dwight:

I'll explain it for you, then. It is the instant gratification and the rush of
personal power that comes from projecting a part of yourself (your voice)
over a long distance. I used to get this same effect when I used HF
phone. The difference is that I could control myself, and operate
completely within the rules. When it became obvious that people
who wern't as personally invested in the hobby as I was were willing
to make trash of the airwaves, that's when I gave up the microphone.

If the Marine VHF band is being trashed, then Riley and his
counterparts who have control over that service need to get out there
and make some pretty severe examples out of the worst offenders --
and do it quick.

>for an Amatuer Radio license too.

I disagree with you, Steve; I do not think that the Amateur Radio Service
should stop being a learning tool.

Now, as to your MIT analogy, first, I don't believe that you obtained an MIT
degree for a boxtop and an addressed envelope. Can you post some details?

Second, do you think that MIT should award a degree to someone who did not pass
his or her exams if he or she worked really hard at trying?

It is not a matter of work, it is a matter of meeting the requirements.
Whether someone did so easily or with great difficultly cannot be measured.

>on IMPOTENCE. Sorry, little girl, I do not have that or even
>expect that. However, considering the number of times nursie
>has written it, she is probably post-menopausal.

And it seems that you are particularly affected by the insinuation of it, ergo I must have hit a resonant chord. Not that I doubted it. Most men in your situation do one of two things...they cower and withdraw from society, or they redirect their frustration at a third party.

Unfortunately in this case, WE are the third party.

>No. I said "virtually expire." For all intents and purposes, a
>commercial radiotelephone license has little need in US
>commercial radio. It is not a necessity for me being retired.

That's NOT what you said, but if you think it let's you dodge the facts, I guess it makes you feel better. And according to YOUR words, you are still working in the profession.

>False. Nursie will come on again with the "necessity" to take an
>amatuer radio examination in order to "appreciate it" or show
>"dedication" and personal resolve.

Nope. I reiterate that YOU are UNABLE to make an INFORMED opinion on present day Amatuer Radio activities in as much as you (by YOUR admission) do not subscribe to current Amateur periodicals, nor are you active in Amatuer activites or programs.

Your SOLE "exposure" to Amatuer Radio is your ranitngs in this newsgripe and your failed writing career in a long-since-failed Amateur magazine. You profess such initmate working knowledge of rules and regulations yet in a currently running thread with Hans you acknowledge that you are not "subscribed" to the FCC's "Daily Digest", a service that exisits for the very purpose of keeping people abreast of radio regulatory matters.

Not very timely, are you?

>Nursie wants to roll around in the mud of personal pejoratives yet
>cannot bring herself to consider that a First Phone was a license
>examination at an FCC office in Chicago, March 1955.

Sure it was. But it was not then nor is it now an Amatuer Radio examination. That test, now over 46 years old, still does not imbue you with any special knowledge or experience in matters pertaining to the Amatuer Radio service beyond the relative theoretical topics.

>Nursie can only mud-wrestle.

Ever been to a mudwrestling show, Lennie? You see who wrestles? You think I have a problem getting in the mud with them...?!?!

>Nursie is a prime example of a US Extra class amateur radio
>licensee.

A perjorative of your own, Lennie.

Lennie is a prime example of all EE's, however I know a few other Anderson's and thankfully they are a bit more rational and mature.

A LOT more mature.

Lockheed P-38 lighting

The lighting was designed in 1973 as a high altitude interceptor. The first one built, the XP-38, made its public debut on February 11, 1939 by flying from California to New York in seven hours. because of its unorthodox design, the airplane experienced "growing pains" and required several years to perfect in for combat. late in 1942, it went into large-scale operations during the North African campaign where the German Luftwaffe named it "Der Gabelschwanz Tuefel" or "The Forked-tail Devil".

equipped with droppable fuel tanks under its wings, the P38 was used extensively as a long-range escort fighter and saw action in practically every major combat area of the world. It was also used types of missions as dive bombing, level bombing, ground strafing, and photo reconnaissance.

By the end of production in 1945, 9,923 had been built.

P-38 Specifications
Size: span 52', length 37'10", height 12'10"
Weight: 17,500 lbs loaded
Armament: One 20 mm cannon and four .50 cal machine guns.
Also could carry ten 5" rockets or 4,000 lbs bombs.
Engines: Two Allison V-1710s of 1,475 hp each
Cost: $115,000
Maximum speed: 414mph
Cursing speed:275mph
Range: 1,100 miles
Service ceiling: 40,000 feet

>Ham CW will die years after the FAA lifts the
> airworthiness cetificate of the last P-51D.

The FCC has not pulled the type acceptance on old
commercial transmitter or barred amateur from building
the own either. No one is asking or expects CW to die.
The Morse code exam requirement is unnecessary,
not in the public interest, and not in conformity
with 5 USC 706.

>Really?? And they first actually flown in combat didn't appear in the
>skies till 1943.

Jonathan, you'll have to forgive Lennie the Loser. You see, Lennie was an electronics technician at one time but is now retired in Southern California. He has nothing but time on his hands to make these posts. If you follow most of his posts, you will find a handful at one time with the same Date/time group on them. Lennie spends hours off-line then dumps his tripe like a bag load of unwanted kittens along the highway in one download.

He once wrote some pieces for a ham radio magazine that went out of circulation almost 2 decades ago, yet Lennie has never let go of the fact that Amatuer Radio as a whole did not embrace HIS wisdom and HIS leadership over the "unwashed masses" of John Q. Citizen Amateur Radio Operators.

The point was made by you several times that the Mustang was NOT in service at the beginning of the war. Lennie felt it necessary to exert some sort of "expertise" by regaling us with the registration numbers of the Mustang prototypes and NAA/Rockwell ownership history.

None of it was pertinent, but it made Lennie feel like he was once again showing his superior knowledge of night-school educated electronics technicians over mere mortal Amatuer Radio operators.

>So, no points for you, although you
>can obviously cut and paste from reference materials very well, and for
>that you get a gold star

That he does well. Lennie can "hang ten" on the Internet "surf" with the most of them. Too bad that with all that information at his fingertips, common little facts are always tripping up his rants.

>Aren't you the guy who is infatuated with Nazi Germany?? You seem to
>refer to them a lot. Well, no use for you that's for sure.

Lennie can't "pontificate" without downgrading or humilating others. The ultimate humiliation (or attempt at it, anyway) is to make analogies with such vile vermin as the nazis. Only in such a manner can Lennie make any headway.

>of the classes of licenses both before and after April 15, 2000,
>namely that the New licensees' trend to Technician continues and
>that there is no signs of any exodus to increase users on
>amateur HF bands.

"Close enough" only counts for horseshoes, hand grenades, and nuclear weapons.

Your's was no more than an estimation.

"Exodus"...??? I believe most hav said before and say now that the "Restructuring" was not going to significantly bolster Amatuer Radio at ANY level.

Indeed, the same "surge" that followed "Novice Enhancement" and "Codeless Technician" followed the "Restructuring" event, but it has already started to ebb.

>Sorry, old fly speck, but my analysis is no more "mistaken" after
>restructuring any more than it was "mistaken" before.

Hmmmm......Jim has not, to my knowledge, made any "old fly speck" type comments vis-a-vis Lennie, but here we have Lennie invoking the "perjorative" factor.

In a week he'll be asserting that HE is the victim and HE would never do anything like that.

Yeah....right.

>What YOU WANT is to keep the status quo as much as possible,
>to keep the Faith in what all Good and Real hams "should" think,
>"must keep" as a "moral" and (even) way of life.

No, that's not "what he wants', as his countless other posts have made evident. It's what YOU want to believe, though, as that and ONLY that would substantiate you lying.

>I'm not going to
>do that since the environment is changing, the paradigms are
>changing and evolving. I don't give you twenty cents for your
>paradigms of the olden times.

Yes, things are (always) changing. But your assertion that Jim wants things to stay "status quo" are foolish. Not unexpected, but nonetheless foolish.

>Bullshit.

Lennie is reminded that his posts are a prime example of EE technicians everywhere.

>You are trying to act like Management. You WANT
>certain conclusions and, by Hiram, you are going to get it.

And YOU don't? HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! !

>The trend of newcomers going to Technician was there before
>restructuring. It continues.

Hmmm....given the facts that the Technician conveys almost all Amatuer priviledges anyway, this is unusual....WHY...?!?!

>REAL engineers challenge bad decisions in "open court" of
>design review meetings or by going to other companies.

Oooops...here we go again..."REAL" engineers and why they are soooooooo much more well equipped to be "us".

>Avocations are NOT engineering.

More proof positive that Lennie the Licenseless is NOT any kind of an engineer. Speaking in "Absolutes".

One cannot persue engineering pursuits as an "avocation"...???

>All Miccolis has "shown" is a desperation to keep the status quo,
>including keeping all the old myths alive.

And all you can do is assert that others are trying to keep undefined "myths" alive, NOT render scientific or mathematical facts.

>Geez. A rather pompous way of trying to say Miccolis is the only
>one correct.

Kinda like how YOU assert that YOU are always correct?

Yeah...RIGHT.

>REAL engineers deal with facts, reality, environment, social climates,
>public opinion, quality, and, certainly, some numbers.

Which again leaves any engineering credentials that you may have or claim to have in doubt. You pretty much ignore all of those in favor of your unfounded rants.

> Lots of the
>things that begin an engineering project developement aren't Divine
>or cast in everlasting cement.

A strange comment, coming from someone who routinely exerts "absolutes"
when trying to make HIS point.

>Long-time conservative hams are still stuck in
>their time-warp of "knowing what is best for newcomers" when all
>they are doing is making newcomers do the same as they did...for
>no reason other than making them go through a Hazing Ritual.

Another lie repeated for perpetuations sake.

Those of us who are INVOLVED in REAL Amateur Radio know better.

UNLIKE Lennie the Licenseless Anderson.

>Buzzwords and bafflegab. Heck, those aren't even current buzzwords and
>bafflegab. Get with it, Len - "paradigms" is an '80s management buzzword.

Of course it is, Jim. When one reviews most of Lennie's "experience", it seems to conclude in "1980-something", and certainly not past early 1990's. It's "Y2K and then some", but the march of time does not affect the static mind.

>Real engineers are not bullied.

But is would appear that some people alledging to BE "real engineers" are. Lennie, in particular.

>Nobody denies that, least of all me. Why do you spend so much bandwidth
>repeating the obvious, Len?

Because someone once said that a lie oft repeated is soon accepted as truth. Lennie believes that. He lives it. He prays for it to be true.

>Try admitting your mistakes instead of attacking the messenger.

Oh yeah...like THAT would happen!

I have noticed that everything Lenn posts is ancient history. I had a
neighbor (he has since passed on). No matter what we talked about, he
had to regale us with some history lesson that he personally was involved
in. If memory serves, he was there to advise Lindbergh on his trans-
Atlantic flight :-). After awhile we just nodded and smiled are realized
there are those that can't let loose of the past because they have no
present and certainly no future. Our Upsyoursfurher Anderschmidt is the
poster boy for the "In my days" crowd.

Lenn never seems to let facts get in the way of a good cut and paste
item.

BTW, I'll be a Dayton. Have a booth, actually 2 in the upper corner of
the outdoor flea market. Nothing really for sale, but it's a great
parking spot and you don;t have to walk to far to bring some purchases
back to the car.

I'm looking forward to meeting the Lenn at his home QTH. Made the flight
reservations from McCarren to LAX, although I am tempted to fly into one
of the surrounding smaller airports on my own. I went out and bought a
new digital Video camera. Fits in the palm of one hand. I plan on
recording this meeting. Vegas odd are 3 to 5 on LennieNoShow

Does learning the morse code make one more considerate of others? Does it teach one how to limit his or her bandwidth? Does it impress the proper procedure for voice identification or how to handle emergency procedures?

I have had an extra class license since about 1970 and been a ham since 1958. I checked one day and all of the trash talking, rude and obnoxious guys on 20 and 75 meters had general class or higher licenses - that was before the FCC "dumbed" down.

Many of the biggest jerks had extra class licenses and assumed they were better than everyone else.

Many of the codeless tech's I talk to on 2 meters are caring, considerate, thirsting for knowledge and participate in public service events - which is the justification for our existence.

Seems like the biggest threat to ham radio are not the newcomers - but the old guys who still know morse code - which I am.

yodoc@aol.comnospam (Larry Roll K3LT)
shared these priceless pearls of wisdom:

->If the Marine VHF band is being trashed, then Riley and his
->counterparts who have control over that service need to get out there
->and make some pretty severe examples out of the worst offenders --
->and do it quick.

Larry --

Before you do that, it might be well to get the attention of the anal retentives in the FCC that assign certain frequencies to certain operations. We have the same problem in the aircraft band -- 760 permissible channels and ONE assigned to "incidental communications", 122.75. That sucker is so crowded on a nice weekend that some operators take the law into their own hands and go the "good buddy" route on 123.4 and 123.45 which just drives the legitimate users of these frequencies (flight test stations) up the wall.

Not being that well versed in 80.373, I don't know if there is a legal "incidental" channel where you can talk about almost anything that you thinks needs saying, but there certainly needs to be one or two. You may not think idle chatter about whether the 49ers are going to beat the Jets this weekend is subject matter for "serious" radio, but others do.

Understand what I say -- I do not advocate turning one channel or group of channels into a garbage-mouth situation, but unless there are well-defined "incidental" channels that one can legitimately use for party-line gab, the whole band gets thrashed.

If Riley wants to nail some bastard that is setting off the emergency channels, I'm all for it. But first we give the ratchetjaws some legitimate place to go.

> and not some guy named jim perry. its either leland or doug.

Funny comment coming from a self admitted CB Radio pirate operator. A quick check of your past posting history would establish that little fact without a doubt Tim. Your web page boasting about your activities got changed. Looks like you can't take the heat or are you just a wee bit worried about getting busted? You also forgot to remove references to "Knight Patrol #82", a CB Radio organization which sanctions illegal operations on 11m, which also helps to cast doubt on your creditability too.

I also put the question to you about bootlegging on the Ham H.F. bands several times, since your old web page clearly showed you were operating a modified Yeasu FT-840 rig. Yes your old web page got posted here as an example of a pirate CB operator so you can't claim your are not. You never did answer that question publicly. So whose, or what, call sign(s) were you spoofing when operating without a proper license on our bands?

Some months back you were also making inquires, on the CB news group, in to operating on the so called "Echo Charlie" frequencies too. If you have operated there you most likely have been else where too. Band plans, licenses, and Part 95 rules don't mean a thing to you. Did you also forget about your posts some weeks back asking about a mobile amplifier to go with a mobile CB rig you wanted? So you have the nerve to show up in a group of people, who play by the rules and operate within the limits of their license, and want to complain about some people who take you to take task for your self admitted illegal operations. Get real. I don't know and I don't care who is the responsible party(s) for the rash of forged posts in the other news group, but the criticism you get is well deserved.

The biggest threats to ham radio have nothing to do with Morse code. They are spectrum threats, RFI, tower ordinances and similar things.

Even in this context, it is not knowing, or not knowing, code that drives the old timers and newcomers alike to demean each other. Fortunately, most newcomers learn pretty quickly not to follow the lead of those who would drag down ham radio.

>membership has the right to know how the directors voted. We are not
>three-year-old children who need to have the truth hidden from us "for
>our own good".

The ARRL-Bashers are again in full spring bloom!

A few inbred UnaBashers regularly show up here bashing ARRL, CQ,
Morse Code, CB, Wayne Green, Technicians, Extras, CW, or some
other random subject or group that pissed them off this morning.

Most of us view them with some level of disdain, but others
view them with admiration and would like to emulate them. For
those who'd like to refine their bashing efforts, I thought
I'd post some rules that they (or you) could follow to become
a really 599+, full gallon, state-of-the-art UnaBasher.

Rules for Successful Bashing -

1. Be anonymous like W2DNE. Most of us know who you are anyhow, but
you'll impress Twistedhed and KC8JBO, and piss off Steve to no end.
2. Use 10% fact. 90% suggestion. The facts will lend credibility
to your unfounded suggestions.
3. Use a lot of macho-meaningless tag-lines like "An America Not Preapred
For War In Peacetime Will Not Know Peace In Any Time." It will get
you the knee-jerk-redneck vote, especially if you can't spell all
that well.
4. Use two or more aliases to simulate a discussion. But be careful,
the 'pit bull' tries this, but is always betrayed because all
his messages come from the same IP address. Now he's discredited and
gone.
5. Identify the "gurus" on the newsgroup and suck up to them.
6. Give the appearance of being open minded.
7. Be bold in your statements. Dummy newbies follow strength.
8. Write headlines in caps with catchy statements.
9. Don't worry about being labeled a "Basher". Newbies won't
know your history.
10. When identified put up a brief fight, then back off. Return
in a week unless your foe is a weak in reasoning powers.
11. Form your bash as a question, not a statement. Like
"Does ARRL hate technology?", or "Why can't most Extras
figure out Ohms law?" People can refute your
statement, but nobody can answer such dumb questions.

12. Highlight a lot of credentials totally unrelated to the subject.
For example "NASA Certified Solderer" in a nursing topic, or
"LPN" in a radio topic.
13. Bait the target into personal debates putting their
focus/efforts on you and not the facts. Divert their
attention from facts. Facts are your enemy.
14. Do not fall for challenges on the truth of what
you are saying. Bashing is a game and you are playing
it with your own rules. Ignore embarrassing questions
which betray your lack of research, or call the questioner
a Nazi or a liar. (See Anderson and Robeson for
instruction.)

Your are a:

Grade "B" UnaBasher:
If you post lots of old news, respond to all positive posts with a
negative side. Never respond to being called a Basher.

Grade "C" UnaBasher:
Very good way with words, always claims to be your "friend" taking the
positive poster into confidence, sucks up, and then uses the
relationship to bash somebody else.

Grade "D" UnaBasher:
Needs to learn the basics about being convincing when making a
negative statement. Has no anonimity whatsoever, and tends to
use quotations of others (preferably of dead people), rather
than original thinking to make their point.

Grade "F" UnaBasher:
A complete idiot, most readers are not convinced he knows
anything about amateur radio in general, let alone the current
topic of conversation. The type that says something "sucks", but gives
no rationale, shows up every so often but no regular schedule.

Most of the conversations about the exams seem to emphasize the "work" aspect of the value of the test material, not the learning aspect. You chose the word "work," not the word "learning." The difference between the two is more than "semantics." If words don't mean what words mean, what do they mean?

>WOULD I do it...?!?! In a minute! It's a matter of "what would you do
>to obtain something you valued"...???

I do not believe that today, starting from scratch, I would learn Morse code to 20 wpm to obtain an Extra Class license. I can think of many other things I would not do to obtain a license.

And all that aside, the value to me of the things I have done with the license I was given has exceeded the value to me of the tests I took to get that license.

Unfortunately for you, the FCC was no one of those "others".

The FCC stated in its Report and Order (FCC 99-142) for WT Docket #98-143
that:

(a) "the public interest will best be served by reducing the telegraphy
examination requirement to the minimum requirement that we have found that
meets the Radio Regulations" ;

(b) "an individual's ability to demonstrate increased Morse code proficiency
is not necessarily indicative of that individual's ability to contribute to
the advancement of the radio art" ;

(c) "such a license qualification rule [Morse code exam] is not in
furtherance of the purpose of the amateur service and we do not believe that
it continues to serve a regulatory purpose" ;

(d) "the amateur service is fundamentally a technical service, the emphasis
on Morse code proficiency as a licensing requirement does not comport with
the basis and purpose of the service" ;

(e) "reducing the emphasis on telegraphy proficiency as a licensing
requirement will allow the amateur service to, as it has in the past,
attract technically inclined persons, particularly the youth of our country,
and encourage them to learn and to prepare themselves in the areas where the
United States needs expertise" ; and

(f) "telegraphy proficiency is not a significant factor in determining an
individual's ability to provide or be prepared to provide emergency
communications" .

Please point to ANY federal licensing requirement that directly
or indirectly addresses any need for the applicant to expend
"work" to obtain the license. Work, as a product of itself,
is not now nor has it ever been an amateur licensing
criteria.

Cheers,
Bill K2UNK

As usual, another fact that is inaccurate.
The league vote was to NOT oppose an effort to remove all
code requirements. The league did NOT vote to proactively
seek (i.e. push) such a change.

A good citizen is expected to report crimes when he/she witnesses them.
In some cases it's a crime not to.
I'm sure the freeband criminals would prefer we didn't.

They were volunteers but they were not off-the-street civilians nor
were they mercenaries in the usual sense. They were hand-picked by the
USAAF brass as some of the best of the best of our active-duty fighter
jocks, they were ceremonially excused on paper from the USAAF and
shipped out to serve in the Chinese Air Force. They became USAAF
pilots again when the U.S. finally joined the batle in SE Asia. Mild
scam with a justifuable purpose.
>
I have a cousin who was developing infrared and stereo
photo-reconniasance methods before the U.S. got into the war. The
Brits dressed him up as an RAF recon officer. He flew some large
number of combat missions over Nazi Germany in Lancasters long before
Pearl. We had a lotta guys under fire before Pearl.

There already are plenty of legitimate places for those "ratchetjaws" to go, Jim. What about CB, GMRS, and so forth? There are dozens of frequencies just sitting there waiting for people who want to run their mouths. It is absurd to suggest that space should also be made available in the aircraft bands, or the marine bands, for those very same people. Those bands (marine and air) were not designed for "ratchetjaws," while those other bands (CB, GMRS, etc) were. In fact, if we're going to set aside a few dozen frequencies on each band for "ratchetjaws," then why even have bands like CB, GMRS, and so on?

Dwight Stewart (W5NET)

Dwight,

While it is not *exactly* the same thing, but I wonder how much time
and money is spent responding to accidental activations of EPIRBS?
As you likely know, we (CAP) spend an inordinate amount of time respond-
ing to ELTs that turn out to be the result of, perhaps, a hard landing.
Like the false distress calls, each one must be responded to and dealt
with under the assumption that it is the real thing.

It escapes me why people think that calling out a false Mayday is funny.
Illegal operations *should* be a concern of everybody.

The acquisition of technical knowledge represents work, whether the
applicant got it in some career training program or in selfstudy of
technical material for the purpose of amateur license testing. Unless,
of course, he just studies the pools for the word associations. Then it
is memory work.

I remain skeptical. Of course my version of the Easter Bunny may be different
from yours.

> I bought one for my grandson.

That's not the one I meant. Does it leave eggs?

>Did you know
>that Easter is an ancient pagan German fertility goddess?

My information is that the word "easter" derives from "eo-star", a northern
European spring fertility festival. We may be saying the same thing two
different ways.

Many of the symbols and customs surrounding Christian holidays have their
origins in pagan rites. The eggs, chicks, bunnies and other Easter symbols are
right out of spring fertility festivals. The Yule log and Christmas tree have
similar origins.

When Constantine, for whatever reason, made Christianity official lots of things got co-opted. Imagine the local version of Father Emil down at Our Lady of Perpetual Responsibility a Sunday or two after Connie dropped the bomb. 'You got an Earth Mother, padre?'

Taking the easy path of co-opting the locals is probably the only way to get the job done. But it does confuse hell out later generations. Given that Halloween is now second only to Christmas for selling stuff, maybe later generations deserve it.

Jim:

I do not disagree with this philosophy. I've long held that there needs
to be adequate, if not abundant, spectrum available for what you so
accurately describe as "incidental" communications. Having said that,
I must admit that I am not, and never have been, a Marine VHF user,
but I thought there *was* adequate channel space for incidental comms.
I know that there are dedicated channels for emergencies and ship-to-
shore phone patches, and I believe that *any* deliberate interference
on these channels should be adequately policed. I'm just surprised
that such an important service *isn't* being adequately policed. In my
own town (Dover, DE) I've seen several vehicles (not boats) equipped
with the distinctive antennae used in Marine VHF. These are
vehicles that don't even have a trailer hitch on them! I'm sure that
this band is being systematically bootlegged by CB'ers seeking a
cleaner, clearer, quieter venue for their activities.

I think its time to provide "fill in the application blank" type of access
to the amateur 2m, 220, and 440 bands. There's no longer any point in
maintaining the fatuous farce of license testing for these frequencies,
which are almost totally dominated by off-the-shelf handie-toys and
plug-and-play mobile rigs, and operators who can barely comprehend
the PTT switch, much less the operational theory behind them. GMRS
isn't the answer because the repeater infrastructure isn't there. I
exclude 6m from give-away licensing merely because it has many
of the properties of 11 meters, namely reliable global propagation,
which deserves the protection of more rigorous license examinations.
I exclude 1.2 GHz and up because of the greater physical hazard
of high power RF at those ranges which would require a more
technically qualified user to prevent overexposure. Opening up the
"mid-range" V/UHF bands would give the general public all the
opportunity they needed to push a mic button and talk; and since
they'd be licensed, required to use call signs, etc. there is still the
enforcement sword hanging over their heads, unlike 11-meters.

We've already reduced amateur license testing to the status of a
joke; so why not get a real laugh and give the microphone jockeys

their dream-come-true?

Ed:

I find it interesting that whenever a pro-coder tells the truth about the Morse code itself, those who use and enjoy it, or those who couldn't be bothered to learn it, they are immediately faced with a chorus of accusations such as the above. In the meantime, the fact that the no-coders have heaped plenty of gratuitous abuse on the pro-coders is conveniently overlooked. Like all liberal, socialist Communists, the NCTA adheres to a strict double standard.

> Fortunately, most of us who love and enjoy Morse code are able to point out
> that such conduct is not a result of the "hard work" that you put into learning
> the code; it is a personal choice that, fortunately, most hams do not take.

The truth is, learning the Morse code really isn't "hard work" at all. It is just something which doesn't provide the same level of instant gratification that comes from the voice modes. This unwillingness to defer gratification -- the unwillingness to invest the time and dedication required to gain a valuable communications skill -- demonstrates a lack of intellectual maturity on the part of the NCTA. Unfortunately, new hams coming into the service after Restructuring have no option but to be painted with the brush created by the lazy majority who whined for, and received, lowered licensing standards.

This is the "English" language, Ed. Even the "f" word can have a dozen different applications, depending on the context of the conversation and the frustration or anger of the person uttering the word.

>I do not believe that today, starting from scratch, I would learn Morse code
>to 20 wpm to obtain an Extra Class license. I can think of many other things
I
>would not do to obtain a license.

You don't HAVE to get to 20WPM now, Ed, ergo it's moot. However if I HAD to do these things to get a license or STAY licensed, I certainly would.

As Lennie the Least would say...."Your mileage may vary".

>And all that aside, the value to me of the things I have done with the
>license I was given has exceeded the value to me of the tests I took to get
that
>license.

Then WHY would you NOT do the things necessary to obtain one today? There are precious few things in life anymore that exceed our expectations or give more than we put in. I would think this would be a "no brainer"...???

No replacement is necessary to delete a regulation that is
unnecessary, not in the public interest,and not in conformity
with 5 USC 706. The Morse code test rule is invalid, but exist
only because of ITU rule S25.5 and government inertia.

In this case, the 'Morse' issue had nothing to do with what was "in the public interest," ad infinitum. Easing of requirements, code and theory, was the issue, and was a done deal before the proceedings even started. As Vic Clark initially warned in 1982, and as the FCC showed with their R&O. Much to the surprise of those who simply thought this was just a 'code' issue.

"And the FCC cheerfully furnished the required rope."

>"incidental" channel where you can talk about almost anything that you thinks
>needs saying, but there certainly needs to be one or two.
>
Only Marine Channel 16 is sacred but not even close to being as sacred
as 121.50. Marine 16 is both the emergency channel and the general
calling channel. Estabish contact on 16 and take it somewhere else
quick. Things get pretty "loosey goosey" from there. There are some
CG, general gov't and phone service freqs which need to be avoided.
Not really much in common with airband ops. Boats doan need to tune a
neighborhood CG clearance delivery freq to find out when it's their
turn to shove off from the dock and get undeway. There's a lot less
traffic and the operating radius in much smaller.

> You may not think
>idle chatter about whether the 49ers are going to beat the Jets this weekend is

I don't know any freebanders, Dick. If I did, I would try to recruit
them to ham radio. I regularly try to recruit the local high schooler
CBers to ham radio and donate my QSTs to the high school library. You,
OTOH, seem to want to keep non-hams out of ham radio so your share of
the sandbox will be bigger.

Vic Clark probably also thought that automobiles would get faster
and more efficient thus obsoleting the 1982 models. What he was
predicting was scientific progress. While all other forms of electronic
communications were getting easier and more accessible, freezing the
amateur radio requirements would have been a sure way to sound the ARS
death knell and bury it in the sands of time. Why not just require radio
amateurs to use tubes and prohibit them from using transistors - same thing.

Nobody is objecting to the truth, Larry. We are objecting to the abusive
ad hominem attacks, e.g., being called a "baldfaced liar".

.....
>We've already reduced amateur license testing to the status of a
>joke; so why not get a real laugh and give the microphone jockeys
>their dream-come-true?

That's tantamount to letting the camel put his nose in the tent.

An Arab was out on the desert with his camel. He saw a huge sand storm coming. He made the camel lie down and then erected his tent so he could be out of the flying sand and the harsh wind. The camel stuck his nose under the flap of the tent and said "Oh, Master. I can hardly breathe with all of this sand and wind. May I put my nose inside the tent so I can breathe?" The Arab was a kindly person and allowed the camel to put his nose in the tent. During the night, the Arab awakened to find that he was being crushed by the camel. He kicked the camel and tried to make himself comfortable. After a while the camel said "Oh, Master, If thou art crowded, thou canst leave".

>The ARRL-Bashers are again in full spring bloom!

Yes, they are. Some of them are not as apparent as others, though.

>1. Be anonymous like W2DNE. Most of us know who you are anyhow, but
> you'll impress Twistedhed and KC8JBO, and piss off Steve to no end.

Or you can be "known" like Hans. Hans has a nasty habit of making snide
and rude comments about others even though things are done for him on a
"personal courtesy" basis. Like responding to his "eQSL" submissions because
you "know" him, and then take flak over it because you make it known you prefer
not to.

Hans is selfish that way.

Then you can use ISP's which won't allow anyone to reply to you via e
mail, but then load up OTHERS mail boxes with YOUR responses...just like Hans.

>3. Use a lot of macho-meaningless tag-lines like "An America Not Preapred
> For War In Peacetime Will Not Know Peace In Any Time." It will get
> you the knee-jerk-redneck vote, especially if you can't spell all
> that well.

Meaningless to you, Hans, because you only marked time until retirement.
Some of us actually had to do something that WAS meaningful while we served.

>6. Give the appearance of being open minded.

Kinda like Hans. But then Hans is two faced anyway and we take that into
account.

>12. Highlight a lot of credentials totally unrelated to the subject.
> For example "NASA Certified Solderer" in a nursing topic, or
> "LPN" in a radio topic.

I guess we can reload "signature lines" for each and every NG we
participate in just to please Hans, but then why? Hans is not worth THAT much
effort. Matter of fact, he's hardly worth THIS effort, but again, he expects
it so who am I to deny him his happiness?

>13. Bait the target into personal debates putting their
> focus/efforts on you and not the facts. Divert their
> attention from facts. Facts are your enemy

Kinda like Hans is doing with THIS post, or the "Little Guppy" one he wrote for my benefit.

Just Like his mentor, Lennie the Liar Anderson, Hans has a real bad habit of applying the "Do What I Say, Not What I Do" twist.

>4. Do not fall for challenges on the truth of what
> you are saying. Bashing is a game and you are playing
> it with your own rules. Ignore embarrassing questions
> which betray your lack of research, or call the questioner
> a Nazi or a liar. (See Anderson and Robeson for

And Hans nis challenged to prove that my assertions of Lennie's lying are NOT true.

>Grade "C" UnaBasher:
>Very good way with words, always claims to be your "friend" taking the
>positive poster into confidence, sucks up, and then uses the
>relationship to bash somebody else.

Yeah...I'd give you a "c" with some conditions, Hans...but it would be a bit shaky.

>If this or other posts made through NewsOne.Net violate posting guidelines,
email >abuse@newsone.net

Close, but no cigar....but it's a thought.

No 73 for Hans.

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

> Uhhhh...yeah, OK Cecil...whatever you say.

People used to get their exercise hunting and gathering while trying not to starve to death and not get eaten themselves. Now we get most of our exercise by having fun. We have become so efficient in meeting our needs with so little effort that we have lots more leisure time. I have *always* believed in working SMARTER, not HARDER. Most Americans are working smarter than their grandparents, not harder than their grandparents. When I was born, my Dad was working 12 hours a day for one dollar per day. I am a lot lazier than my Dad. My stock options at Intel were much easier and more efficient.

>From: Hans k0hb@qwest.net
>Date: 04/16/01 1:52 PM Eastern Daylight Time

>> ....invoking the "perjorative" factor.

>Hell, Steve, you can't even *spell* "pejorative"!

Thanks for the proof read, Hans. I guess some of us have more time on our hands than others.

>Most everyone in the BSA can splell "prepared", but apparently not everyone
>in the USMC. It figures!

But...but...but HANS! You are the one who has repeatedly denied any USMC/USN "conflict" and yet here you are perpetuating it.

And by the way...if I were going to "zing" someone in a newsgroup posting about erroneous spelling or grammar, I think I would be a bit more cautious about hitting the "SEND" or "POST" button before I was sure that my OWN post was free of spelling errors.

But again, thanks for YOUR proof reading. I guess there will come a day in my life when I can't find anything else to do but use those errors to try and create an aire of invincibility, too.

Maybe the rivers in Minnesota aren't the only thing that are above flood stage, Hans?

Steve

>Vic Clark probably also thought that automobiles would get
>faster and more efficient thus obsoleting the 1982 models.

He was an electrical engineer and was concerned about hams
knowing the basics, knowing full well what would happen if we
ever got to the point where they didn't.

>What he was predicting was scientific progress.

No, what he was warning against was easing of requirements, which
is what this issue is about.

>While all other forms of electronic communications were getting
>easier and more accessible, freezing the amateur radio
>requirements would have been a sure way to sound the ARS death
>knell and bury it in the sands of time. Why not just require

You would have been happy about that, I'm sure, Cecil. After all,
you've said there's no longer any need for hams to know basic
electronics. Just basically rules, regulations, and of
course...safety.
